The University of Western Ontario

Outline

- **Context**
 - Knowledge economy
 - Revolution of expectations
 - Labour market outcomes
 - Persistent class inequalities
- **Data & Methodology**
 - YITS
- **Analysis and Findings**
- **Other related research**

Context: Knowledge Economy

- Increase in jobs requiring post-secondary credentials
- Pervasive public discourse: need for higher education
- Human capital central to education and labour market policies

Labour Market Outcomes

Unemployment

Western

Unemployment rates of population aged 15 and over, by level of education, Canada, 1990 to 2006

	All levels	Less than high school ¹	High school ²	College or trade ³	University ⁴
			percentage		
1990	8.1	12.4	7.8	6.3	3.8
1991	10.3	15.4	10.2	8.2	4.9
1992	11.2	17.0	10.9	9.3	5.5
1993	11.4	17.0	11.6	9.6	5.8
1994	10.4	16.1	10.2	9.0	5.4
1995	9.5	15.1	9.6	7.9	5.0
1996	9.6	15.4	9.8	8.1	5.2
1997	9.1	15.7	9.2	7.4	4.8
1998	8.3	14.5	8.6	6.5	4.3
1999	7.6	13.5	7.8	5.9	4.2
2000	6.8	12.5	7.0	5.2	3.9
2001	7.2	13.1	7.2	5.8	4.6
2002	7.7	13.9	7.8	5.9	5.0
2003	7.6	13.8	7.8	5.8	5.4
2004	7.2	13.2	7.5	5.6	4.9
2005	6.8	12.6	7.1	5.3	4.6
2006	6.3	12.3	6.5	5.1	4.0

Education =
lower chances
of un-
employment

Over time:
University
graduates
less
dependent on
boom-bust
cycles

1. Includes no education or education below high school graduation.
2. Includes high school graduation or some postsecondary education (not completed).
3. Includes trade certificate or diploma from a vocational school or apprenticeship training; non-university certificate or diploma from a community college, CEGEP, school of nursing and similar programs at this level; university certificate below bachelor's level.
4. Includes bachelor's degree; university degree or certificate above bachelor's degree.

Notes: The data for 1995 to 1998 have been revised and are different from those previously published in 2005 PCEIP Report (Statistics Canada and Council of Ministers of Education, Canada, 2005, *Education indicators in Canada: Report of the Pan-Canadian Education Indicators Program*, Catalogue no. 81-582-XIE, Ottawa).

The unemployment rate is based on a monthly average from January to December.

Context

University & Social Class

Some examples

- Access
 - E.g., Andres et al. 1999; Anisef et al. 2000; Krahn (& Lowe)
- Expectations
 - E.g., Lehmann 2004; 2005
- Experiences
 - E.g., Lehmann 2005;; Granfield 1991; Aries & Seider 2005;
- Dropout
 - Evidence in UK and US data (e.g., Walpole 2003; Quinn 2004)
 - Not in Canadian data (e.g., Grayson 1997; Statistics Canada 2000: School Leavers Follow-up Survey; Krahn 2004)

Context

University & Social Class

Theoretical

- Rational Choice
 - Goldthorpe (1996)
 - Relatively high investment with uncertain outcomes
- Cultural Reproduction
 - Bourdieu
 - Cultural capital
 - Habitus & dislocation

Context Tinto's Model

Figure 1
A conceptual Schema for Dropout from College

Research Questions

Western

- Is having university-educated parents or not (i.e., first-generation student status) a significant direct factor in university attrition in Canada?
- Are students with high levels of social and academic integration less likely to drop out of university?
- Are students with clear career goals less likely to drop out of university?
- Does first-generation status (i.e., first in family at university) mediate the various predictors of university dropout in a way that students with parents who do not have university degrees become less socially and academically integrated and are therefore more likely to drop out of university?
- What is the role of gender?
- What is the role of employment during university?

Data: YITS

Western

- Youth in Transition Survey (YITS).
- Longitudinal survey jointly developed by Human Resources and Skills Development Canada (HRSDC) and Statistics Canada.
- Cycle 1: 18-20 cohort
 - Administered between January and April of 2000
- Sampling frame: 29,164 households across Canada,
 - Drawn from a probability-based sample of the population and linked to Statistic Canada's Labour Force Survey (LFS).
 - In total, 23,592 individuals participated in the survey, for an overall response rate of 81 percent
- Sample size for our analyses reduced to 3819
 - Youth who were or had been enrolled at university at the time of data collection.
 - Approx. 16% of the overall sample size of the YITS survey.
 - Of this sub-sample, 213 (or 5.6%) had left university without graduating at the time of data collection.

Data: YITS

- **Dependent variable:**
 - Dropout status
 - “Graduate/continuer” vs. “Leaver”
- **Independent variables**
 - Gender
 - Parental educational attainment
 - Determines FG status
 - Social integration at university
 - Index created from questions re: friendships, belonging, etc.
 - Academic integration at university
 - Index created from questions re: attendance, deadlines, homework, comprehension of material, etc.
 - Clarity of future career goals
 - Index created from questions re: career plans, seeing connections between university and work, etc.
 - Hours worked off campus during academic year
 - Academic and social integration during high school
 - Indices created from questions re: friendships, involvement, relationships with teachers, enjoying learning, etc.

Results

Table 1. Percentage of university students in sample who left university without graduating, by various characteristics (YITS, 18-20 cohort, cycle 1)

	%
Total	5.1
Parent's Education	
Below University (both parents)	5.9
University degree (at least one parent)	4.2
Social Integration in High School	
Low	5.9
High	4.1
Academic Integration in High School	
Low	5.3
High	5.0
Academic Integration at University	
Low	6.8
High	3.5
Social Integration at University

Summary of Findings

Western

- First-generation status
 - Percentage differences expected
 - Higher percentage of FG dropouts
 - FG less integrated
 - FG more likely to work
 - But also: FG more likely to have clear career goals
 - Regression results show FG status NOT significant predictor of dropping out
- What predicts dropping out?
 - Academic integration (lowers risk)
 - Having clear career goals (lowers risk)
 - Working during term (increases risk)
 - Being a man (increases risk)

Discussion

Western

- **FG still an important consideration**
 - Importance of work during academic year
 - Affects FG and low SES students
- **Socialization experiences in high school**
 - Are those at university already different from other low SES high school students?
 - Role of streaming and mentoring at HS for university access
- **Reasons for dropping out**
 - Voluntary vs. “forced”
 - Timing of dropout decision
- **Dropout vs. stopout**
 - Who returns to university?
 - Who returns to other PSE?

How does this relate to other research?

Western

Qualitative studies (e.g., Lehmann 2007; Aries & Seider 2005; Quinn 2004)

- Social background does play an important role in how students experience university
 - Crucial in forming dispositions to either persist or drop out
 - Access to resources (e.g., tutors, money)
- First-generations students
 - More likely to leave early, despite strong academic achievement
 - Not *feeling* university
 - Not fitting in
 - Not being able to relate
 - Discover *true* vocational nature
- Importance of habitus (Bourdieu)
 - Evidence of habitus dislocation and habitus-based self-censorship (Bourdieu)

How does this relate to other research?

Western

More recent YITS analysis; using data from first 4 cycles (age 24-26 in Dec 2005)

Shaienks, D., & Gluszynski, T. (2009). *Education and Labour Market Transitions in Young Adulthood; Catalogue no. 81-595-M — No. 075*. Ottawa: Statistics Canada.

- The following factors were found to be related to dropping out
 - Being male (increases risk)
 - Being 26+ (increases risk)
 - Have parents with incomplete PSE (increases risk)
 - NOTE: parents with low levels of educational attainment not significant)
 - Few homework hours in HS (increases risk)
 - High grades in HS (80+) (lowers risk)
- Did not control for employment during studies or integration/engagement at university

Policy Implications

Western

- Need to better understand reasons for dropping out to develop preventive programs
 - Dropout/stopout
 - Timing
 - Financial reasons
 - Integration
 - Academic
- Needs-based financial support for low SES, FG students
 - Importance of work in analysis
 - Academically relevant employment opportunities?
- Research at primary and secondary education levels
- Renew discussion on range of PSE alternatives
 - University vs. community college vs. apprenticeship and vocational education
