ABSTRACT

The thesis is a new edition of the "Soul's Address to the Body," a poem from the period of transition between Old and Middle English that exists uniquely in Worcester Cathedral MS. F. 174. The MS. dates from either the late twelfth or early thirteenth century; the "Soul's Address" itself is generally dated to the early part of the twelfth century. The MS. presents many problems for the editor. It was disassembled, probably late in the medieval period, and its leaves were trimmed and used as stiffening in another bookbinding. It was not reassembled until the early nineteenth century.

The introductory portion of the edition begins with a description of the MS. that concentrates particularly on the last four leaves, ff. 63-66, which contain the "Soul's Address." The discussion of language which follows is divided into six parts: Phonemic-Graphemic Correspondences, Non-alphabetic Graphemes, Morphemic-Graphemic Correspondences, Syntax, Rhyming and Assonant Lines, and Dialect and Date/

A section on prosody investigates the relation of the poem to both Old English verse and rhythmical prose and concludes with a discussion of rhyming lines in the work. After a brief discussion of the poet's style, the introductory material concludes with a long-investigation of the relation of the "Soul's Address" to other 'body and soul' works. It is argued in this section that the current order of the poetic fragments is, in fact, not the most probable order of what remains.
Rather, the repositioning of f. 66 between ff. 63 and 64, a change not denied by the facts of the MS., strengthens the poem's internal structure immeasurably and reveals that it is more closely related to the structures of other 'body and soul' poems than has hitherto been noticed.

The alternative order of the text is the one printed. Full explanatory notes follow in which all the previous suggestions for the filling of the various lacunae in the work are considered. The edition concludes with a glossary which, except for a handful of function words, contains a complete record of all the forms in the poem.
PREFACE

The Worcester "Soul's Address to the Body" is a poem whose significance extends well beyond its intrinsic merits as a work of literature. Relatively few English works survive from the era it represents, the period of transition between Old and Middle English, and only a handful of these are written in verse. Also, the "Soul's Address" belongs to a large group of works written at various times throughout the Middle Ages that take as their theme the conflict between body and soul. It is the longest poem of this kind in English; it is the longest verse address of a soul to its body in any language. For linguistic, literary, and thematic reasons, therefore, the "Soul's Address" ought to interest scholars, and this edition of the poem with its accompanying apparatus and full treatment of these matters should help to increase understanding and appreciation of it. Further, the "Soul's Address" survives in a single, fragmentary copy preserved in Worcester Cathedral, a copy whose arrangement, it will be argued in the following pages, is probably faulty. The reorganization of the remaining fragments proposed in the introductory section of the edition and the reordered version of the text printed thereafter should serve to enhance considerably the poem's reputation as a work of art and bring about a reassessment of its position in English literary history and in the canon of "body and soul" literature.
I would like to thank my advisors, Prof. Constance B. Hieatt and Prof. Peter Auksi, for the many helpful suggestions they made during the preparation of this work. I would like to acknowledge the following people for their assistance: Prof. Angus Cameron and the staff of the Dictionary of Old English Project at the University of Toronto; The Reverend Canon J. Fenwick of Worcester Cathedral; and Mr. B. Benedicksson of Birmingham University. The support and understanding of friends and family have also been invaluable to me, especially that of my wife Elaine.

I

The Manuscript.

The fragments that remain of the "Soul's Address to the Body" are found on folios 53\textsuperscript{r}-66\textsuperscript{r} of Worcester Cathedral MS. F. 174 currently located in the Chapter Library of Worcester Cathedral. This manuscript also contains a version of Ælfric's Grammar and Glossary, ff. 1-63\textsuperscript{r},\textsuperscript{1} and a short fragment of rhythmical prose on the state of learning in England beginning "Sanctus Beda was iiboren her," f. 63\textsuperscript{r}.\textsuperscript{2}

i Physical Characteristics.

1. Size and Quality of the Sheets. The sheets used in F. 174 were of various sizes and shapes when the text was written and the MS. compiled. E.g., f. 19, which has survived intact, is 198 x 185 mm. and contains twenty-three lines of text; f. 12, which is also intact, measures 275 x 175 mm. with thirty-one lines of text; f. 59, on the other hand, has a writing area that measures about 215 mm. across---i.e., significantly larger than either ff. 12 or 19---despite its having been trimmed along one of its edges. Folios 63-66, which contain the "Soul's Address," have each been trimmed across the top and down their free (as opposed to bound) edge. Folio 63\textsuperscript{v} in its current state contains twenty-seven lines of writing and a writing area 205 mm. in width at its largest point; f. 64\textsuperscript{v} has thirty lines, the width of the writing space is approximately 193 mm.; f. 64\textsuperscript{r}, thirty lines as well, 195-200 mm.;
f. 65\textsuperscript{v}, thirty lines, about 195 mm.; f. 65\textsuperscript{v}, twenty-nine lines, about 200 mm.; f. 66\textsuperscript{v}, twenty-eight lines, 190 mm. at the top broadening to 200 mm. at the bottom; f. 66\textsuperscript{v}, thirty lines, 187 mm. at the top, 197 mm. near the bottom.

Given the abuse they have received, the extant leaves of F. 174 have survived remarkably well, particularly those toward the end of the MS. where the poetical leaves are found. Nevertheless, ff. 63-66 are thin and fragile; yellowish in colour, and somewhat translucent. A number of small holes and the occasional tear are present— the latter often the result of ruling; also, on f.64, two creases have occurred along the free edge of the leaf at some time after the writing had been completed.

2. **Foliation.** In the 19th-century the leaves were numbered 1 through 66 in the upper-right-hand corner of the recto side. Because of trimming at the top of some leaves, these numbers sometimes appear between the lines of the text.

3. **Gatherings.** In its original form the MS. would appear to have been quarto, the leaves arranged in each gathering so that hair side faced hair, flesh side faced flesh, though in some gatherings, if they were indeed quarto, the recto of the first leaf is a hair side, in others, a flesh side. Ker is of the opinion that f. 1 and the misplaced f. 10 are a bifolium and that the six leaves are missing that were originally between them.\footnote{This would appear to be true: f. 1\textsuperscript{v} ends on p. 8 of Zupitza's edition of Ælfric's Grammar. f. 10\textsuperscript{r} begins at the top of p. 31, and, on the average, one folio of the MS. corresponds to about four pages in Zupitza. It is also assumed by Ker that Ælfric's...}
preface to the Grammar, pp. 1-3 of Zupitza, was never included in this copy; Floyer and Hamilton suggest, however, that two leaves are missing from before current f. 1. One might assume, then, an original collation of I (ff. 1 and 10) wants 2-7, II (ff. 2-9), III-IX (ff. 11-66), but the subsequent damage to the MS. makes certainty impossible. See I iii History, pp. 4-10.

4. Binding. The MS. is currently in a nineteenth-century binding. Each folio is interleaved with paper.

ii The Scribe

1. Script. The MS. is considered to be wholly the work of an anonymous scribe whose distinctive, quavering script has been named by scholars the "tremulous hand." The letters tend to slope backwards, the strokes are thick rather than fine, and the size of the letters can change quite substantially from one leaf to the next, though on the whole they are fairly large. The "tremulous hand" is found in a number of mss. almost always in glasses, and it is clear from their provenance that he was working at Worcester, the present location of F. 174. Further, Ker has shown that additions in the "tremulous hand" to a marginal index in Bodleian MS. Hatton 114, f. 10, probably date from the second quarter of the thirteenth century.

This is the only extant MS in which the "tremulous hand" is the primary script, and it is interesting to note how variable the hand can be. Of particular interest is f. 1, where the script is characterized by smaller letters produced with finer strokes than elsewhere in the MS., especially in the verse sections, ff. 63-66. On f. 1 occurs
the letter form ɔ, e.g., habbea, l. 10 of f. 1;12 it is not usually
found in the work of the "tremulous hand" but does appear in the
facsimile of the Nicene Creed reproduced by Crawford.13 Ker mistakenly
says ɔ does not occur in F. 174.14 Also, Carolingian ɡ on f. 1 has a
tail which ends with a downward turn, e.g., englisc, l. 12: of f. 1;15
in the verse sections the tail of caroline ɡ turns upward to the line
and joins with the body of the letter; it resembles a lopsided 8.

2. Ruling. The MS. is ruled with a pencil. There are no vertical
lines demarcating margins, though the scribe left a 5-10 mm. margin on
the left-hand side of each leaf, recto and verso. It would appear
from ff. 57-58, from which, uncharacteristically, the bound edges have
been trimmed, that the scribe used short, ink strokes placed along the
free edge of each leaf as a guide in drawing the horizontal lines.
These lines are drawn right across the page from one edge to the other.
Long lines, as opposed to columns, is an old-fashioned feature in an
early thirteenth-century ms, according to Ker.16

3. Spacing. As mentioned above, the size of writing in works in
the "tremulous hand" can vary from leaf to leaf. On the average, the
height of the minims on the poetical leaves of F. 174 is 4 mm.; that of
the ascenders and descenders, 2-3 mm. The height of the interlinear
space varies from 1-3 mm.

iii History

The MS. was written at Worcester and apparently has always remained
there. It is the only ms containing work of the Worcester scribe with
the "tremulous hand" that has remained at its place of origin. Patrick
Young, who compiled the earliest extant catalogue of the Chapter Library in 1622-23, does not mention it, however, because it had been disassembled and used in the binding of another ms in the Library. Ker suspects this disassembly took place in medieval times. It does seem probable that it took place before the visit of Archbishop Parker, c. 1565, for it is likely he would have taken the work from the Library along with other Anglo-Saxon mss, even though it was probably from the outset a rather plain, undistinguished piece of work compared to other productions of the Worcester scriptorium. Sir Thomas Phillipps, a nineteenth-century antiquarian, discovered the work "in the covers of an old book of which they, with some other fragments, constituted the sole stiffening," and subsequently published the first edition of the "Soul's Address" along with portions of the Ælfric material and the "Sanctus Beda" fragment in 1838. The reassembled MS. apparently was misplaced again and not rediscovered until 1879, when Zupitza found it while searching for all the extant copies of Ælfric's Grammar and Glossary in preparation for his edition of that work. Floyer and Hamilton in their 1906 catalogue of the Chapter Library state that the leaves of the MS., after being pasted together, were used "to form covers for a book in the Cathedral archives." However, Phillipps' brief description seems quite unambiguous: they were used as stiffening inside the covers of another book and not as covers themselves. Ker notes that they were used in binding.

Though the leaves of the MS. have survived quite well, some damage has occurred. As a result of leaves being pasted together, the offset of letters from other leaves is found throughout the MS. Perhaps as a result of attempts at cleaning carried out by Phillipps, the ink in some
words is very faded. More serious is the trimming of the top edge and
the free edge of most of the leaves. (Some were also cut along the
bottom; three were trimmed along the bound edge rather than the free
edge; a few were cut in two; some were left uncut.) Folios 63-66 have
been trimmed along the top and down the free edge. It is impossible to
ascertain exactly how much is missing from the leaves due to trimming at
the top. Five to seven lines are missing from the Glossary at the top
of f. 63\textsuperscript{v}. We might, therefore, assume a similar amount of text has
been lost from f. 63\textsuperscript{v} where the "Soul's Address" begins. But whether or
not this space contained a conclusion to the "Sanctus Beda" passage of
f. 63\textsuperscript{v} cannot be determined. Also, because of the varying sizes of the
leaves, one can only estimate what is missing from the tops of ff. 64-66
to be about five lines of text, give or take two or three lines, i.e.,
between two and eight lines.

The previous editors state that only one or two letters are missing
from each line of writing because of the trimming of each leaf's free
edge.\textsuperscript{24} However, because of the lack of uniformity in the size of the
sheets both before and after the MS. was disassembled, it is impossible
to make such a general statement. The scribe left a fairly even left-
hand margin of 5-10 mm. on each page but no right-hand margin; therefore,
since the free edge of each leaf was trimmed, it is clear that more
text--the width of the margin--is missing on the recto side. The best
method for estimating how much has been lost from each leaf is to find
other occurrences of a word that is almost certainly the one missing
from the beginning or end of a given line and to measure the relevant
portion thereof. This method yields the following results:

f. 63\textsuperscript{v}, \textit{fleab} would seem to be the word missing in l. A37. It has
an estimated length of 15 mm.

f. 64⁷, bunched is almost certainly required in l. D(B)38. The missing bun probably measured about 14 mm.

f. 64⁵, the last three letters of what must be wurmes, l. E(C)43, probably measured 11-12 mm.

f. 65⁷, licame plus a point, l. F(D)25, beornen, l. F(D)14, and faderes, l. F(D)23, all seem to be missing about 19 mm. of writing apiece.

f. 65⁵, deope, which is almost certainly the word missing in l. G(E)8, probably measured about 17 mm.

f. 66⁷, the missing portions of both sunfule, l. B(F)9, and makunge, l. B(F)41, probably measured about 17-18 mm.

f. 66⁵, tunge, l. C(G)15, measured 16-17 mm.

With the exception of portions of f. 64, there is room for more than one or two letters to be missing from each line of the poetical leaves. However, the figures are approximations. The width of the margin varies from 5-10 mm.; the scribe did not always write to the right-hand edge of the page, though generally he comes very close to it; the size of the writing can vary somewhat from leaf to leaf.

The disassembly of F. 174 coupled with the trimming of its leaves has created another problem for the editor of the "Soul's Address." Because there are other extant versions of Ælfric's Grammar and Glossary, the order of the leaves in that part of the MS., i.e., ff. 1-63⁷, is easy to establish. The poetical leaves present a more difficult task: there is no source or analogue sufficiently close to the "Soul's Address" to serve as a clear-cut pattern, and further, the trimming of the top of each leaf has resulted in the loss of material that might have
allowed the editor to join the fragments together in the correct order on the basis of continuity of subject matter. It is clear that Fragment A on f. 63v is the first of the seven fragments; it occurs on the verso side of the leaf on which the Glossary ends. It also seems clear that on the remaining three leaves, ff. 64-66, recto can be distinguished from verso. The markings that were used as guides in the ruling of the leaves are found on ff. 57-58, on which the bound sides were trimmed. Since these markings cannot be found on ff. 64-66, the free edge must have been trimmed on each of them, and it follows that, if any significant trimming took place, the left-hand margin will occur only on the recto side of the leaf. It thus seems evident that in the present arrangement, recto has been correctly distinguished from verso.

It is likely that Sir Thomas Phillipps established the present order of the MS. One error has been made in the Grammar portion of the MS. (f. 10 should, in fact, be f. 2), and it is the contention of this editor that Phillipps made another error in the ordering of the poetical leaves. The only previous editor who addresses the question of order is Buchholz, who argues that the continuity of subject matter is sufficient to link the bottom of f. 64v with the top of f. 65r. He offers no explanation for the placement of f. 66, however.25 Neither Haufe, who worked before Buchholz, nor Ricciardi, who worked after him, concern themselves with the question; all three, along with Singer and Hall, accept the order established by Phillipps.26 While Buchholz's observation on the continuity of subject matter between ff. 64v and 65r is well taken, the present order of the leaves does not, in fact, rest on an examination of the poem's literary qualities. Rather, it is probable that Phillipps settled on the present arrangement in order to
preserve the structure of what he took to be the last half of a quarto gathering in which hair side faced hair and flesh side faced flesh:

f. 63⁰ is a flesh side, 63⁠, hair; f. 64⁰ is a hair side, 64⁠, flesh;

f. 65⁰, flesh, 65⁠, hair; f. 66⁰, hair, 66⁠, flesh.

However, we cannot in fact, be sure that we are dealing with the last half of a quarto gathering at this point. Given the irregular size of the sheets of the MS. in its original form, it is clear that the work was not a fine production of the scriptorium; Mr. B. Benediktsson of Birmingham University believes it may well have been, quite literally, the scribe's scrapbook, an assembly of discarded sheets put together for the scribe's own interests. Hall remarks that the writing of the poetical leaves is "less carefully executed" than that of the Grammar and Glossary, an observation that is borne out by examination of the MS.

It is possible that less care was taken in the assembly of these leaves as well, i.e., they may have been tacked on to the main work at some later date. We cannot know, in other words, if we are dealing with a quarto gathering at this point in the MS. (Indeed, because of the damage, we cannot be absolutely sure of the size of the gatherings at any point in the MS.) Further, we cannot know whether or not we are dealing with consecutive leaves at the end of the MS., whatever the order. Six leaves are in all likelihood missing after f. 1; more leaves may well be missing before f. 1; and it can be argued that at least one leaf is missing from the end of the MS., regardless of the order in which ff. 64-66 are placed. It is not inconceivable that one or more leaves are missing from among ff. 63-66.

Given the structural shortcomings of the "Soul's Address" in its present form, there seems scant justification in insisting upon the
preservation of the present order of the leaves on which it occurs simply because that order preserves an arrangement in which hair side faces hair and flesh side, flesh. It is more reasonable and more profitable to treat the fragments individually on the basis of what is actually being said in each of them in order to arrive at the most probable and the most satisfactory arrangement of what remains.
II

Language

The importance of the Worcester "Soul's Address" in English literary history rests primarily on its transitional position between the Old and Middle English periods. The discussion of the poem's language which follows reflects this fact. The original version of the "Soul's Address," though admittedly a late example, was very much an Old English work; its vocabulary, e.g., was almost wholly Old English in origin.

The treatment of its language, therefore, focuses on the connections of the work with late Old English language as it is generally understood in order to fix the poem firmly in that context. However, the one copy of the poem that remains (written perhaps a century later than the original), contains many orthographic forms that complicate the relation to Old English. Some of these forms obscure this relation; others reveal linguistic transformations of Old English forms and indicate developments in the language of either the poet or the scribe. Because of this situation, certain methods have been adopted that are not usually employed in editions of Old and Middle English poetry: specifically, more emphasis is placed on the graphemic representations of both phonology and morphology. Also, because of the unusual nature of the work, in linguistic terms, the discussion of language is somewhat more extensive than is currently fashionable in editions of Old and Middle English poetry. It is divided into six parts:
The "Phonemic-Graphemic Correspondences" present a list of late Old English phonemes and the graphemes used to represent them, along with pertinent phonological statements and remarks on exceptional forms, where there are any. This part is subdivided into treatments of Stressed Vowels, Foreign Words, Low-Stressed and Unstressed Vowels, and Consonants.

"Non-alphabetic Graphemes," i.e., Punctuation Graphs, Tachygraphs, and Word Signs.

The "Morphemic-Graphemic Correspondences" present the various graphemic representations of the signs used to designate the parts of speech, with special mention of any atypical forms.

"Syntax" provides a categorized discussion of syntactical usage in the poem from the perspective of Old English usage.

The brief discussion of "Rhyming and Assonant Lines" investigates the linguistic information, primarily phonological, that can be derived from these lines.

"Dialect and Date" is a summary statement with some indication of where the work can be fixed in place and time.

A thorough perusal of the following material will provide the reader with a comprehensive view of the relation of the language of the "Soul's Address" to late Old English. It will also give the specialist a precise idea of the forms which specific aspects of the language take in the work. Parts i and ii in particular will provide those who are interested in the phonemic-graphemic and morphemic-graphemic fits of Middle English mss with an idea of what they can expect in the "Soul's Address," in Worcester Cathedral MS. F. 174, and in other examples of
work in the "tremulous hand." The discussion of the language here is complemented by the complete Glossary that follows the Explanatory Notes at the end of the edition.

The following symbols are used in the discussion of language:

1. // enclose phonemes.
2. <> enclose graphemes.
3. { } enclose morphemes.
4. > indicates "becomes."
5. < indicates "derives from."
6. : indicates length, i.e., a: is long a.

The authors whose works are referred to by page or item number in the discussion of language are:

i. Phonemic-Graphemic Correspondences

A. Stressed Vowels

a. Simple Vowels

1. OE /i/ is written <i>, e.g., lif, l. A4, licame, l. A11.
   (a) /i>/y/ written <u> in present forms of the verb willen, e.g.,
       nullep, l. A38, wullep, l. E(C)35 (Jordan 36 rem. 2); /i/ remains
       /i/ in the noun wille, however; e.g., willen, l. D(B)33, wille,
       l. E(C)11.
   (b) The occurrence of <i> in chirche, l. *G(E)25*, is surprising;
       see II i 7(b).

2. OE /e/ is primarily written <e>, e.g., bedde, l. A13, brekep,
   l. E(C)44.
   (a) siggen, l. B(F)7, beside seggen, l. G(E)42, is a common
       western development. (Jordan 34 rem. 1).
   (b) wrænce, l. C(G)48, may show preservation of the æ-step in the
       i-umlaut of /æ/ before nasals (Jordan 133 rem. 1), but this is
       primarily a southeastern feature (Campbell 193(d)). It is
       probably a back spelling.
   (c) OE /æ/ is written <æ> between w and l in weolen, l. D(B)16,
       weole, l. E(G)8, 14, 36, a WML feature. (Jordan 33 rem. 3), but <æ>
       in wel, l. D(B)9, l. G(E)21. <æ> in this case is probably evidence
       of back mutation; cf. freome, l. A37, and feole, l. C(G)11 and
       C(G)18 (Campbell 210(1)).

3. OE /a/ is written either <æ> or <e>, e.g., wrecche, l. A29, wrecche,
   l. A41, hæfđest, l. F(D)27, hæwdest, l. E(C)14, reste, l. E(C)24.
(a) This variation probably indicates a narrowing of OE /æ/ to /ɛ/ with the retention of some traditional spellings, i.e., <æ> (Jordan 32). This development is indicative of the southwestern (and Kentish) dialects but was not impossible in the WML as well.
(b) Following /w/, OE /a:/ is written <a>, e.g., water, l. F(D)12, water, l. B(F)39, and was, the usual form of this common low-stress word, though was, l. G(E)27, and nes, l. F(D)19 and 20, occur also (Jordan 32.2).
(c) messa, l. D(B)23, is probably a French loanword and not from OE messa (Jordan·32 rem.1).

4. OE /æ/ is written <o> before nasals where it had become /ə/, a typical WML development (Jordan 30); otherwise it appears as <a> (Jordan 29).
(a) The retention of <a> in licame, l. A11, and andweorke, l. B(F)42, may result from reduced stress.
(b) deages, l. A40, beside probably low-stressed lifdawes, l. A14, shows a more fronted sound closer to /æ/ (Jordan 32 rem. 1), perhaps by analogy with the OE singular deæ; see II.39(a). <æ> in goldfaten, l. D(B)7, which is possibly low-stressed, is probably due to analogy (Campbell 254 fn. 1).

5. OE /o/ for the most part is written <o>.
(a) In words previously effected by i-umlaut, OE /o/ tends to be written <eo>, e.g., seoruhfulde, l. A8, seorwen, l. A27, neose, l. A18 (Jordan 35 rem. 3), but <o> is retained in sorhfulde, l. F(D)25 (also sorhliche, omitted in this edition from l. A27).
Feorpsib, l. A27, may have resulted from the <o>/<eo> variation of the OE diphthong /œ:/, i.e., <eo>, before lengthening groups
beginning with <r>.

(b) <u> in iwurben, 1. B(F)46, is probably analogical in origin.

6. OE /u/ is written <u>, e.g., tunge, 1. A19, cumep, 1. A10 (Jordan 37).

(a) <o> in iworgen, 1. B(F)45, is probably analogical in origin.

7. OE /y/, though written <u>, is still a separate phoneme, a WML feature (Jordan 42), e.g., wurdes, 1. D(B)41, cumne, 1. F(D)20.

(a) Following /j/, <e> occurs in get, 1. C(G)7, E(C)2, etc.,  
    gerde, 1. A33, bizete, 1. E(C)13, <e> in given, 1. D(B)21, <oe> 
    in geodede, 1. C(G)21.

(b) Exceptional is chirche, 1. G(E)25, where one would expect <u> 
    in the WML owing to the rounding influence of the following palatal 
    (Jordan 42.1, 43.2). synne, 1. B(F)33, beside sunne, 11. D(B)18,  
    22, etc., is probably an archaic form.

8. OE /i:/ is written <i> and in two places <ii>, e.g., bin, 1. D(B)8,  
etc., beside biin, 1. G(E)38, liep, 1. A36, beside liip, 1. E(C)31.  
(a) Rounding of /i:/ to /y:/ is apparent in the variation of  
    <i> and <u> spellings in hwile, 1. D(B)17, and hwule, 1. D(B)1, and  
    in swupe, 11. A39 and D(B)11 (Jordan 52 rem. 2).

9. OE /e:/ is written <e>, e.g., fenge, 1. D(B)29, icwemdest, 1. D(B)42.  
(a) weopinde, 1. A10, reveals rounding between labials (Jordan  
    51 rem. 2).

10. OE /æ:/ from Proto-Germanic /æ:/ and OE /æ:/, the i-umlaut early OE  
/æ:/, are both written either <æ> or <e>, e.g., berof, 1. D(B)33,  
beron, 1. F(D)11, grede, 1. D(B)13, gredi, 1. F(D)33, bedeled,  
1. D(B)16, bedeled, 1. E(C)32, arerofe, 1. G(E)12, arerofe,  
1. F(D)45. It would appear that /æ:/ of either derivation had
narrowed to /ɛ:/ or was in the process of doing so (Jordan 47).
(a) Late OE /æ/, the monophthongization of OE /æː/, is primarily
written <ea> with some variations in <æ>. The only forms in <e>
are ee, 1. F(D)12, birefædæ, 1. C(G)12, beside berfræfædest, 1.
G(E)20, and eæn, 1. A42; beside eæn, 1. A17, where palatal
influence must be considered; see II i 19(d). It would appear that
/æ:/ did not immediately narrow to /ɛ:/, perhaps because it
was a more central allophone than the other varieties of /æ:/.
The number of <æ> spellings attests to the early date of the poem: the
monophthongization of /æː/ is generally placed in the eleventh
century. <ea> in bileaen, 1. F(D)6, is a back spelling, however.
(b) /æː/ is written <æ> in hwar, 11. D(B)4,5,7,9,10, probably
because of the preceding /w/. See II i 3(b).

11. OE /a:/ is written either <a> or <o>, the dominance of the latter
indicates a movement to /oː/, e.g., ban, 1. A21, bones, 1. F(D)25,
lac, 1. D(B)25, loc, 1. D(B)24, ashtæ, 1. G(E)2, ohtæst, 1. E(C)8
(Jordan 44). <oa> occurs twice: woænæng, 1. A15, woænæp, 1. A25
(cf. wænæp, 1. A12); <eo> occurs in weœwæ, 1. A7, greœnæng, 1. A15,
greœnæp, 1. A25, as well as in the npm. demonstrative pronoun, beo
beside n pf. ba, npm. ba, be, and perhaps beo; see II lii 18.
(a) In 11. A15 and 25, greœnæng/woænæng and greœnæp/woænæp
apparently are meant to rhyme.

12. OE /øː/ is written <o>, e.g., moder, 1. A25, flore. 1. A30
(Jordan 33).

13. OE /uː/ is written <u>, e.g., hœfæ ðæ, D(B)15, fælæ, 1. E(C)41
(Jordan 55).

14. OE /uː/ remains a separate phoneme but is written <u>, e.g.,
betuned, 1. E(C)17, fure, 1. F(D)14 (Jordan 42).

(a) Exceptional is hwí, 1. F(D)22, beside hwúí, 1. D(B)17; <ui>
is a common variant spelling for /y:/ in ME (Jordan 42.2).

b. Diphthongs

15. OE /æ/ written <ea>  a. Before r-combinations; it continues to
be written <ae>, though forms with <e> and <a> also occur, e.g.,
bearn, 1. A6, hearpe, 1. G(E)22, markes, 1. D(B)6, permes, 1. E(C)47,
imerked, 1. C(G)39; <æ> occurs once, in armes, 1. E(C)43.
b. Before l-combinations, other than -ld, <æ> occurs, e.g., alle,
1. A2, walkep, 1. A12; before the lengthening group -ld, <æ> is the
rule, e.g., coldepe, 1. A21, ildede, 1. D(B)6, showing movement
of Anglian /æː/ >/ɔː/ in the Midlands (Jordan 61 rem. 1). Exceptional
is heldan, 1. E(C)35; see II i 17(b).
c. OE /æ:/ before h-combinations is written <ei>, in iseige, 11.
F(D)8 and 22, <æ> in waxen, 1. E(C)38, probably owing to the pre-
ceding /w/ (though it may be an Anglian form (Jordan 63)), and <au>
in bauh, 11. C(G)27 and 28, probably owing to reduced stress on OE
/æː:/ (Jordan 63 rem. 2).
d. Following palatals, OE /æ:/ is written <æ>, e.g., isceaf, 1.
B(F)35, <æ>, e.g., isceæftan, 1. A2, <æ>, e.g., schæl, 1. A9, and
<æ>, e.g., scæpe, 1. B(F)29, perhaps a result of IWS smoothing
(Campbell 312), beside scærpe, 1. B(F)25.
e. The i-umlaut of OE /æ:/ before r-combinations is written <e>,
e.g., scærep, 1. A18, biderman, 1. B(F)6, erming, 1. F(D)18
(Jordan 60). Before -ld, <æ> occurs in walde, 1. D(B)41, see
II i 17(b).
(a) It is generally accepted that by the 1OE period /æə/ had monophthongized to /æ/ which in turn moved toward /a/ after the eleventh century outside the WML (Jordan 58). It is curious that only three forms, wældæp, 1. D(B)41, possibly low stress ært,
1. D(B)16, and ærmes, 1. E(C)43, graphically attest to the a-step of this monophthongization. The spelling <æ> from the i-umlaut of /æə/ before r-combinations is predictable (Jordan 60) as is <æ> before l-combinations and <œ> before <ld> (Jordan 61) and <ei> before h-combinations (Jordan 63).

16. OE /æə/, written <œ>. a. Before r-combinations, <œ> is usually written, especially before lengthening groups, e.g., corpe,
1. E(C)5, beornen, 1. G(E)49. <œ> occurs in herborwen, 11. E(C)23 and F(D)3, and in beworpen, 1. F(D)13; <œ> occurs in werke,
1. F(D)30, probably a smoothed Anglian form (Jordan 66 rem. 1), beside andweorke, 1. B(F)42; <œ> occurs in wurpe, 1. B(F)45 (Jordan 66 rem. 3).
b. Before l-combinations, /æə/ is written <œ>, e.g., sulfen,
1. E(C)27, 1. B(F)23, suluen, 1. B(F)28, a southwestern form (Jordan 68 rem. ), though <œ> probably represents LMS /y/ in this word.
c. Before h-combinations, eOE /æə/ is written <œ>, e.g., rihete,
1. A35, rihet, 1. A38 (Jordan 69). It was probably already <œ> in 1OE owing to palatal umlaut.
d. Following palatals, it is primarily written <œ>, e.g., scortæp,
1. A19, scoldest, 1. E(C)28, but <œ> does occur in scæolde,
1. C(G)32, and scoldæst, 1. C(G)42.
e. The i-umlaut of OE /æə/ is /y/ and is written <œ>, e.g.,
afurved, 11. G(E)6 and 37 (Jordan 70).

(a) OE /eːə/ moved to /ʊ/ in the eleventh century and then gradually unrounded to /ɛ/ (Jordan 65). The <eo>/<oo> variations would indicate that monophthongization had occurred; the only form that might indicate unrounding, werke, 1. F(D)30, could, in fact, be a stray Anglian form (Jordan 66 rem. 1). The <u> in forms of "self" (Jordan 68 rem.), the <i> in the forms of "right" (Jordan 69), and the southwestern <u> in afurved (Jordan 70) are what one might expect.

17. a. OE /æːɔ/ is variously written <ea>, as it was in OE, and <æ>, though the former predominates, e.g., deade, 1. A40, dadan, 1. A42, seepe, 1. G(E)9, sepe, 1. D(B)40, dreampurles, 1. G(E)30, dreames, 1. G(E)26. The only forms with <e> are eo, 1. F(D)12, birefedest, 1. C(G)12, beside birefedest, 1. G(E)20, and egen, 1. A42, beside egen, 1. A17, see II i 10(a).

b. The i-umlaut of /æːɔ/ is primarily written <e>, a WML feature, e.g., alesed, 1. D(B)26, lefen, 1. F(D)22 (Jordan 83). The <i> and <u> in digalliche, 1. B(F)6, and huned, 1. F(D)47, are remnants of southwestern /iː/ and /yː/ (Jordan 83 rem. 1), though the former may, in fact, be a preserved WS literary form (Jordan 83 rem. 1).

(a) It would appear that, while /æː/ from /æːɔ/ had begun to narrow to /ɛː/ as had /æː/ from other sources (see II i 10 above), it was, perhaps, a more central allophone of /æː/.

(b) <æ> in weldeh, 1. D(B)41, and <e> in heldan, 1. E(C)35, may result from a confusion of lengthened OE /æː/ with /æːɔ/.

18. OE /eːə/ became the monophthong /ʊ/ and continues to be written <eo>, e.g., teore, 1. A20, deofel, 1. F(D)49 (Jordan 84). Also
see /ə/ before lengthening groups, II i 16a above.

(a) The i-umlaut of /eː/ apparently does not occur, e.g., neode,

'l. D(B)5, neowe, l. E(C)29.

19. OE short and long front vowels, including /æː/ and /eː/, preceding OE /j/ and /ç/, the palatal allophone of /x/, are generally written <ei>; /j/, spelled <j>, may or may not follow the diphthong, but /ç/, spelled <ch>, does, e.g., ileide, l. A4, unseihite, l. F(D)45. clei, l. A32, unheige, l. E(C)30, heie, l. C(G)40.

(a) OE /æː/+ /j/ is also written <æi>, e.g., isæid, l. C(G)19, beside iseid, l. D(B)30, æeh, l. A13, E(C)2, F(D)17, beside seih, l. F(D)26, G(E)3, 36, and 40, and <ai> once, domesdai, l. G(E)13, probably with reduced stress. deæes, l. A40, probably shows influence of OE singular daæ as well as a movement of the /j/ into the first syllable.

(b) /æː/+ /ç/ is written <æih>, e.g., wihte, l. D(B)13, bitziht, l. C(G)52, perhaps indicating some stability of /æː/.

(c) /æː+/j/ is written <æi> once, egen, l. A42, beside eisæn, l. A17, perhaps indicating a similarity between the vowels derived from OE /eː/ and /æː+/j/.

(d) Secondary palatalization is apparent in wieles, l. C(G)48, from OE /iː+/j/ (Jordan 90.3), but usually <i> is written, e.g., ile, l. B(F)21.

(e) The i-umlaut of OE /eː+/æ/ appears as <i> in besihi, l. A45.

(f) /eː+/j/, /ç/ shows early Anglian encroachment of /iː/ (Jordan 98), e.g., drian, l. D(B)36, beside dreiæen, l. C(G)6 and lihte, l. E(C)48.

20. a. OE back vowels before OE /w/, the voiced velar fricative written
\(<3\) which joined the /w/ phoneme in 10E, retain their OE spellings; it is primarily written \(<w\) though \(<u\> also occurs, e.g., lawe.

1. C(G)46, bowe, 1. E(C)4, owen, 1. E(C)45, reowliche, 1. E(C)7, beside reoulic, 1. B(F)19. See II i 45.

b. OE back vowels before the voiceless velar fricative written \(<3\> which had become an allophone of /x/, are primarily written \(<ou\> though \(<o\> does occur, e.g., wrouhte, 1. G(E)16, wrohten, 1. F(D)25, souhte, 1. D(B)19. See II i 46.

c. OE back vowels before /w/ in words in which syllable shift has occurred are written variously \(<ow\>, \(<ou\>, and \(<ouw\>, e.g., soule, 1. A4, beside sowle, 1. G(E)36, nouht, 1. D(B)33, beside nowiht, 1. F(D)19, toundar, 1. B(F)29.

B. Foreign Words

2i. a. Garsume, 11. E(C)12, C(G)13, and C(G)16, shows \(<\text{a}\> for what was probably Old Scandinavian /e/. See II i 3 above. The 10E form of this word is spelled with \(<\text{a}\>.

b. Iflut, 1. A30, shows /y/ written \(<\text{u}\> for Old Scandinavian /y/, an indication of southern provenance.32

c. Gete, 1. E(C)13, shows /\text{e}\:/ from Old Scandinavian /\text{a}\:/.. See II i 10 above.

d. Lowe, 1. E(C)30, shows /\text{o}\:/ from Old Scandinavian /\text{a}\:/.

e. Messe, 1. D(B)23, shows /e/ from Old French /e/.
C. Low-Stressed and Unstressed Vowels

22. Phonological levelling of unaccented vowels to schwa, written <e>, a characteristic feature of ME, is very much in evidence medially and finally, but many old spellings remain, particularly <a> when covered in inflectional endings. The presence of <æ> in the same position is quite possibly an example of archaistic spelling as Stanley believes, e.g., weolan, l. D(B)32, weolen, l. D(B)16, weolen, l. E(C)10, cuman, l. F(D)43, cumen, l. E(C)6. The <o> in stirope and the second <o> in goldfohne, l. E(C)3 and 4, indicate some retention of secondary stress, on the other hand (Jordan 24).

23. In the prefixes un-, for-, and a-, OE spelling is preserved; weakened an, l. E(C)18, occurs beside onean, l. E(C)6, (Jordan 144), but otherwise OE on- is preserved also. OE ge- is written <i> and OE be- varies between <be> and <bi>, e.g., bivunden, l. A16, beside bewunden, l. A27—both developments are eleventh-century characteristics (Jordan 144). Medial <i> is lost from chirche, l. G(E)25.

24. In the suffix -ing/-ung, variations may derive from OE (Campbell 383), e.g., greoning, woaning, l. A15, becnunge, l. G(E)27, prickunge, l. B(F)31; the -ende/-inde variation of the present participle ending is a southern characteristic (Jordan 135 rem. 2), e.g., spekinde, l. C(G)16,25, woniende, l. A10; -nesse is retained from OE; the OE adjectival suffix -lic is spelled <lic> in sellic, l. C(G)27, and, perhaps, resulic, l. B(F)19, <liche> in resowliche, l. F(D)9; adverbial -lice is spelled <liche> throughout; OE -ig had already moved to /i:/ in LOE and is written
<i> in every case but one, lutiʒ, 1. D(B)2, beside luti, 1. F(D)28.

25. Shortening in low-stressed words is graphically apparent in baun, 11. C(G)27 and 28, from OE beah (Jordan 150). Weakening is apparent in hore, 1. A39, 1. E(C)45, and ham, 11. D(B)21 and 38, from OE heora and heon after accent shift (Jordan 151). Heom, 11. A39 and D(B)12, also occurs. Also shortened is me "one," 1. F(D)10, beside mon, 1. A33.

26. Parasitizing is largely confined to cases where /r, l/ precede /w/, e.g., secrufulle, 1. A8, beside secruful, 1. A15.

D. Consonants

27. OE /p/ continues to be written <p> or <pp> medially. psalme, 11. C(G)19 and C(E)40, occurs beside salmsonge, 1. D(B)22, but alliteration would seem to indicate that this <p> was unpronounced.

28. OE /t/ remains unchanged and is written <t> or <tt> medially (Jordan 199). In brosfian, 1. G(E)9, /t/ is added between <s> and <n>.

29. OE /ç/ initially is written <ch>; medially, <c>, e.g., ece, 1. F(D)37, and <ch>, e.g., muchele, 1. A3, are found, but lengthened <cch> is most common, e.g., wrecche, 1. A29, also wrecce, 1. F(D)42 (Jordan 179); finally, in the adjectival suffix -lic, <c> is found, e.g. sellic, 1. C(G)27, but <che>, the adverbial suffix, can also appear with adjectives, e.g. reowliche, 1. F(D)9. The first person singular pronoun is spelled ic throughout.

30. OE /k/, as a rule, is written <k> before front vowels, <c> before back vowels and consonants, including /n/, e.g., coldep, ikunde (where <u> = /y/), 1. A32. However, facen, 1. C(G)10, occurs beside
faken, 1. C(G)17. Medially <ck> prevails, a sign of lengthening (Jordan 178.2). /k/ does not occur finally.
(a) /kw/ in one case is spelled <qu>, qualeholde, 1. D(B)42 (Jordan 178.1), otherwise <cw>, e.g., icwemdest in the same line.
31. OE /b/ and /bb/ medially are retained and written <b> and <bb>.
32. OE /d/ and /dd/ medially are retained and written <d> and <dd> for the most part, but iwurben and iwurben, ll. B(F)45-46, occur.
33. OE /j/ is written <g> e.g., liggeh, 1. A21, except in ruglunge, 1. E(C)5 (Jordan 192).
34. OE /f/ is written <f> initially, <f>, <ff>, and <w> medially, e.g., zfre, 1. D(B)3, zffre, 1. A14, heui, 1. A15, and <f> finally; /f/ and /v/ were still allophonic in this poem.
35. OE /θ/ and /ð/ are both written <θ> throughout; OE /ðð/ is also retained medially and written <θθ>. /θ/ and /ð/ would appear to still be allophones in this work. Unvoiced /t/ for /θ/ appears in menet, 1. A7; <θ> occurs in hauw, 1. C(G)26, perhaps indicating an early stage in the movement of /θ/ to the sound written <gh>. 34 <d> in lod<liche>, 1. E(C)48, occurs beside lobre, 11. C(G)1 and F(D)11.
36. OE /s/ and /ss/ are written <s> and <ss> respectively, though it also is possible that blecsien, 1. F(D)13, shows <cs> for /ss/. /s/ and /z/ are still allophones.
37. OE /ʃ/ is written <sc> as a rule, but <sch> occurs once, schal, 1. A9, beside scal, 1. D(B)35 (Jordan 181).
38. OE velar 3, i.e., /v/, is written <g> in initial position, e.g., gederest, 1. D(B)34, gultes, 1. C(G)11; it had already become a plosive (Jordan 185). Medially, not preceded by /t/, /v/ shows
evidence of having joined the /w/ phoneme, see II i 45 below; when preceded by /t/, as well as finally, it appears to have become an allophone of /x/ as it probably was in 1OE. See II i 46 below.

39. OE palatal ʒ, i.e., /j/, is distinguished from /w/ initially by its written form, <ʒ>; the OE prefix <se-> is written <i>. Medially, /j/ appears to have merged with the preceding tautosyllabic vowel unless followed by /t/. <ʒ> continues to appear in some forms but is missing from others, e.g., unheige, l. E(C)30, beside heie, l. C(G)40. Before /t/ and finally it appears to have become an allophone of /x/; it is written in final position only once, lutig, l. D(B)2, beside lutí, l. F(D)28. See II i 46.

(a) deages, l. A40, shows a palatal sound, /j/, where one would expect /w/ from the velar /w/ given the OE form, i.e., dagæs.

It is conceivable that this form developed by analogy with the singular deʒ, but cf. possibly low-stressed lifdæwæ, l. A14.

(b) The variations of the words "sorrow" and "sorrowful" display the phonemic split between the former allophones /w/ and /j/: when followed by a vowel, i.e., when intervocalic, the sound is written <w>, e.g., seorwe, l. A16, seorwen, l. A27, when followed by /f/ or /l/ it is written <ch>, e.g., seorhfulæ, l. A8, seorhful, l. A15. 

40. OE /m/ and /mm/ medially are retained and written <m> and <mm>;

nammore, l. A34, shows <mm> owing to close juncture of OE na mara.

41. OE /n/ and /nn/ generally remain the same, but loss does occur medially and finally in some low-stressed words and syllables, e.g.,

farene, l. D(B)28, beside wuniennæ, l. F(D)18; me, l. F(D)10, beside

mon, l. A33; hire, l. D(B) 16, from OE þihræ. /n/>/nn/ in unnesæpe
is probably owing to close juncture.

42. OE /ŋ/ continues to be written <ng>, e.g., *menged, l. A26, ruglunge, l. E(C)5.

43. OE /l/ and /ll/ are spelled <l> and <ll> respectively, though some simplification of /ll/ is apparent in the -full suffix, e.g., scorthulle, l. F(D)25, beside scorthful, l. D(B)18, and in all, ll. C(G)6 and 13, beside al, l. A16. The occurrence of a double consonant finally in all and in iwill, l. C(G)3, is rare in this work.

44. OE /r/ is spelled <r>. Metathesis is apparent in wrouhte, l. G(E)16, beside wurchen, l. G(E)1. Spekinde, ll. C(G)16 and 25, may not, in fact, show loss of /r/, but supplantation of sprecan by specan (Jordan 165 rem. 2).

45. Unvocalized OE /w/ is retained and written <w>, i.e., the runic ũ. In low-stressed words it is sometimes lost, e.g., so, l. A26, besides swo, l. D(B)4 (Jordan 45.1). /w/ from OE /v/ is usually written <w> though <u> also occurs, e.g., reowliche, l. E(C)7, beside reowlic, l. B(F)19.

46. OE <h>, i.e., /x/, remains initially before vowels and before /w/, e.g., hwo, l. F(D)9, hwui, l. D(B)17, but it has been dropped before /r/ and before /l/, a development already begun in OE (Jordan 195), e.g., reowliche, l. E(C)7, rof, l. E(C)31. Medially, /x/ survives only before /t/ (and in lichane, l. A45, beside licame, ll. A11, 28, etc.), whether it was from OE /x/, /v/, or /j/ (Jordan 196), e.g., wrouhte, l. G(E)16, unselhte, l. F(D)45. There are no examples of lengthened /x/, i.e., <hh>. OE /hs/ has already become /ks/ written <ks>, e.g., waxen, l. E(C)38. <p> is
written for medial /h/ in *hype*, 1. D(B)12. Finally, /x/, from whatever origin, is written <h>, e.g., <lo>x, 1. E(C)31.

ii. Non-alphabetic Graphemes

1. Punctuation graphs: The point is used throughout the work to separate line from line and verse from verse, i.e., it would appear to be a metrical rather than a syntactical sign. The colon (it may, in fact, be a *punctus elevatus*, i.e., !) that appears in 1. A6 does not seem to function differently from the point. At two places in the poem, points are used to separate items of a list, a task for which they were employed in some OE poetical mss as well: *by were wedlowe* and *monsware* and were *huned inouh*, 1. F(D)47; *by scait roten* and *brostnian* *pime* *bon beob bedomed*, 1. G(E)9. And in at least one instance, it would also appear that points have been used to set off a word of one letter from the surrounding words, probably to achieve graphic clarity: *wendest by la erming her o to wunienne*, 1. F(D)18.

2. Tachygraphs: In the English lines, a tilde over a vowel is used sporadically to indicate a following nasal, e.g., *into*, 1. D(B)28, *in*, 1. G(E)52; *p* is used throughout to indicate *bet*, though the word is often written out in full as well—*bet* occurs once, in 1. E(C)34; *p*, meaning *purh*, occurs twice, in 1. B(F)47 and 1. E(C)44, but usually the word is written out in full; *f*, meaning *pri-* occurs three times in Fragment B(F), in ll. 22, 27, and 31; *pri-* is written out in ll. 21 and 32 of the same fragment.

In the Latin lines, a tilde over a letter is used to indicate
missing letters that generally precede the marked letter, e.g.,
omia = omnia, l. B(F)44, redditi = reddituri, l. G(E)41, and
sometimes follow it, e.g., eternus = eternum, l. G(E)46, particularly
if the following letter is a nasal; p stands for per in l. B(F)2
and for pro- in l. G(E)41; a curving stroke over a letter indicates
missing following letters, e.g., q = qui, l. G(E)50, t = ter in
eternam, l. G(E)50, and p = pri, as it does in the English lines,
in propriis, l. G(E)41.
3. Word signs: There are two word signs used throughout the work,
both for the conjunction and -- and ®. The word is never
written out in the English lines. In the Latin lines, et is
written in l. B(F)44 and l. G(E)50, and is written in l.l. B(F)2 and
49.

iii. Graphemic-Morphemic Correspondences

A. Nouns

1. Nom.sg. is marked by either {-sy} or {-s}.
   (a) Most fem. nouns show an {-e} ending not present in OE, e.g.,
   ore, l. B(F)8, soule, l. A45, godnesse, l. D(B)3. help, l. G(E)28,
is probably masculine.

2. Acc. sg. forms cannot be distinguished from nom. sg. forms on the
basis of inflection.

3. Gen. sg. is marked by {-es} except in the weak forms dedan, l. A42,
and weolan, l. D(B)32.

4. Dat. sg. is marked generally by {-e}, though {-an, -am} do occur in
nouns of the weak declension, e.g., sorpe, l. E(C)5, beside sorban,
l. B(C)7, and willan, l. D(B)33; drihten, l. C(G)18, men, l. F(D)4,
and perhaps lif, l. C(G)6, and bolster, l. E(C)26, show an uninflected dat. sg.

5. Nom. and acc. pl. forms are signalled by either {-es}, {-e} (original o-stem nouns), or {-en, -an, -an}. A number of nouns that were strong in OE show weak plural forms, e.g., isceafan, l. A2, misdeden, l. B(F)9, goldfaten, l. D(B)7. In a small number of words pl. forms are indicated by ablaut + {-e}, e.g., men, l. E(C)16, teb, l. C(G)6, hec, ll. B(F)35, C(G)34, 55. feond, l. E(C)39, bearm, ll. C(G)54 and 55, and ping, ll. B(F)42 and 45, show an uninflected pl.

6. Gen. pl. is marked by {-e}.

7. Dat. pl. is signalled throughout by {-en}, the analogical development of OE {-um} (Jordan 136, rem. 1). {-an} occurs once, in fotan, l. E(C)3. For possible dat. pl. forms in {-es}, see II iv 6.

B. Adjectives

8. Nom. sg. forms are marked by either {-e}, e.g., sor, l. A5, or by {-e}, e.g., wregche, l. D(B)35, whether predicative or attributive.

9. Acc. sg. strong masc. adjectives end in {-ne}, otherwise the ending is {-e}, e.g., sceoruhfulne, l. D(B)19, seorhfulne, l. A8.

10. Gen. sg. is signalled by {-es}, e.g., rihtes, ll. C(G)12 and G(E)20, and, in the weak declensions, by {-e}, e.g., heige, l. G(E)39. However, almihites, l. B(F)41, occurs in weak position.

11. Dat. sg. forms are marked by {-e}, except for strong fem. forms that have {-re, -ere}, e.g., lopre, l. C(G)1, decopere, l. C(G)26. holi, l. F(D)12, is almost certainly the first element of a compound,
cf: holie, 11. B(F)43, C(G)40, C(G)45.

12. Pl. forms are signalled by {-e} for the most part. Exceptional is alre, 11. G(E)7 and 47, that shows the survival of the OE {-ra}, and the uninflected acc. unhol, 1. F(D)3.

13. The comparative form of the adjective is marked by {-re}, the superlative form by {-est}, e.g., blipre, 1. E(C)16, fullest, 1. G(E)7.

14. Forms of the suppletive adjectives "large" and "bad" that occur in the poem are muchole, 1. A3, wes, 1. G(E)47, and wurst, 11. B(F)30 and F(D)30.

C. Adverbs

15. Adverbs are formed by the addition of one of three suffixes: {-e}, {-lie, -liche}, and in one case {-lunge}, i.e., ruglunge, 1. E(C)5. riht, 1. A38, and muchel, 1. D(B)6, are uninflected.

D. Numbers

16. Three cardinal numbers occur: fem. dat. one, 1. A33; neut. dat. one, 1. B(F)46; weak fem. sequene, 1. B(F)40. The only ordinal form is sequebe, 1. B(F)35.
E. Pronouns

17. The forms of the personal pronoun that occur in the work are charted below.

<table>
<thead>
<tr>
<th></th>
<th>1st sg.</th>
<th>1st dual</th>
<th>2nd sg.</th>
<th>3rd masc.</th>
<th>3rd fem.</th>
<th>3rd neut.</th>
<th>3rd pl.</th>
</tr>
</thead>
<tbody>
<tr>

<td>heom</td>
</tr>
<tr>
<td>Acc.</td>
<td>me</td>
<td>unc</td>
<td>pe</td>
<td>hine</td>
<td>heo</td>
<td>hit</td>
<td>heo</td>
</tr>
</tbody>
</table>

(a) For the variation of dat. 3rd pl. heom and ham, see Jordan 151. Heo and hi were variants of the acc. 3rd pl. in OE; ham in this case may be indicative of the collapsing of the dative and accusative cases into a single objective case; hi occurs twice, 1. D(B)14 and 1. F(D)22.

(b) bii occurs once, 1. G(E)8 (see II i 8), as do bire, 1. D(B)16 (see II i 41), and bines, 1. D(B)32.

(c) ure, gen. 1st pl., occurs once, 1. G(E)12.

18. The demonstrative pronouns that occur in the work are charted below:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Nom.</td>
<td>be</td>
<td>beo</td>
<td>beo, pe</td>

<td>bet</td>
</tr>
<tr>
<td>Gen.</td>
<td>brea</td>
<td>bere</td>
<td>bere</td>
<td>bres</td>
<td></td>
</tr>
<tr>
<td>Dat.</td>
<td>ben</td>
<td>ham</td>
<td>bere</td>
<td>?ben</td>
<td></td>
</tr>
<tr>
<td>Acc.</td>
<td>bane</td>
<td>ba</td>
<td>ba, beo</td>
<td>beo, beo</td>
<td>beo</td>
</tr>
</tbody>
</table>

(a) If boc is neut., then ben, 1. E(C)20, is neut. dat. sg.; however, boc could be masc.
(b) The demonstrative pronoun "this" occurs in the following forms: masc. nom. sg. þes, 1. E(C)9, neut. nom. sg. ðis, 11. B(F)40 and 41, neut. dat. sg. þissen, 1. B(F)42, fem. dat. sg. þisse, 1. G(E)35, neut. nom. pl. þec, 1. C(G)55.

(c) "Self" occurs thrice: 2nd masc. dat. sg. þe sulfen, 1. B(F)28; 2nd masc. dat. sg., þe sulfen, 1. E(C)27; 3rd masc. dat. sg. him sulfen, 1. B(F)23.

(d) As in OE, forms of the demonstrative pronoun also serve as relative pronouns. The predominant form is þe; þet and þeo also occur and þa occurs once, 1. G(E)18.

19. Interrogative forms are hwī and hwīj, derived from what is generally classified as the OE instrumental form.

20. Indefinite pronouns are: al, e.g., 1. B(F)46, 1. D(B)41, F(D)50; hwo, 1. E(C)13, 1. F(D)8; nammore, 1. A34; ?noht, 1. D(B)33; mon/þe, 1. A33, 1. E(C)9, 1. F(D)10.

F. Verbs

21. Infinitives are signalled by {-en} in general beside {-æn, -æn}, e.g., riden, 1. E(C)5, cuman, 1. F(D)43. Infinitives of Class II weak verbs are usually marked by {-ien, -ian}, e.g., clensien, 1. F(D)10, brostnian, 1. G(E)9; fostren, 1. F(D)2, occurs beside fostrien, 1. C(G)54. The following inflected infinitives occur: faren, 1. D(B)28, lokienne, 1. B(F)18, wuniene, 1. F(D)18.

22. 1st sg. pres. ind. is marked by either {-ð}, e.g., scal, 1. D(B)36, or {-e}.

23. 2nd sg. pres. ind. is marked by {-t}, e.g., scalt, 1. D(B)68, {-st}, e.g., list, 1. D(B)38, or {-est}, e.g., lettest, 1. E(C)17.
24. 3rd sg. pres. ind. forms are generally marked by {-ep}, {-p} before vowels and by {-ς}, e.g., *sclal, 1. A9, *lest, 1. P(D)41, beside *lestep, 1. D(B)49 and *lestep, 1. A14. Exceptional are *menet, 1. A7 and hauef, 1. C(G)26; see II i 35.

25. Pl. pres. ind. is signalled by {-ep} and by {-iep} in Class II weak verbs. Exceptional are cumep, 1. A44, along with teorep, 1. A20, and hondep, 1. A40, which are weak Class II verbs in OE. Syncopated forms are besihip, 1. A45, and lib, 1. A36, liip, 1. E(C)31 (see II i 8).

26. Sg. subj. is marked by {-e} except in Class II weak forms which show {-ie}.

27. Pl. subj. is marked by {-en}.

28. 1st and 3rd sg. pret. ind. forms are unmarked in strong verbs and signalled by {-ede, de} in weak verbs.

29. 2nd sg. pret. ind. is signalled by {-e} in strong verbs, {-dest, -dest, -test} in weak verbs, and once with {-es}, mostes, 1. G(E)26. slepest, 1. G(E)26, indicates that this verb, which was strong in OE, has now become weak.

30. Pl. pret. ind. forms have {-en} in strong verbs, {-eden, -den} in weak verbs.

31. Pres. part. of strong verbs are signalled by {-inde}; pres. part. of weak verbs show {-inde}; see II i 24.

32. Pret. part. of strong verbs end in {-en} and are prefixed by {-i} unless another prefix is already present. Exceptional in regard to the prefix is rungen, 1. G(E)27; pret. part. of weak verbs end in {-ed, -d, -t} and some pl. forms show inflection, i.e., {-e}, e.g., neut. nom. forudutte, 11. G(E)17 and G(E)30, masc. acc.
The only imperative form in the poem is *iwarbe*, l. B(F)45.

There is insufficient evidence upon which to base a judgement about the development of ablaut in the forms of the OE strong verbs, but it would appear that, allowing for phonological change, the gradations remained substantially unchanged.

(a) The interchange of vowels in pl. pret. *iwarpen* (OE wurdon), l. B(F)45, and pret. part. *iwarpen* (OE worden), l. B(F)46, is probably owing to analogy.

The forms of the verb "to be" that occur in the work are charted below:

<table>
<thead>
<tr>
<th></th>
<th>Pres.</th>
<th>Pret.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st</td>
<td>eam, am</td>
<td>was</td>
</tr>
<tr>
<td>2nd</td>
<td>ært, eart, ert, bist</td>
<td>was, were</td>
</tr>
<tr>
<td>3rd</td>
<td>æ, nis, bib</td>
<td>nes (negative)</td>
</tr>
<tr>
<td>Pl.</td>
<td>beoh</td>
<td>weren</td>
</tr>
</tbody>
</table>

(a) The pres. sg. subj. form is *beo*: the pret. sg. subj. forms are *were* and *were*; the infinitive is *beon*. 
iv. Syntax

1. **Gender**: For many forms, gender is unclear because of the levelling of inflectional endings and the fact that a number of words could be found in more than one gender in OE.

   A number of apparent changes in gender in some words of the poem may actually be caused by eME developments in the expression of the plural, i.e., these changes may have more to do with number than gender. On the one hand, a number of neut. pl. forms, both nom. and acc., for which one would expect no inflectional ending, show an {-es} ending typical of masc. pl. forms: e.g., *modes*, 1. C(G)48, *pundes*, 1. D(B)5, *dreampurles*, 1. G(E)30, and *bones*, 1. F(D)25, which occurs beside *ban*, 1. A21, and *bon*, 11. E(C)42, G(E)9, and G(E)11. While this addition of the {-es} suffix would appear to indicate a movement from the neut. to the masc. gender, Von Glahn argues that it is, in fact, evidence of a new way of forming the plural for long stem and polysyllabic neut. nouns that was becoming common in the southwest. 36 On the other hand, a number of strong nouns from all genders appear to have moved into the weak declension, e.g., *isceafthan*, 1. A2, *lawen*, 1. C(G)50, *summen*, 1. B(F)11, *goldfaten*, 1. D(B)7, *liisten*, 1. G(E)18, *deden*, 1. G(E)42, and *misdeden*, 1. B(F)9. However, these may very well exemplify not so much a movement in gender as the prevalence in the south of an alternative plural form in {-en}.

   As a rule, gender distinctions are maintained, i.e., pronouns usually show the gender of the noun to which they refer. The fact that the most clear instances of a shift in gender occur in the plural would indicate that, while OE gender distinctions are
generally maintained, number has primacy over gender in the formation of words. In l. C(G)31, however, *foster* has apparently moved from masc. to neut.

2. **Number:** Though the treatment of number is, on the whole, unexceptional from the point of view of syntax, see II iv 1 above.

3. **Case:** There are at least four instances in which an *of(at)-periphrasis* is used for the genitive: l1. A22, D(B)16, E(C)7, and G(E)10-11. There are a few other instances where it is unclear whether *of* is used as a preposition marking the genitive or in its OE sense of "out of, from": e.g., l1. A34, B(F)42, G(E)31. Inflectional genitives are the rule (see Mustanoja, pp. 74-5).

   The indirect object is expressed once with the *to-periphrasis* (Mustanoja, pp. 95-7): l. G(E)22 *be wel* *tuhte his hearpe* and *tuhte be to him*. Indirect objects are expressed otherwise with the inflectional dative. Instrumentality is primarily expressed by a dative governed by the preposition *mid*.

   Generally, one finds that the cases used in particular instances in the poem correspond to the cases that would have been used in similar OE constructions. For example, the adjective *lub*, l1. B(F)17, C(G)18, and C(G)50, governs the dative case (Mustanoja, p. 103); the verbs *helpen*, l. E(C)25, and *cwemen*, l. C(G)19, take objects expressed in the dative (Mustanoja, pp. 101-2); *bideled*, l1. D(B)16, E(C)32, and G(E)9, and *birefen*, l1. A22, C(G)12, E(C)7, and G(E)20, all take objects expressed either with an inflectional genitive or an *of(at)-periphrasis* (Mustanoja, pp. 87-8).
4. **Pronouns**: As a rule, personal pronouns are expressed; however, 

bu is omitted, e.g., from F(D)47b. In the two instances in which 
2nd person personal pronouns are intensified by "self," ll. B(F)28 
and E(C)27, the form of the pronoun is be, not the possessive bi 
which later predominated (Mustanoja, p. 146).

Inflected possessive pronouns (adjs.) are a feature of early 
southern and SWML texts (Mustanoja, p. 151). See II iii 17(b). 

The indefinite me "man, one" is a southern or SWML form 
(Mustanoja, p. 220). It occurs once, 1. F(D)19; mon occurs twice, 
ll. A33 and E(C)9.

5. **Adjectives**: There are two instances in the poem where the OE 
distinction between strong and weak adjectives seems to break 
down: 1. B(F)41, þēs almihties fader, and 1. C(G)6, dreigen ber 
wrecche sip. In the former, one would expect a weak form of 
"almighty"; in the latter, a strong form of "wretched." However, 
it is conceivable in 1. B(F)41 that the construction reveals not 
simply an OE syntactical distinction, but also an early example of 
a definite article developing out of the OE demonstrative pronoun 
(Mustanoja, p. 245). In l. C(G)6 it may be that the weak form of 
the adjective is an error made by analogy with the other forms of 
this adjective in the similar rhyming lines throughout the poem, 
or, more probably, that ber is an adverb and not a demonstrative 
pronoun or definite article.

6. **Prepositions**: The preposition on is still used to indicate more 
than surface location, i.e., it has not been superseded by in 
(Mustanoja, pp. 399-400); e.g., on decepe sape on durelease huse, 
ll. 4(B)40 and G(E)8, and issid hit is on psalme, 1.4 C(G)19.
at occurs twice with the meaning "of," ll. A23 and E(C)8. **mid,** which governs the dat. or instr. cases in OE, governs what appears to be an acc. pl. form in {-es} five times: ll. B(F)17, B(F)22, C(G)11, C(G)38, and G(E)48. It also governs bolster in 1. E(C)26, but this form may be an uninflected dat. sg.; see II iii 4.

**bi,** which also is associated with dat. and instr. in OE, governs an acc. pl. in {-es} in 1. D(B)6. The traditional distinction between motion (acc.) and location (dat.) is maintained, by and large: e.g., *in het eche fur,* 1. G(E)48, i.e., "into the eternal fire," and *in hesuene,* 1. C(G)42, i.e., "in heaven."

7. **Verbs:** Reflexive verb forms occur at ll. B(F)8, D(B)14, F(D)13, and G(E)22. The impersonal verb *bunchen* occurs twice, ll. A39 and E(C)34, and in neither case with the formal subject expressed. The OE impersonal verb *licien* occurs three times: twice in relative clauses, ll. C(G)14 and G(E)21, with a dative object; once, 1. E(C)40, with the subject expressed and a periphrastic construction, *for hecnum pin fleasc likeb.* Impersonal *prisen* occurs once, 1. E(C)18.

To plus the inflected infinitive occurs three times in the poem (see II iii 21, above). To plus the uninflected infinitive is not usual but can occur, e.g., ll. D(B)15 and F(D)13.

The {-ing} ending for the present participle occurs twice, *greoning* and *woashing,* both in 1. A15.

Only a few subjunctive forms are found in the poem and they occur in unexceptional circumstances, e.g., *cume,* 1. D(B)11 in an object noun clause of a verb of volition (Mustanoja, p. 454); *cume,* 1. G(E)39, in a temporal clause introduced by *or* and expressed in the present tense (Mustanoja, p. 463). There are many periphrastic
constructions involving modal verbs and nonfinite verb forms that
are to be construed as subjunctive, however.

8. **Word Order:** Many varieties of word order can be found in the poem,
though in certain constructions the order is quite consistent.
Adjectives, demonstratives, and all genitive forms precede the
noun or pronoun that they describe. Prepositions generally precede
the words that they govern, but, as in OE, they often follow
personal pronouns, particularly if this allows them to precede a
verb form. Adverbs, as in OE, generally precede that which they
modify, but they can occur finally as well, e.g., sore, l. B(F)31,
seoppen, l. A33. Auxiliaries, as a rule, precede the nonfinite
forms to which they are related, though not always, e.g., bonne hit
iboren bip, l. A6. In both dependent and nondependent clauses,
common word order, i.e., subject-verb-object, is frequent, but
other orders do occur—subject-object-verb and object-subject-verb
are certainly not rare in either sort of clause; subjects, however,
tend not to be in final position; as in OE, direct objects that
are pronouns tend to precede the verb.

v. Rhyming and Assonant Lines

A number of lines in the "Soul's Address" are composed of verses
whose final stressed syllables are either rhymes or assonances. Most
of these correspondences are compatible with OE phonology, e.g., greening/
woaning, l. A15, from OE /aː/; fuse/huse, l. D(B)15, from OE /uː/;
forscutted/fordutted, l. G(E)38, from OE /yː/. The wordplay in l. E(C)27,
purpe cneow ofer cneow ne icneowe pur be sulfen, is also based on
identical OE sounds: cneow/icneowe from OE /eːə/. In a number of
instances, however, the correspondence is not so exact:

1. The apparent assonance of lif/sip, both vowels from OE /i:/, occurs nine times in the poem; wif/-sip occurs twice; ll. A41 and 43. If, however, the occurrence of <f> for <p> in hauef, l. C(G)26, is indicative of some conflation of the /f/ and /θ/ phonemes (see II i 35), then this assonant pair may be closer to a rhyme than they appear.

2. In ll. A23 and F(D)20 OE /y/ may be in correspondence with OE /u/, wunne/wunede and cunne/icunde. In ll. B(F)26, F(D)48, and F(D)50 OE /y/ may be in correspondence with OE /i/, sunne/wipine, sunne/wipinne, and fullen/wille. If these are indeed assonant pairs or rhymes, this would show some division in the development of OE /y/.

3. If boe/howe is a rhyme, this would indicate that /o/ in OE bo3a had undergone lengthening in order to correspond to OE /o:/ in hoh, l. E(C)4.

4. If it forms an assonant pair with blisse, the <i> of paradis, l. F(D)37, must be short.

5. The correspondence of helewewes and sidowes, l. E(C)30, almost certainly should be considered a rhyme, though this appears unlikely from their forms. The first <e> of -wes could be derived from OE /æs/, i.e., <ea>, but the <o> of -owes reveals a development of this diphthong before l-combinations more usual for /a/ in this work, perhaps with rounding to /o/ because of its location between /w/'s.

6. In l. C(G)43, sif bu hit ne forlure buruh bes deofles lore, forlure/lore probably is an example of consonance only.
Definitive statements about phonology cannot be made on the basis of the comparatively few rhyming lines in the poem. In some cases what might be rhyme may, in fact, be consonance, and what might be assonance, simply wordplay.

vi. Dialect and Date

The phonological, morphological, and syntactical forms in the poem seem to indicate that the "Soul's Address" was originally composed in a dialect of the southwest or southwest midlands. There is virtually nothing in the language of the work to allow for a consideration of a northern or eastern provenance. An examination of Crawford's description of the language of Worcester glosses in seven Oxford mss, including some in the "tremulous hand"; makes it seem likely that the forms we have in the "Soul's Address" are, by and large, those of the scribe, or, at least, we have no reason to suppose that they predate him. The fundamental defining features of WML dialects found in the work, e.g., /æ/>/e/, /y/ and /y:/ written <u>, /æ:/ /ə:/ before -ld, /æ/>/ə/ before nasals, could just as easily be scribal as authorial and probably are. Further, a number of the more remarkable forms might be scribal as well inasmuch as Crawford's description encompasses the possibilities of the Worcester dialect in the last part of the twelfth century. The writing of <e> and <i> for OE /y/ in ʒet and chiroc (see II i 7) and <i> for OE /y:/ in hwi (see II i 14) may result from the apparent unsteadiness of the sound at Worcester; on the other hand, synne instead of sunne (see II i 7) seems to be an archaic form that has slipped through from the original work. In the glosses OE /œ/, i.e., <eo> appears as <e> in
werke, therefore the occurrence of this form in the poem might be scribal as well (see II i 16a).

In Hatton 113, f.3, the form dæges occurs with the <g> glossed by a superscript <i>, an indication that this consonant was perceived as a palatal and as tautosyllabic with the preceding vowel; cf. dæges, II i 39a. OE /ɣ/, written <g>, when not preceded by /t/, is consistently glossed <w> (see II i 38). There is some evidence that OE /t/ and /ts/ could be written <c> and that OE /s/ could be written <c> as well, a fact that lends credibility to the form blecsian (see II i 36). The gen. pl. of the 3rd person personal pronoun is frequently glossed with an <o> and the "Soul's Address" consistently shows hore; the dat. pl. is commonly glossed with an <a> and in the poem ham alternates with the older heom. Ham also occurs as the acc. pl. There is also evidence in Crawford's description to show that the Worcester scribes were not above substituting their own forms of the verb beon for ms forms, e.g., am can replace eom and bæð can replace synd(an) (see II iii 35). Further, the preposition fram is often glossed of; to, bi, and for can also occur for wiæ, wið, and burh respectively.

Hall's view that the work is "probably Middle South," is disputed by Oakden who points to OE /a>//a/ before nasals, OE /æe/ and /æːe/
written <e>, and the 3rd person plural pronoun form hore as developments indicative of the extreme southwest midlands, a view corroborated by Moore, Meech, and Whitehall. Kurath and Kuhn describe the work as southwestern. Also supporting a southern provenance are some southwestern phonological forms such as afurseð (see II i 16(a)) and huned (see II i 17b) as well as morphological features such as the {-iende, -inde} suffix for the present participle and the preservation of -i-
in Class II weak verbs. The occurrences of both OE neut. nouns with plural forms ending in \{-es\} and OE strong nouns with plurals in \{-en\} are also southwestern and southern characteristics respectively (see II iv 1).

The great extent to which the scribe has left his impress on the phonology and probably the morphology of the one copy of the "Soul's Address" that we have makes dating the original work no easy matter. Stanley is of the opinion that many apparently archaic features, especially \<a>\ and \<e>\ for \<e>\ in unstressed syllables, are examples of archaizing by the scribe with the "tremulous hand."\(^{42}\) However, Hall is probably correct in his view that the orthography of the poem reveals "two distinct stages of development, the later showing the copyist's practice towards the end of the twelfth century, the more primitive being that of the original, which may have been fifty or sixty years earlier."\(^{43}\) The large number of \<ea>\ spellings retained from OE (see II i 10, 15, and 17) as well as the examples of back-spelling to \<ea>-\ deages, l. A40, and bileafen, l. F(D)6,- indicate a date of composition significantly earlier than that of the scribe. The retention of \<y>\ for OE \(/y/\ in synne, l. B(F)33, and the word digelliche, l. B(F)6, probably a West-Saxon literary form, are also indicative of a work older in date than Worcester Cathedral MS. F. 174. And in the area of syntax the work seems quite old, fairly consistent with OE prose usage. It may have been written in the eleventh century after the Conquest, as Chambers and Everett suggest,\(^44\) but most commentators place it, as does Hall, in the first half of the twelfth century. A more thorough study of the work of the Worcester scribes similar to that carried out by Crawford, and a sub-study of works in
the "tremulous hand," would allow for a more precise estimate of the impact of the scribe on the language of this version of the poem.
In his analysis of prosody in the "Soul's Address," Buchholz finds four groups of lines: those in which the two verses are linked by alliteration, e.g., and ade beo iseæftan be him to sculen, l. A2; those in which the verses are linked together by alliteration and some other phonological device, i.e., rhyme, assonance, etc., e.g., heo weren monifolde hi markes itolde, l. D(B)6; those in which only rhyme, assonance, etc. link the verses, e.g., he saip on his bedde wo me p(et) is libbe, l. A13; a number of lines with no apparent connecting features (lines that may, in fact, be defective), e.g., heom bungep p(et) hore hondan swupe beob ifuled, l. A39. Almost every line in the poem consists of two verses; the MS. pointing makes this division clear. In almost every verse one can discern two syllables that ought to receive primary stress. However, if the fourfold division that Buchholz carries out is possible, one is clearly not dealing with "classical" OE verse, as described by Sievers, Pope, Bliss, and a host of other commentators. Nevertheless, since some critics insist on using the OE model in their examinations of ME alliterative verse, it is worthwhile to attempt a more thorough, if preliminary, analysis of the poem's prosodical features from the point of view of OE verse, not only for the light such an analysis may shed on this and other ME alliterative works but also for what might be
revealed, in the process, about OE prosody itself.

If one looks first at the whole line as the significant prosodical unit of the poem, it becomes apparent that the alliterative patterns in the "Soul's Address" are much more varied than those of OE "classical" verse. In the 332 complete English lines of the poem every conceivable pattern occurs besides the standard OE ones: ax/ay, aa/ax, xa/ay, and ab/ab, ab/ba. Further, particles and finite verbs appear capable of receiving stress and alliteration at any point in a verse, e.g., he \( \textit{walkep and wende}\) and \( \textit{wonep oftesipes} \). 1. A12, \( \textit{him scorp} \) \( \textit{be neose} \) and \( \textit{him scrinc} \) \( \textit{ba lippen} \). 1. A18. However, setting aside lines from the last two groups listed above (along with lines where damage in the MS. occurs at a place where alliteration might well be expected), one can see that the common OE alliterative patterns continue to predominate. Out of 190 lines, 132 conform to one of the five standard patterns, and all but seven of these to the three main ones: sixty-four lines alliterate xa/ay; thirty-four, aa/ax; twenty-seven, ax/ax. Also, the alliterating staves tend to conform to OE standards, though, as Oakden indicates, some new initial clusters appear to be emerging: sc may alliterate with g; st, sw, and (in every case but one) gr alliterate only with themselves; palatal 3 does not alliterate with velar g.

Turning to the half-line as the significant prosodical unit, the usual method in the treatment of OE poetry, one finds, as in the case of alliterative patterns, a wider variety of verses than would generally be found in "classical" OE verse. However, one should not be as hasty in discarding the OE system of verse-types when analyzing the "Soul's Address" as Buchholz, Oakden, and others have been. With varying degrees of success, Luick, Schipper, and more recent commentators have
attempted to discern the remnants of the "classical" OE types in eME verse. 51 Most recently, James Noble has shown that, by using Pope's system of rhythmical analysis, one can, in fact, identify what would appear to be the five verse-types, A through E, in Layamon's Brut—in a more relaxed form, to be sure, but the OE verse-types nevertheless. 52 The same identifications can be made in the "Soul's Address." Even if one insists on a strict adherence to the operation of phonological features in the verse, i.e., vowel and syllable quantity and resolution, and on the OE hierarchy of stressed elements, a number of the alliterative verses in the poem can be readily identified as OE verse-types: 53

A1: lif and|soule, A4b
licame|cristes, D(B)25b 54
stonden mid|fotan, E(C)3b

A2: beren ut|pin|bedstrau, F(D)14a 55
pone lip|pe|cleiclot, A36a

A3: for heo <we>ren|gradie, D(B)13a 56
nu pu ert|adu(m)bed, B(F)16a
nullep heo mid|honden, A38a

A4: pe him to|sculen, A2b 57
and him on|leide, A4a 57

B1: ac|per|bip|sor|idol, A5b
<op> ure|drihten eft, G(E)12a
korpon> ic|securful eam, D(B)18b

B2: and pene|securful e sip, A6a
There are also a number of expanded D verses, probably a higher proportion than in "classical" OE verse:

D#1: liggeþ beþe þon stilleþ, G(E)11b

D#4: deredest cristene men, F(D)29b
dreisen þer|wrecche siþ, C(G)6a.
inherent in the nature of the verse prevents them from occurring, something no longer present in the verse of the "Soul's Address." Those features in the "Soul's Address" that are absent from OE verse are not insignificant accretions on the basic OE verse-form; their presence is evidence of a fundamental disruption of the OE verse-making process.

If one examines the lines of the "Soul's Address" using the measure as the significant prosodical unit, an approach to OE verse suggested by Creed, an important difference between these lines and the "classical" OE alliterative line is revealed. As Creed demonstrates, there are basically two kinds of measures in OE verse: those with two elements, i.e., / x / (x) / x / \ / \ /, and those with three elements, i.e. / x \ / \ x \ x. 61 Taking his cue from Pope, he allows, theoretically, any or all of these elements in a given measure to be taken by doublets or even triplets by a process he calls rhythmemic (as opposed to phonemic) resolution. 62

In theory, then, one could have a three-element measure such as / \ x / \ \ e e e e e e e e e e, i.e., nine syllables in a single measure of one half-line. Creed, however, acknowledges that such excessive combinations do not occur in the "classical" OE verse of Beowulf; in fact, he denies the existence of triplets in three-element measures altogether. 63 In the lines of the "Soul's Address," however, such crowded and overcrowded measures occur often. Rhythmemic resolution must be the norm rather than the exception if Creed's method of scansion is used. The following three half-lines, for example, are easily identified as B verses, but ones with a triplet rhythmeme between the two main stresses of the second measure:
Such verses are theoretically conceivable in Creed's system but in OE poetry they are "rare and of doubtful authenticity," according to Pope. They are much more common in the "Soul's Address" and in eME alliterative verse in general.

One can also find examples of measures that fall outside even the theoretical limits established by Creed. In OE poetry, the first measure of an A verse can have a drop of up to four or five syllables. In the following verses from the "Soul's Address," which seem to be A verses (and not A*), the first measures contain six unstressed syllables:

\[\text{lucipercliche eart }\] \[\text{pu for}\]

\[\text{lu<per<liche eart }\] \[\text{pu for|loren}\] \[\text{D(B)35a}\]

\[\text{lorice to hire|licame}\] \[\text{F(D)17b and G(E)3b}\]

A more significant disruption of the OE measure system can be seen in the following verses:

\[\text{and his|dimme egen}\] \[\text{A42b}\]

\[\text{from|hellewite}\] \[\text{D(B)26b}\]

\[\text{and ic scal|wrecche sou|<s>}\] \[\text{D(B)36b}\]

In the second measure of each of these verses there occurs a four-stress measure, unless one asserts that the rules regarding phonemic resolution do not apply in these cases. The verses themselves could be described as either B verses with an additional final syllable or C verses with an
additional medial one. What has been lost is not the verse-types
themselves nor the basic rhythm of the verse but the strict, simple
measure system with which they were constructed. The few examples of
such B/C verses in OE poetry are classified as remainders by Pope; they would appear to be much more frequent in the "Soul's Address"
than in OE verse in general. Further, verses such as

/ x x x / (x)
godnesse and riht, D(B)3a,

/ x x x / (x)
leofli che for pe, D(B)24a,

can be classified as E verses only if one accords formative suffixes,
i.e., -nesse and -liche here, a degree of stress that they neither have
elsewhere in the poem nor could be expected to have from a strictly
linguistic point of view. Nor, given their two heavy stresses, do they
seem to resemble the few verses in OE that Pope classifies as remainders
similar to normal A3 verses. 67

It might be argued that D(B)26b should properly be scanned
from hellen wite, i.e., as an A verse with monosyllabic anacrusis. This
is, in fact, a conceivable alternative in this case, but allowing for
anacrusis in this verse only brings into focus another prosodical
feature of the "Soul's Address" that distinguishes its metre from that
of "classical" OE verse, i.e., the high percentage of verses with
anacrusis compared to the very small percentage of verses so constructed
in a poem such as Beowulf:

. . . syntactically, the five-position pattern [i.e.,
A verse with anacrusis] of the prose is the expected
one. In ordinary formal discourse, many two-stress
phrases would begin with an unstressed particle, pre-
position, or conjunction, and end on an unstressed
inflectional syllable; thus: swa eca blisse.
Although this would be a normal pattern for poetry as well, it is avoided, for the meter excludes it. Otherwise one would expect to find the pattern in the same proportions in the poetry as in the prose—in which case Beowulf would contain over 3,000 verses of the type, rather than the 125 that might or might not be so read. However the meter is stated, it must contain an explicit constraint against the occurrence of the five position type . . . . If type A with anacrusis could occur freely, there is good reason, syntactically, for it to be the most common pattern; in fact, it is among the rarest, and two-thirds of the possible occurrences appear to have a common syntactic explanation [i.e., the syllable in anacrusis is a very low-stressed verbal prefix, or the particle ne, or both].

This constraint against anacrusis, whatever it may be, that Cable argues is operating in OE verse, is clearly no longer a factor in the verse of the "Soul's Address."

Scansion of the poem's first fragment as if it were "classical" OE verse—setting aside defective lines and those which most clearly seem to be rhyming rather than alliterative—reveals that twenty-nine of seventy-two verses have anacrusis, approximately forty percent. This figure is clearly far out of line with the less than two percent which Cable finds in Beowulf and much nearer the fifty percent figure he offers for the prevalence of the "five-position pattern" in OE prose. Furthermore, the syllables that one finds in anacrusis are not, by and large, verbal prefixes as they are in Beowulf: conjunctions and pronouns are most common; a verbal prefix occurs only once certainly (30b). It does seem clear that something fundamental in OE verse-meter is lacking in the "Soul's Address" when features that would be considered anomalies in OE verse occur with regularity in that poem. Given the frequency with which they do occur, both anacrusis and crowded, over-crowded, and unprecedented measures must be regarded as such features. And when
these anomalous features are coupled with those features discussed above that might, by themselves, be regarded as evidence of a relaxation of the OE verse-making process rather than a loss of it, e.g., the apparent democratization of the hierarchy of potentially stressed and alliterating elements and the diversity of alliterative patterns, it does seem undeniable that we are dealing with verse in the "Soul's Address" whose prosodical structure is radically different from that of "classical" OE verse.

It might be argued, in fact, that the "Soul's Address" is rhythmic prose and not verse at all, i.e., that it ought to be compared with the work of Ælfric and Wulfstan and not OE "classical" verse. This is apparently the view of both N.R. Ker and Angus Cameron. However, the metrical pointing of the MS., the high percentage of rhyming lines in the work, to be discussed below, and the tendency of English writers to treat the 'body and soul' theme in verse (when dealing with it to any great extent), all serve to render it likely that the writer of the "Soul's Address" regarded his own work as verse, regardless of what we might think of it. To insist on a clear, unambiguous distinction between verse and prose in the transitional period between Old and Middle English is unjustified. As Blake and others have pointed out, the boundary between the two in the eleventh and twelfth centuries was not as well defined as it usually has been in the course of English literary history. Whether the lines of the "Soul's Address" be verse or prose, however, they should be examined without imposing the stricter structures of "classical" OE verse on them.

As mentioned above, the "Soul's Address" can be justifiably divided into lines which, by and large, consist of two two-stress half-lines or
verses: the MS. pointing urges this division as does, in most cases, the distribution of apparently stressed and alliterating elements. These verses, in turn, can usually be divided into two or three constituent parts following the method of analysis adumbrated by McIntosh and developed more fully by Funke in their work on Wulfstan's prose.73

The three parts are these: the central portion of the verse containing the low-stressed syllables between the two main stresses, if any occur; the low-stressed syllables in anacrusis, if any occur; the low-stressed syllables in the cadence following the second main stress, if any occur. Two of these three constituent parts can be found in every verse almost invariably. It will be apparent that in this method of analysis the measure system of OE prosody is ignored; if one insists on using it, as we have already seen above, one must deal with a great many distortions by OE standards. Also, phonemic resolution, a fundamental feature in the prosodical analysis of OE verse, is not taken into account, even though resolution in all probability occurred in some forms. The following analysis is based on the count of visual syllables; no account is taken of grades of stress.

The typical cadence of the verses in the "Soul's Address," as in the rhythmical work of Ælfric and Wulfstan, is /x which occurs in the first four complete verses of the first fragment:

\[ \text{and alle þeo isceæftan} \quad \text{be him to aculen} \]
\[ \text{and mid muckle Canterton} \quad \text{be>ne mon he idihte.} \]

Only sculen in A2b might be subject to phonemic resolution. Monosyllabic endings, as in both verses in l. A6; b(æ) boðep b(æ) bærn bonne hit iboren bip, are considerably more common than they are in Wulfstan,74
but perhaps not quite as common as they are in Ælfric. The assessment here depends on whether or not rhyming lines are to be considered as a separate group. About fourteen percent of the alliterative lines end in monosyllables; the figure climbs to twenty percent if rhyming lines are included, a figure identical to the one given for Ælfric’s rhythmical prose. An examination of cadences in the verses of the poem generally confirms that nominal compounds and nouns with heavy formative suffixes have become, for the most part, words with a single main stress followed by two, three, or four low-stressed syllables, a situation linguistically predictable. Examples are pineb bene licane, Allob; purh / x x / x x / x x sobe bireousunge, B(F)12a; on holie wisdome, B(F)43b; imuten bine / x x / x x / x x morpodeden, G(E)15a; <from deapes dimnesse, G(E)33a. Alternative scansion from the point of view of OE prosody might be proposed in these and other cases, but they would be unjustified linguistically, particularly in regard to suffixes, and would also serve to swell the already large number of verses in the poem with anacrusis.

Nevertheless, it would appear that some compounds in the "Soul's Address" must receive two heavy stresses in order that the verses in which they are found not be deficient. Certain cases are et ben / x / x fontstone, C(G)37a; pu hauest kinemerke, C(G)41a; heo weren monifolde, D(B)6a; pine dreampurles, G(E)30b. Verse D(B)29a, as pu fenge to beowdome, may also be included because of the alliteration on d in the off-verse; however, one is tempted to stress fenge in this verse as well. In the use of compounds, the writer seems willing to have them pronounced with stress patterns that suit the requirements of a particular verse, though, in fact, no identical compound in the poem receives in one verse two heavy stresses and in another only one. Beowdome, D(B)29a,
and wisdom, B(F)43b and 48a and G(E)43a may demonstrate this apparent fluidity. The presence of compounds with two significant stresses seems to invite comparisons with "classical" OE verse on the one hand, though they are few in number, and only one, hellewite, actually occurs in the ASPR; on the other hand, the number of cadences composed of trisyllabic compounds with one heavy stress negates the validity of comparisons to OE verse where such cadences would not usually occur. 78

Verse D(B)29a brings to the fore another feature of the prosody of the "Soul's Address" that concerns the central part of each verse, i.e., the low-stressed syllables between the two main stresses. The number of syllables in this part ranges from zero, in verses similar to the OE type-C, e.g., pinc dreampurles, G(E)30b, to six, e.g., lueperliche eart bu forloren, D(B)35a, and soriliche to hire licame, F(D)17b and G(E)3b. 79

In the vast majority of cases, there are two main stresses in a verse, but in certain instances there seem to be three. It might be argued that in D(B)28a, ac by fenge to beowdome, the verb fenge ought not to be stressed, but, as a rule, finite verbs in the "Soul's Address" must be stressed along with infinitives and participles. (Auxiliary verbs are problematic; it is often difficult to decide whether they should be stressed or not.) A number of the examples of three-stress verses occur in rhyming lines, to be considered separately below, but some do not, e.g., for ufel is pinc wrecche lufe, A44a; pinc soule reste onfof, B(F)12b; buruh holie lufe cristes, C(G)45b; pinc wulle frafen pinc fule hold, E(C)41a. Among the examples in which a finite verb probably bears stress are mene hael ic pin ce eisen or opene, F(D)22a,edereest cristene men, F(D)29b, and both verses of 1. G(E)11, brekeb lieb from liebe liggeb be bon stilde> 80. In the last three examples, alliteration seems to demand
that the finite verbs be-stressed. It is a possibility that the poet looked on certain words as compounds or quasi-compounds that to us appear to be separate, e.g., fule hold, E(C)41a, and holie lufe, C(G)45b. It still appears true, however, that, as in the treatment of compounds, the number of main stresses per verse is not strictly systematic, though the number of instances in which three occur is not so large that we ought to consider that they derive from OE D and E verses, nor do the patterns of three-stress verses in the "Soul's Address" particularly resemble those OE types. It is also apparent that one cannot really speak of a central part of a verse consisting of the low-stressed syllables between the two main stresses if, in fact, there are three such stresses.

Funke, following McIntosh, remarks that anacrusis in the prose of Wulfstan seems to be compensatory: it almost always occurs when the main stresses of the verse form a pattern like the second measure of an OE B or C verse, i.e., /\x\ or /\x; the number of syllables in anacrusis is, for the most part, inversely proportionate to the number of syllables in the rest of the verse. 81 A similar situation exists in the "Soul's Address." Only two verses in the poem that end with a stressed monosyllable lack anacrusis: efre ma eft, B(F)18a, and godnesse and riht, D(B)3a. Verses without anacrusis usually contain a central part of three, four, or five low-stressed syllables, e.g., softliche be heo isom<nede>, A5a; sorliche idalen, A9b; pineb bene licame, A11b; seoruhlliche bereaud, A22b. Verses whose length from the first main stress to the end is seven syllables or longer have only one syllable in anacrusis in nearly every case in which there is any anacrusis at all, e.g., mid seorumen all bewunden A27b; mid elites bu eft for<pun>den; B(F)17a. Exceptional is bonne be licame and be souls, A28a, with
trisyllabic anacrusis. Verses whose main part is six syllables in length generally have one syllable in anacrusis and sometimes two, if anacrusis occurs, e.g., and *atterne biihinden*, C(G)17b; nu heo wuniep on esorpe, F(D)24a. If the main part of a verse contains five syllables, anacrusis occurs frequently. About half the time the anacrusis in this case is monosyllabic; dis- and trisyllabic examples are also frequent, e.g., *hine deaues pe arene*, A17a; and *mid mucheles crefte*, A3a; and *bene seorulfule eip*, A8a. Verses whose main part contains four syllables occasionally have one syllable in anacrusis, but two or three syllables are much more common, e.g., *on deope sape*, D(B)40a; *b(urh) peas deoflas lore*, G(E)21a; for *hit ful sumne*, *G(?)5a*. Verses whose main part is only three syllables in length always have anacrusis and rarely only one syllable. Two syllables in anacrusis are usual in such verses, three or four syllables are common, e.g., *burh hopen script*, B(F)10a; *so beo bec segespe*, B(F)35b; *so berb bip sor idol*, A5b; *poune hit iboren bip*, A6b.

The average number of syllables in all English verses of the poem, with or without anacrusis, is about 6.5; verses of six or seven syllables are the most common varieties though ones of five and eight syllables certainly are not rare. The figure of 6.5 is lower than that given for the prose of Ælfric, 6.7, and lower still than the average length of a verse in Layamon's Brut, 7.26. It is significantly higher, however, than the figures for both Beowulf and the 10E "Exhortation to Christian Living," "not quite five" and 5.3 respectively.

It is Pope's view that, since Ælfric's prose rhythm only approximates the strict rhythm of OE verse, syntax plays a more funda-
mental role in the establishment of his lines than it does in the verse:

A form so loosely governed as Ælfric's must depend upon syntax even more heavily than the traditional verse. As in the verse, the majority of Ælfric's half-lines are established by the syntactical phrasing even when no actual pause is in order. So far as half-lines go the syntactical indications are about the same for both forms; but syntax establishes the full line more firmly in Ælfric than in most of the poems. That is, Ælfric's lines are prevailingly endstopped, with only light stops or none at all in middle. Full stops in mid-line do indeed occur, but much less frequently than in most of the verse, and enjambment is correspondingly restrained.  

Likewise, in the "Soul's Address," endstopped lines, established by the syntax are the rule; both full stops after half-lines and enjambment are rare. What Carolynn Friedlander calls the "variance" of OE verse, the tension between prosodical and syntactical units that forms "the basis of inversion, suspension, and enjambment," the characteristic stylistic features of "classical" OE verse, is missing from the "Soul's Address" and eME "accentual" verse in general.  

The coincidence of half-line and full line divisions with syntactic divisions would seem to indicate that the writer of the "Soul's Address" fashioned his line according to syntactic requirements, that he, along with Ælfric, lacked a strict prosodical system like that found in OE poetry.

It is possible, however, that the compensatory nature of anacrusis in the "Soul's Address" reveals another way in which the poet organized his verses. It would appear that he conceived of them as filling a given length of time just as the OE verses did, according to Pope's theory of rhythm. However, this time had to be established in the eME poem by spoken words, i.e., a significant stress could not coincide with a rest as it does, according to Pope, in most examples of B and C verses.
in Beowulf. Therefore, he used syllables in anacrusis to fill out the verse if it was perceived to be too short, and, if this is true, then anacrusis should not be considered extrametric in the "Soul's Address." In most cases the preceding verse cannot easily accommodate the extra syllables. They are, instead, a fundamental feature of the verse which they begin, and, strictly speaking, probably ought not to be regarded as anacrusis at all. Nor is this situation surprising from a linguistic point of view. Among the important developments in the language in the movement from Old English to Middle English was a general levelling of stress as the basis of English speech rhythm became increasingly sentence-stress instead of word-stress. The stressed words in a verse of the "Soul's Address" would have been less forcefully pronounced than their counterparts in an OE verse, and low-stressed syllables, including those in anacrusis, would, by the same token, receive more stress than their OE counterparts. The line in the "Soul's Address" is, therefore, less weighty and more diffuse than the "classical" OE line. That there is a prosodical system underlying the verse of the "Soul's Address" comparable to the OE system, though different from it, does not seem probable, but more must be learned of the language of the transitional period before the case can be closed.

The usual explanation of the differences between the OE alliterative line and its early and late ME counterparts rests upon the pressure brought to bear on archaic linguistic forms by linguistic change, e.g., the shift from word-stress to sentence-stress just mentioned, the shifting of vowel quantities and the loss of grades of stress in compound words, and the levelling of inflectional endings as the language moved from synthetic toward analytic syntax. Those who argue for the
continuity of the alliterative tradition tend to minimize the effects of this pressure; those who are less concerned with demonstrating this continuity, such as Winfred Lehmann, tend to emphasize them:

Tradition . . . played a greater role in the maintenance of the alliterative line in England than in any of the other West Germanic dialects. In early Old English, the strict Germanic line was maintained through retention of an old poetic vocabulary and syntax; in late Middle English, alliterative poetry was composed, though with linguistic rhythms totally different from those of the Germanic old English alliterative line. In Old English, linguistic changes had by no means removed the basis for alliterative verse; the relatively strong stress actually supported it. But as substantives gradually lost their distinctive stresses, the language with its great increase in number of function words was more adaptable to rimed than to alliterative verse, and even a strong tradition could not hinder the gradual adoption of rime.88

In later OE poems, in a poem such as the OE "Soul and Body," for example, the evidence of linguistic pressure on the old prosodical structure is quite substantial. The average number of syllables per verse is slightly greater than that of Beowulf; anacrusis is somewhat more frequent. There is a marked tendency in the poem toward A1 verses with rather full first measures and to A3, B, and C verses, some of which have first measures larger than any that occur in Beowulf;89 there is a corresponding tendency away from A2, D, and E verses. These developments can be explained by taking into account the movement toward analytic syntax, the corresponding increase in the number of function words, and the loss of gradations of stress in the compounds necessary for the construction of A2, D, and E verses. However, from the point of view of prosody, "Soul and Body" is still an example of
"classical" OE verse. It is not a simple step or two from its prosodical structure to that of the later 'Body and soul' poem, the "Soul's Address." Rather, along with the steady pressure of linguistic change on increasingly archaic forms, there must have been another, more abrupt, change which took place that, together with gradual linguistic developments, accounts for the prosodical nature of the alliterative line in the "Soul's Address."

The OE "Soul and Body," despite being a relative late example of OE verse, is demonstrably formulaic, even if one adopts the conservative definitions of the formula and the formulaic system proposed by Watts: "a repeated sequence that fills one of Sievers' five basic rhythmical types" and "two or more phrases of a similar Sievers' verse-type, syntactical pattern, and lexical significance, which may differ in an important element according to alliterative substitution, or context, or a type of narrative superfluity." Two-thirds of the verses in "Soul and Body" are formulaic according to Watts' definitions, i.e., they either correspond to a verse found elsewhere in the ASPR or differ from another verse only in "an important element": half of the verses in the poem are formulas. Verses in some way questionable, including all A3 verses, have been excluded from this assessment; their inclusion or the adoption of less strict definitions of the formula and the formulaic system would obviously cause the figures stated above to rise. In the "Soul's Address," on the other hand, thirty verses at most would appear to have some antecedent in the OE verse printed in the ASPR. This is a considerably lower percentage than the OE "Soul and Body," even if these thirty do, in fact, represent an active formulaic structure used by the poet. That they do represent such a structure, however, is itself
questionable at best: a cursory check of OE homiletic prose works reveals that at least half of the collocations in these thirty verses were current in the prose and it seems highly probable this number would increase if a more extensive search were undertaken. The evidence indicates that, despite the occurrence of a few poetic words cited by Oakden, and despite the evidence that the poet could occasionally create compound words, the OE formulaic structure was not a factor in the composition of this poem and that it was, in fact, a thing unknown to the creator of the "Soul's Address."

Need the disappearance of the OE formulaic structure have had an effect on the OE prosodical structure? To answer in the negative is to assert that the two structures could, and, in fact, did exist independently of one another, that it was possible that an OE singer/poet learned OE poetic rhythms exclusively, without content or, to be more charitable, without significant content, i.e., that he learned the prosody of his native poetry as a series of rules much as undergraduates today must learn it. And onto these various rhythmical structures at some later date he placed surprisingly regular patterns of words, perhaps in his sophomore year. Likewise, if it is asserted that formulaic structure existed exclusive of prosodic structure, it is conceivable that a singer/poet learned lists of collocations unconnected syntactically, without the distinctive poetic rhythms, and that these collocations were fitted to one of the five verse-types learned at some other time, later or, perhaps, earlier. It seems much more probable and, in fact, essential that the two structures (inasmuch as they were divisible) were learned simultaneously, that aspects of one controlled and shaped the other, that they were interdependent, and that the absence of one necessarily
affected the other. Any attempt to recreate the OE verse without command or use of either one or the other must, by necessity, fail, and, the result of such an attempt ought, therefore, to be regarded as a pale and imperfect approximation of its original inasmuch as fidelity to that original is the sole criterion of aesthetic judgement. Such attempts should not be treated as evidence of a continuous tradition, if one is speaking in terms of the continuity of a technique of verse-making, of OE poetic craft, and not of efforts to reproduce a vaguely remembered form without the necessary technique. From the point of view of either prosody or formulaic structure, there is insufficient reason to regard the "Soul's Address" as "classical" OE verse.

However, the most striking prosodical feature in the "Soul's Address" does not concern the alliterative lines, perhaps, but rather those lines in the poem whose verses are linked by rhyme or assonance. Much has been made of the rhymed verse in eME poetry. Its presence has been cited as evidence of a fundamental change in poetic technique usually thought by those who argue for the continuity of the alliterative tradition to have been brought about by the subterranean influence of a popular style of verse that supposedly thrived unrecorded alongside the OE alliterative verse. Blake's criticisms of these theories are well taken, however: there are no examples of such verse extant; eME verse (or "rhythmical alliteration" as Blake calls it) was literary in nature, not popular; the persistence of alliteration is left unexplained; the fact that the eME "evidence" for this popular tradition is found only in the west of England is also unexplained. Further, it must be acknowledged that rhyme was an intermittent feature in OE verse and prose, though not one that superseded or replaced alliteration as a
means by which the verses of the line were linked together. 98

There are about forty lines in the "Soul's Address" that show
rhyme, assonance, or, to a much smaller extent, consonance, as their
sole means of linkage. (There are a number of lines where either rhyme
or alliteration or both may be serving a function in establishing the
line.) In fifteen of these cases, four rhymed or assonant pairs recur
in substantially the same lines: lif - sip, eight times; 99 agon - fornon,
three times; 100 efre - nefre, twice; 101 sunne - wipinne, twice (?). 102
In other words, one could say there are twenty-nine different instances
of rhyme or assonance linking lines together in the poem, which, in fact,
is Oakden's figure. 103

The recurrence of the pairs cited above in substantially the same
lines throughout the poem offers one clue to the use of these lines and
of rhyming lines in general in the poem. On each occasion when the
lif - sip pair, or the agon - fornon and efre - nefre pairs occur, they
serve, through their different prosodical form, to halt the progress of
the description in the alliterative verses, and often they also signal
a modulation in focus in the work. Because of their different prosodi-
cal form, in other words, the poet seems to employ rhyming lines to
signal structural changes in the poem. For example, I. C(G)25, a wurpe
hire wa  blet heo spekinde was so, might be taken as a summation of
the lines preceding it. Line B(F)26, so by wecre mid sunne  iset al
wipine, serves to introduce the tenor of the metaphor of the hedgehog
begun at I. 21. The wrecche sip-sori lif lines, besides effectively
halting the progression of the alliterative lines preceding them, also
serve as a kind of refrain reinforcing and restating throughout the
poem its basic theme of damnation. 104 The occurrence of pairs of
rhyming lines at the two points in the poem, ll. D(B)44-5, peo swetnesse
is nu al agon, p(et) b<ittere> be bip fornon; / p(et) bittere ilastep
affre, pet swete ne cump be <æffre>, and ll. G(E)39-40,<nu> is biin
mup forscutted for deap hine hauep fordutted, / ne b<ip> he ne <nam>pare
undon or cume bes heise kinges dom, both intensify the halting effect
of the single rhyming lines and restate the apocalyptic theme. And in
the penultimate fragment, six rhyming lines, ll. F(D)38-43, occur in
succession:

forloren þu hauest peo ece blisse, þinumen þu hauest þe paradis:
bicnu>men þe is p(et) holli lond, þen deofle þu bist isold on hond,
for noldest þu nefr<e hæb>en inouh buten þu hearest unifouh;
nu is p(et) swete al agon, p(et) bittere þe b<ich>foron;
p(e) bittere ilast þe efre, þet gode ne cump þe nefre;
þus ageþ nu þe þin sicp after þin ægce lif.

These lines mark the emotional climax of the poem, and, when the
fragments have been reordered in the way proposed below, their position
near the end of the work, rather than in the middle, would seem to
strengthen this view. It does seem clear, that the poet of the "Soul's
Address" used rhyming lines to achieve stylistic effects, to signal
structural changes, and to emphasize one of his basic thematic
interests—damnation; they do not seem to have provided him with a
prosodical alternative to alliteration.

The scansion of the rhyming lines in the "Soul's Address" as a
group appears to be irregular. A number of lines seem to be composed
of verses that correspond, in terms of rhythm, to the alliterative,
verses in the work, e.g., peo moder greoneþ and p(et) b<arin>woaneþ,
If one adopts a somewhat relaxed version of C.B. Hieatt's theory of
hypermetric scansion in OE verse, lines such as these might be scanned
as hypermetric:

\[
\begin{align*}
\text{for} & | \text{loren} \ b\ | \text{hauest} \ \text{peo} | \text{ec} \ | \text{blisse} \ b\ | \text{numen} \ b\ | \text{hauest} \ \text{pe} | \text{paradis} \\
& | \text{bi} | \text{numen} \ \text{be} | \text{is} | \text{et} | \text{holi} \ lond \ \text{ben} | \text{deole} \ \text{bi} | \text{bi} | \text{sold} \ \text{on} | \text{hond} \\
& | \text{for} | \text{noldest} \ b\ | \text{nefr<e>hab>ben} \ \text{inouh} \ | \text{bute} \ \text{hefdest} | \text{unifouh}. \\
\end{align*}
\]

Alternatively, and perhaps preferably, they could be scanned as syllabic
couplets, a possibility suggested by Haufe in the introduction to his
edition of the work and also recommended by Noble in regard to the
rhyming lines of Brut:

\[
\begin{align*}
\text{for} & | \text{loren} \ b\ | \text{hauest} \ \text{peo} | \text{ec} | \text{blisse} \ b | \text{numen} \ b | \text{hauest} \ \text{pe} | \text{paradis} \\
& | \text{bi} | \text{numen} \ \text{be} | \text{is} | \text{et} | \text{holi} | \text{lond} | \text{pen} | \text{deole} | \text{bi} | \text{bi} | \text{sold} | \text{on} | \text{hond} \\
& | \text{for} | \text{noldest} \ b\ | \text{nefr<e>hab>ben} | \text{inouh} \ | \text{bute} | \text{hefdest} | \text{unifouh}. \\
\end{align*}
\]

Syllabic scansion also seems to provide a framework that renders such
lines as D(B)17 and G(E)39 explicable:

\[
\begin{align*}
\text{hwi} | \text{noldest} | \text{b<e>|penchen|me} \ \text{peo}|\text{hwi} | \text{ic} | \text{was}|\text{innen}|\text{pe} \\
& | \text{ne} | \text{bip|hne|<nam>more|undop} \ | \text{mr}|\text{cume} | \text{pas|heige|kinges|dom}. \\
\end{align*}
\]

The syllabic rhythm of some of the rhyming lines in the poem may
indicate a desire on the part of the poet to accentuate the rhyming
words in the line by creating verses that mirror one another rhythmically. This mirroring is apparent not only in the lines susceptible to syllabic scansion, but also in some lines whose verses exhibit alliterative rhythms, e.g., line C(G)33 and line G(E)49 quoted above. It is not, however, a universal feature. The poet's apparent use of syllabic couplets reflects back on the prosodical structure of the alliterative line. The fact that he could treat the language the way he does in the rhyming lines, from the point of view of stress, tends to strengthen the notion that his line was more diffuse than its OE counterpart, its nature less thoroughly established by the heavily stressed syllables alone.
IV
Style

The author of the "Soul's Address" has not been accorded much praise for his stylistic achievements. He is not, however, quite as artless a poet as it might at first appear. The portrayal of a soul addressing its body after death obviously involves an expanded use of prosopopoeia, a rhetorical figure that the medievals found particularly fascinating. In the English literature that precedes the "Soul's Address," "The Dream of the Rood" comes to mind as an outstanding example of the use of this figure along with the Exeter Book Riddles and, of course, the Old English "Soul and Body" poems. In the context of 'body and soul' literature, however, a speaking soul (and a speaking body, in the case of debate) constitutes not so much a rhetorical device as a convention, a fundamental feature of the form that creates opportunities for the use of certain rhetorical devices while limiting the possibilities for the use of others. The author of the "Soul's Address" avails himself of a number of traditional rhetorical figures and devices in the composition of his poem, and he achieves a style which is distinctive, if not exalted.

The most striking stylistic feature of the "Soul's Address" is repetition. Though examples of other basic types of rhetorical devices can be found in the work (some of which will be listed below), it is clear that the poet sought to move his reader or auditor and to convey
to him the import of his work primarily through the repetition of words, phrases, and whole lines. And by examining patterns of repetition, particularly those of significant words, one can understand, to some extent, the compositional strategy or impetus that lies behind the poem. Each of the fragments can be divided into quite clearly defined subsections (not marked in the MS.) in which the focus of the poet's commentary (in Fragment A) or the soul's address (in Fragments B through G(E)) is accentuated by the repetition of key words and sometimes by other devices, especially kinds of balance and antithesis that are themselves often established by repetition. It seems clear that the poet was consciously employing rhetorical devices to define these subsections of his work: the repeated elements change with the usually abrupt shifts in focus, and brief summarizing statements, often rhyming or assonant lines, usually signal the end of one subsection or the beginning of the next. As a rule, in the soul's address proper the focus of the subsections alternates back and forth between the current state of the body and its actions in life. However, though one can generally detect these shifts in focus without difficulty, the precise reason for many of the developments in the work remains unclear.

Perhaps the finest passage in the "Soul's Address" from the point of view of style, and one which displays the characteristics of that style at its best, is the soul's relation of the body's refusal to take communion while living, 11. D(B)20-29:

20 Noldest þy maþxen læfe wip ilærede men, 
  giuen ham of þine gode þet heo þo fœre> beden.
  Heo mihthen mid salmeonge þene sumne acwenchen, 
  mid <xo>re messe þene misteden fore biddan;
  hœo mihthen offrian loc leofli<che> for þe,

25 swupe deorwurpe lac, licame cristes;
  þur> þær> pu were ales<e> from helleweife,
and mid his reade blode þ(et) he ȝeat on rode.
Bo þu we<ref>ifroed to farene i(n)to heouene,
ac þu fenge to þeowdom þurh þæs ðeg<ref>ofles> loren.

The first two lines establish the context of what follows: the refusal to participate in religious activities, the primary focus of ll. 20-29, and the avaricious nature of the body, reasserted in the lines immediately following the passage in question. One can see a three-fold balancing of ll. 22 and 23: mid salmsonge/mid <cho> re messe, ðine sunne/þine miseden, acwenchen/biddan, and further, fore biddan in l. 23 echoes fo<ref>beden in l. 21, both occurring in final position in their respective lines. Line 24 repeats the opening phrase of l. 22, heo mihten, and loc, in final position in the on-verse, balances both salmsong and messe of the previous lines. The term loc also both intensifies the beneficial nature of that which the soul has lost and introduces the idea of Christ's sacrifice. The beneficial nature of the host is amplified by 24b, leofliche for þe, and by the phrase swype deorwrpe that precedes the repetition of loc, i.e., lac, in l. 25, once again in final position in the on-verse; the host's sacrificial attribute is made explicit in 25b, licame cristes. Lines 26 and 28 balance one another in the on-verse by means of anaphora—bo were ales<ref> ðu we<ref>ifroed—and also, in the off-verse, through the restatement of the same idea from antithetical viewpoints—from hellewite / to farene i(n)to heouene. Line 27 introduces the other key element of the communion sacrament, the blood, with rhyming verses, blode / rode, so that ll. 26 and 28, besides balancing one another, each follow a line in which one of the eucharistic elements is named. In l. 29 the adversative ac, the movement from subjunctive to indicative mood, and the word þeowdom in the same position as the participles of opposite
meaning from 11. 26 and 28, alese< and ifreoed, mark the end of the passage, an abrupt return from what might have been to what is. The citation which follows signals a shift in focus to the avaricious nature of the body.

This subsection of the "Soul's Address" is unusual for its density of rhetorical patterning, however. Very different is the following subsection, 1. 30 to the end of the fragment, one of the most diffuse in the poem. The focus shifts rapidly from the greedy nature of the body, to the disgust of the friends, to the grave and worms, to a pair of rhyming lines contrasting the transitory nature of earthly joy with the eternal nature of suffering in hell. The chiastic pattern of the concluding rhyming lines, 11. 44-45--sweetnesse, bitternes / bittere, swete), the repetition in 1. 40 (on deope sabe on durelease huse), and the repetition of lufedest in final position in the off-verse in both 11. 35 and 43 (epitrophe) are all striking rhetorical features, but repetition and other devices are, nevertheless, comparatively rare in these fifteen lines. That this scarcity of repetition coincides with an impression of diffusion and rambling is probably not accidental.

Other passages clearly established by the repetition of key words and phrases are 11. B(F)1-15 on the refusal of the body to take confession; 11. B(F)22-33, the amplification of the hedgehog simile expressed in 11. 20-21; 11. E(C)23-37 concerning the house of the living body and that of the dead; 11. E(C)38-50 and F(D)1-8 on the assault of the worms on the corpse; 11. G(E)12-52 on the Last Judgement, particularly towards the end of the passage, and, embedded in it, 11. 17-35 on the care of the body which refused, while living, to hear the various signals that might have led to salvation and will now hear instead the
heard dom on Judgement Day.

Among the other particularly noteworthy rhetorical features in the poem are the following:

1. Asyndetic isocolon with epanaphora: 11. A17-21, Him deaeb ba aren, him dimmep <per> eisen, / him scerpeb be neose, him scrinckep ba lippen, etc.

2. Prosopopoeia, the personification of death: 11. A11, B(F)16, F(D)44, G(E)38.

5. Citation of authority, mostly examples of oraculum: 11. B(F)43-45, B(F)49, C(G)19-21, C(G)34-36, E(C)20-22. G(E)40-42, G(E)45-46, G(E)50, ?B(F)2.

6. The ubi sunt (or quid profuit) passage: 11. D(B)4-11.

8. Eophonesis, i.e., exclamations expressing emotion: 11. A13-14, B(F)4, C(G)3, D(B)19, E(C)10.

9. Puns: 11. A23, C(G)51, E(C)27, F(D)20, G(E)51.

11. Place, i.e., repetition of a word with a new meaning after the intervention of one or a few words: 1. G(E)22, be <we] tuhte his hearpe, and tuhte be to him.

13. Periphrasis: most examples, such as ballewite, 1. D(B)26, foptston.

1. C(G)37, salmson; 1. D(B)22, heapedbonne; 1. F(D)5, and
bedstrau, 1. F(D)14, are commonplace; a few, earfepsip, 11. A41 and
43, soulehus, 1. A22, and perhaps goldfat, 1. D(B)7, may derive from
OE verse; dramburl, 1. G(E)30, and the problematical qualehold,
1. D(B)42, may be original coinages of the poet.

Also of interest from the point of view of style are a number of
verses and whole lines that occur more than once in the work. Some of
these may have a formulaic or quasi-formulaic stature: e.g., on deope
seape on durelease huse, 11. D(B)40 and G(E)8; bu were leas and luti
and unriht lufedest, 11. D(B)2 and F(D)28; wowe domes and guites feole
obre birefested rihte istreones, 11. C(G)11-12 and G(E)19-20;
purh bas deofles; lore, 11. C(G)14, C(G)43, D(B)29, and G(E)21; be drihten
weren lobe or he was drihten ful lob, 11. C(G)18, C(G)50, and G(E)23.

Other repeated lines indicate stages in the development of the work.
Variations of the line get saib peo soule soriliche to hire licame
mark changes in the focus of the soul's address, particularly towards
the end of the poem: 11. E(C)2, F(D)17, F(D)26, G(E)3, and G(E)36.

Whether the repetition of this line was employed to produce a cumulative
climactic effect or to impel forward to a conclusion an already long
work is not clear. From the standpoint of style, however, the repeated
rhyming or assonant lines are of particular importance in the "Soul's
Address," for they fulfill not only a structural but also a thematic
function by expressing in a brief, almost proverbial, manner summations
of the significance of particular passages in the work and of the work
as a whole.

The opening twenty-eight lines of Fragment A, portraying the birth
and death of man in general, conclude with the line bonne bip b(st)
wreche lif iended al mid sorì sip which separates them from the
ensuing description of the preparation of the corpse for burial.

Variations of this line recur throughout the work, always in similar
pivotal circumstances: 1. B(F)19 between the soul's description of
the body's refusal to confess and the simile of the hedgehog; 1. C(G)6
between a passage on the damnation of the soul and one on the particular
sins of the body's tongue; 1. E(C)15 between the description of the
corpse's new house, the grave, and the portrayal of the worms' assault
on the corpse; 1. E(C)3' dividing a revelation of the ingratitude of
servants and friends and a most thorough description of the worms'
voracity; 1. F(D)9 between the description of the worms' voracity and
the cleansing of the body's former residence; 1. F(D)16 between the
passage on the cleansing of the house and the soul's description of
the body's blindness to its eventual fate; and finally 1. F(D)42 as
the culmination of six rhyming or assonant lines all dealing with the
loss of eternal bliss and the prospect of eternal woe. The line serves,
as Dorothy Everett suggests, as a kind of refrain that "emphasizes a
main idea of the poem," and it works quite successfully as a striking
counterpoint to the repetitive and sometimes overlong subsections of
the poem it concludes or introduces.

The other repeated rhyming or assonant lines in the poem seem to
serve a similar function. The line so bu wecre mid sunne iset al
wipihne, 1. B(F)26, is used to divide vehicle from tenpr in the ampli-
fication of the hedgehog simile; as 1. F(D)48 it may be viewed as either
a summation of the previous five lines on the fractious nature of the
living body or an introduction to the next passage, the last two lines
of the Fragment F(D) and what has been lost from the beginning of
Fragment G(E). It also "emphasizes a main idea of the poem" as do the
lines, *bet swetnesse is nu al agen, b(ete) b<ittere> be b(e) fornmon /
b(ete) bittere ilâste<e> affre, bet swete ne cume<e> be <e>affre>. As 11.
D(B)44-45, this pair of lines seems to serve as a conclusion to a rather
diffuse subsection of Fragment D(B), i.e., 11. 30-45; as 11. F(D)40-41,
it appears as part of the series of rhyming or assonant lines mentioned
above, 11. F(D)37-42. Each of these six lines in itself encapsulates
one of the key themes of the poem; together they act as the emotional
climax of the work because of their terse quality and their distinctive
prosodical form. The poet clearly intended that they should perform such
a function and therefore grouped them together in this manner.

The use of repetition and other rhetorical devices, coupled with
the employment of rhyming and assonant lines, defines the style of the
"Soul's Address." However, mention must be made of two features remarkable for their relative absence. The poet does not use *litotes,*
understatement, an omission interesting because it is such a common
rhetorical device in Old English verse. Also, he tends to avoid words
and phrases of description, amplification, and embellishment. Certain
terms in keeping with the tone of the work occur with some frequency,
e.g., *ful "foul," lüber "loathsome," wrecche "wretched,"* and variations
of "sorry," "sorrowful," etc. For example, variations of the latter
occur seven times in the first twenty-eight lines of Fragment A; *ful
is used three times in 11. F(D)5-7 and in 1. 5 the verb *afullen* occurs
as well. For the most part, however, the poet either leaves his nouns
undescribed or uses adjectives so worn that they have little impact on
the imagination: e.g., *dime opyn, 1. A42, on hoile wisdome, 1. B(F)43,
mid hearde wordes, 1. C(G)22; somewhat stranger are on bureless bus.
11. D(B)40 and G(E)8, and *hungrie found, 1. E(C)89.* As a result, his
work takes on a stark, almost ascetic quality. This lack of description may arise from an inability to handle the more intricate rhetorical figures in a metrical context. Certainly the amplification of the hedgehog simile, ll. B(F)22-33, is a laboured and unpromising affair. It must be allowed, however, that the poet might have made a conscious decision to reduce the aesthetic appeal of his work by keeping amplification to a minimum, thereby enhancing his overriding didactic purpose. If this was his intention, he has certainly succeeded; there are very few passages in the poem where the manipulation of language is such that one might be seduced into disregarding the moral import of what is being said.
Sources and Structure

It is quite well established now that the medieval 'body and soul' poems have their antecedents in the prose versions of the theme, and one can indeed discover similarities of detail and tone between the English and Latin prose works that contain addresses made by souls and the Worcester "Soul's Address to the Body." One can also find short addresses of souls to bodies. However, there is nothing in the prose 'body and soul' literature really comparable to the Worcester poem if one makes this comparison with a view to solving the fundamental structural problem caused by the disassembly of the MS., i.e., what is the correct order of the fragments that remain? Therefore, while the belief that the "Soul's Address" and the early 'body and soul' poems in general represent poetic responses to prose expressions of the theme need not be challenged, it is more profitable, when the discussion focuses on structure, to examine the poem in the context of the other extant metrical versions, particularly those written in English, and particularly the English addresses that were popular in the Old and early Middle English periods. The extent to which the writers of 'body and soul' poems had access to the works of other poets we cannot know. A substantial number of works have survived, however, and it is clear in some cases that their creators were aware of a verse tradition exemplifying the 'body and soul' theme. In regard to questions of structure
and form, it was in the other poetic treatments of their theme that these
men found models from which to copy and diverge. Before examining the
poetic versions of the 'body and soul' theme, however, we must look
briefly at the key monuments of the prose tradition that do remain in
order to establish, as best we can, the context out of which these
poetic versions, and specifically the Worcester "Soul's Address,"
developed.

It is generally agreed that one ancient work that does lie behind
the development of the 'body and soul' theme in the Latin and vernacular
homiletic prose of Western Europe is the apocryphal, Visio Sancti Pauli,
a work probably of Coptic origin, written in Greek not later than
250. It was ascribed to Paul in what is likely a later preface.

The Visio was a very popular work in the Middle Ages, probably second
only to the canonical Revelation as a source of information about the
afterlife. Of particular importance to the development of the 'body
and soul' theme was the Visio's initial section, chapters 1-18, a
summary of which Antonette Healey conveniently provides in the Intro-
duction to her edition of the Old English translation of the work:

Opening with a quotation from 2 Cor. 12.2-4, in which
St. Paul speaks of his rapture to the third heaven, P
evokes the appropriate visionary atmosphere. An
account of the discovery of the revelation in a box of
marble under the foundations of Paul's house in Tarsus
(1-2) is a prelude to hearing the contents of the work.
The vision proper then begins (3), narrated in the
first person, with Paul's statement that the voice of
God came to him, commanding him to chastise these
people for their transgressions. Paul learns (4-6)
that not only God but also the elements are weary of
the sinfulness of man. The sun, the moon and stars,
the seas, the waters, and the earth are only checked
from destroying man by the mercy of God. The voice
further describes (7-10) how the angels report to God
twice a day, at sunrise and sunset, concerning the
deeds of men. A guiding angel then carries Paul to the third heaven (11-12) to see the places of the righteous and the damned. During the journey, he notices a group of evil spirits who dwell beneath the firmament of heaven. In addition, he sees two bands of angels, angels without mercy and angels with radiant faces, who function as psychopomps, those who lead out the souls of the dying. Paul then requests to see the deaths of a good man and a sinful man (13), and as he looks down from heaven, the world appears as nothing to his eyes. He looks again (14) and sees a good man about to die with all his deeds lying about him. As his soul leaves the body, it is met by psychopomps, both good and evil, but only the good angels have control of it. The good angels encourage it; its guardian angel praises it; its spirit comforts it. On the way to heaven it is challenged by wicked powers who search it in vain for "something of ours." When the soul is brought to God, its guardian angel and its spirit testify to its goodness, God commands it to be given to Michael and brought to Paradise. The outgoing of the wicked soul (15-16) follows a similar pattern. This time, however, the evil angels snatch the soul at the moment of death. Likewise, the evil powers meet it on its way to heaven and claim it as their own. The soul is carried to God's throne, where its angel and its spirit testify against it. God rejects it and the soul is handed to the angel Tartaruchus to be punished. A second wicked soul is then brought before God (17-18), who laments that it has been tormented by merciless angels for seven days. However, it denies having sinned until confronted by its guardian angel with a list of its sins and by those whom it has injured. The soul finally acknowledges its guilt and is handed over to Tartaruchus.

The work goes on to present portrayals of righteous and wicked souls after death and immediate judgement; it concludes with a vision of the garden of Eden.

Even from this brief summary it should be apparent that the "Soul's Address" differs greatly from that part of the Visio Sancti Pauli that concerns us. Not to be found in the "Soul's Address" is the elaborate superstructure of extraterrestrial beings: the psychopomps, the guardian angel, and the spirit separate from the soul itself; also missing is the journey past the powers of the air to heaven where immediate judgement
is rendered by God in the presence of the heavenly host. The "Soul's Address" is incomplete and some mention of this superstructure may have been lost, but it would have been a jarring development in the work had it been made. The soul in the "Soul's Address" refers repeatedly to the devil who apparently led the body astray, and there are extended references to the soul's origin in heaven, to its position in the broader cosmological scheme as well as to its eventual damnation and punishment, but there is no indication in what remains that any journey of the soul after death will be described to any great extent: the focus is, by and large, on the actions of the body and the sorrows of the soul in the life that has just ended. Also missing from the "Soul's Address," though of primary importance in the Visio, is the balancing portrayal of the righteous soul. Once again, the fragmentary state of the "Soul's Address" makes it impossible to say with complete assurance that such a balancing portrayal never occupied a place in the work, but it will be argued below that it is unlikely that there ever was one.

For the purposes of this discussion, special attention must be paid to Chapter 15, of the Visio, the departure of the wicked soul from its body:

And he said unto me: Look down again upon the earth and wait for the soul of a wicked man going forth of the body, one that hath provoked the Lord day and night, saying: I know nought else in the world, I will eat and drink and enjoy the things that are in the world. For who is he who hath gone down into hell and come up and told us that there is a judgement there? And again I looked and saw all the despising of the sinner, and all that he did, and they stood together before him in the hour of necessity: and it came to pass in that hour when he was led out of his body to the judgement; that he said: It were better for me that I had not been born. And after that the holy angels and the evil
and the soul of the sinner came together, and the holy angels found no place in it. But the evil angels threatened (had power over) it, and when they brought it forth out of the body, the angels admonished it thrice, saying: O wretched soul, look upon thy flesh whence thou art come out; for thou must needs return into thy flesh at the day of resurrection to receive the due reward for thy sins and for thy wickedness.\textsuperscript{124}

A number of features should be taken note of here. First, it is apparent that the soul, rather than or as well as the body, is guilty and this guilt is apparent not only in the initial statement in the chapter but also throughout the opening section. Secondly, it should be noted that the soul in the Visio does not actually address the body; it speaks a single line upon leaving the body and that is all. Thirdly, the evil angels who have power over the wicked soul tell it three times to look at the body it has just left since it must return to it at the Last Judgement. It is Silverstein's opinion that this admonition, which is balanced by a similar statement made by the good angels to the righteous soul, is the basis of the 'body and soul' theme in later literature.\textsuperscript{125}

Batiouchkov believes that the 'body and soul' material of the Visio Sancti Pauli was transmitted to the west not in a redaction of that work itself but rather in another ancient work known as the legend of St. Macarius.\textsuperscript{126} Three late versions of this legend survive: two in Latin and one in Old English (of which there are two copies).\textsuperscript{127} In the version which Batiouchkov knew,\textsuperscript{128} Macarius of Alexandria relates the visions of a monk who sees first a wicked, then a righteous soul exiting from their respective bodies, a reversal of the order in the Visio. As in the Visio, there is a superstructure of angelic and demonic beings that come into play at the point of death; however,
immediate judgement has already been rendered so that, in the case of
the wicked soul, no guardian angel or spirit appears and no journey to
heaven occurs, though on their way to hell the soul and its vanguard of
demons do come close enough to heaven for the soul to ask "Ubi est ista
claritas?" and be told by his companions that it was his original home:
"Nonne cognoscis patriam tuam unde existi quando fuisti in peregrina-
tione?" This passage may be related to statements on the origin of the
soul in the Visio. Not found in the Visio is the role of the devils at
the point of death. As the body begins to change colour and the face
begins to sweat, they attack the body, stabbing the eyes, mouth, and
heart in retribution for the particular sins each committed. This
relation of specific parts of the body to specific sins in the context
of the 'body and soul' theme, or something similar, may lie behind the
recurring references to parts of the body in the "Soul's Address," e.g.,
11. C(G)11-25, E(C)16-22, G(E)17-35.

In this homily the wicked soul expresses the opinion that the body,
and not itself, is to blame for their damnation, but its statements are
thoroughly discredited by the context as well as by what appears to be
the demons' rejoinder that serves to divide the soul's address into two
parts:

Heu mé, heu, me, quare unquam in corpore iIldud tene-
brosum et pessimum ingredierunt—Ve tibi, misera
anima, quare pecumias et alienas facultates et sub-
stantias pauperum tuisti et congregasti in domo tua!
Tunc bibebas vinum et nimis decorasti carnes tuas
illustrissimis vestibus et pulcherrimis.—Tu eras
secunda, o caro, et ego maculenta; tu eras virens et
ego pallida; tu excahillarist (sic) et ego tristis;
tu ridebas et ego semper piebas. Mno eris exca
veratum et putrede pulvere, et requiescar modicum
temps, et me dedumisti cum flatu ad inferos.
(Alas for me, alas for me, why did I ever deserve
to enter that gloomy, wicked body! (Woe to you,
wretched soul, why did you carry off the money and
belongings of others and the goods of paupers and
accumulate them in your own home! You drank wine
then and over-adorned your body with most glorious
and beautiful clothes.) Flesh, you were fat and I
was thin; you were vigorous and I was wan; you were
merry and I was sad; you laughed and I always wept.
Now you will be food for worms and dust's decay.
You will rest for a little while, but you have led
me with weeping to hell.)

Also, after the soul has been told what the brightness is that it sees
on the way to hell, it laments ever leaving that original home to go
down into the body, its Egypt. It is then swallowed by the devil in
the shape of a dragon and vomited into hell. Therefore, there occur in
this work two short addresses by the wicked soul: one of condemnation to
the body and one of self-pity. More interest in what the soul might
say in this remarkable situation is evident in the Batiouchkof homily
than in the Visio Sancti Pauli, and this increased interest probably
results, given the didactic intention of the homilist, from a desire to
arouse some degree of apprehension and terror in the auditor about last
things.

The other Latin version of the St. Macarius legend occurs in the
pseudo-Augustinian "Sermones ad Fratres," Sermon 69. In this version
only the wicked soul is portrayed, but this portrayal follows the earlier
work quite closely; the soul's lament before entering hell is somewhat
expanded. The "Sermones" are particularly rich in expressions of the
'body and soul' theme. In Sermon 56 a brief reference is made to the
reunification of the soul and body on Judgement Day; in Sermon 58 on
the transitory nature of earthly glory, following an ubi sumt passage, a
rotting body is depicted, its soul in hell. The decomposition of a
a dead body is also portrayed in Sermon 48. However, perhaps the most interesting piece, from the perspective of the body and soul theme, is Sermon 49, a work characterized by sudden shifts in the focus of the preacher's vitriolic attack and by a consistent, accusatory tone and severely dualistic statements on the relation of soul to body.

The sermon begins with an attack upon life, vita, and targets for attack throughout the piece are variously life, the world, and the devil; however, the preacher is primarily concerned with castigating the flesh, caro, which is depicted at every turn as the enemy of the soul:

> Caro inimica est animae: quae si inimica non esset, non utique dilexisset istius saeculi vanitatem, et vita vana non frueretur. . . . O caro misera, quid habes, quid agis, quid tantum gravas animam, quae nihil desiderat nisi Deo servire? . . . Anima nostra carcerem patitur, caro eam tenet inclusam.

(The flesh is the soul's enemy; if it were not the enemy, it would certainly not delight in this world's vanity, nor enjoy life's emptiness. . . . Miserable flesh, what have you got, what are you doing? Why do you weigh the soul down so heavily, when it only wants to serve God? . . . Our soul suffers in prison; the flesh holds it shut up.)

At only one point is there any indication of the soul's culpability in its own and the body's damnation: Et scito, anima, dum corpus tenebrosum et fetidum reficiebas atque fovebas, escas verminus praeparabas. (By, when you refreshed and pampered the shadowy, disgusting body, understand soul, that you were preparing food for worms.) This statement comes, however, in the midst of an assault on the flesh. Toward the end of the work God is portrayed speaking to the flesh, claiming that it (not the soul, apparently) was created in his image, and at the conclusion a soul addresses its body:
these words may not have been archaic (or quite so archaic) when the
"Soul's Address" was first composed, i.e., the early twelfth century or,
perhaps, the late eleventh.

105 Perhaps sone and seobben were meant to alliterate in this line,
in which case both rhyme and alliteration would be present.

106 Constance B. Hieatt, "A New Theory of Triple Rhythm in the Hyper-
metric Lines of Old English Verse," MF, 67 (1968), 1-8. The use of
certain rhyming lines in the "Soul's Address" to highlight various themes
of the poem is reminiscent of the way in which hypermetric lines are
sometimes employed in Old English verse; see, e.g., "The Wanderer," ll.
to Death, which are characteristic features of the poetic versions of
the theme. Within this passage a number of phrases occur which are
strikingly similar to ones in the Old English "Soul and Body" as well as
a few that are reminiscent of lines in the "Soul's Address." No direct
structural relation to the "Soul's Address" is apparent, however. The
'body and soul' passage edited by Zupitza is a variant of the portrayal
of the blessed soul in the Förster work.

This cursory examination of the prose tradition of the 'body and
soul' theme provides us with a broader context in which to study that
theme's poetic manifestations. It allows us to see the features that
have been taken from the prose tradition and incorporated into the poetic
tradition as a whole and the "Soul's Address" in particular, for it alone
among the extant English poems preserves some of these features. This
brief examination of the prose treatments of the theme also allows us
to see the differences between them and their verse counterparts.
Batiouchkof admitted that some intermediary work must have stood between
the St. Macarius legend and the Old English "Soul and Body" though no
such work has come to light as yet. Louise Dudley pointedly omits
the English verse tradition from her study of the Egyptian antecedents to
the Occidental versions of the theme. Those Egyptian elements which can
be discerned even in the Old English prose--most clearly in the Thorpe
and Napier homilies which are themselves versions of the St. Macarius
legend--are not significant features in the English verse tradition.

Further, as we have seen, these prose versions occur, for the most part,
as exempla in homilies, and, as such, they have been shaped with greater
or lesser skill to the specific needs of the homilist:
actual address of the soul to the body is short:

\[\ldots\ v\ a\ me\ e\ a\ r\ m\ r\ e,\ h\ a\ t\ i c\ a\ f\ e\ r\ e\ g\ e\ b\ o\ r\ e\ n\ s\ c\ e\ o\ l\ d e\ w\ u\ r\ a\ n\ d,\ o\ d\ e\ h\ a\ t\ i c\ a\ f\ e\ r\ e\ s\ c\ e\ o\ l\ d e\ n\ i\ m\ n\ e\ a\ r\ d\ u n g- s\ t\ o\ w\ e\ o\ n\ p\ i\ s\ f\ u\ l\ e\ s\ t\ a\ n\ d\ o\ n\ p\ i\ s\ w\ y\ r\ s\ t\ a\ n\ l\ i\ c\ h\ a\ m\ a n,\ p\ e\ w\ a\ s\ a\ n\ y\ m\ e\ n\ d\ e\ e\ a\ r\ m\ r\ a\ m\ a\ n\ n\ a\ s\ t\ a\ o n\ u n\ r\ i\ h\ t.\]

\[e\ a\ l\ a\ b\ u\ \ d\ a\ r\ m a\ l\ i\ c\ h\ a\ m a\ a\ n\ d\ w\ u\ r\ m\ a\ m\ e\ t,\ a\ p\ u\ w\ u\ n\ n e\ a f\ e\ r\ o\ l\ i c\ u m\ w\ e\ l\ u m,\ a\ n\ d\ a\ o\ u\ g\ e\ g\ l\ e\ n\ g\ d\ e\ s\ t\ p\ e\ m\ i\ d\ e\ r\ o\ l\ i c\ u m\ h\ r\ a\ g\ l\ u m\ a n\ d\ f\ o\ r\ g\ e\ a\ t\ e\ m.\ p\ o\ n\ n e\ o\ u\ \ w\ e\ r\ a\ g\ a\ n\ d\ r\ e\ o\ d\ a n d\ g\ o\ d\ e\ s\ h\ i\ w\ e,\ p\ o\ n\ n e\ w\ a\ s\ i\ c\ b\ l\ \ a\ c\ a n d\ s\ w\ y\ o\ \ o\ u\ r\ o t;\ p\ o\ n\ n e\ b\ u\ s\ m\ e\ r\ c\ o\ d e s t\ a n d\ h\ l\ o\ g e,\ p\ o\ n\ n e\ w\ e\ o p i c\ b\ i\ t\ e r l i c e.\ e\ a\ l a\ b\ u\ e\ a r m a\ l\ i\ c h\ a m a,\ n u\ b u\ s c e a l t\ g e w\ u r\ o\ a n\ t\ f\ u\ l a n\ h\ r\ a\ w e\ a n d\ w\ y r\ m u m\ t o\ m e t e; a n d\ i c\ m i d\ s a r e\ a n d\ m i d\ g e\ o m e\ r u n g e\ s c e a l\ t\ o\ h e l l e\ b e\ o n\ g e l e d.144\]

As in the Latin examples of this version, mention is made of the soul's birthplace that is, in its greatly expanded form, such a curious feature in the "Soul's Address," 11. B(F)34 and C(G)29-31. Also of interest is the short address made by the soul in the Napier homily before the exemplum of the departing soul occurs:

\[\ldots\ h\ w\ a t\ d e s t\ b u,\ l a\ f\ l a s c,\ o\ d\ e\ h\ w\ a t\ d\ r i h s t\ b u\ n u? h\ w\ a t\ m i h t\ b u\ o n\ p\ a\ t\ i d\ p\ e a r f e\ w e p a n? w a\ d e\ n u,\ o\ u\ p e\ p e o w e s t\ d\ i s s e r e\ w o r u l d e\ a n d\ h e r\ o n\ g a l n y s s e\ l e o f a s t. h w i\ n e\ f o r\ h t t a s t\ b u\ d e\ f y r e n e\ e g e s a n\ a n d\ p e\ s y l f u m\ o n d r a t s t\ s w i d l i c e\ w i t u,\ p a\ d r i h t e n\ g e o\ d e o f l u m\ g e w o r h t e,\ a w y r g e d u m\ g a s t u m,\ w o m m a\ t o\ l e a n e s?145\]

The opening lines of this statement are very reminiscent of lines found in the Old English "Soul and Body" and in "Judgement Day II," the source of the latter generally being attributed to Bede.146 Similar lines do not occur in the "Soul's Address," however.

Different from the Napier and Thorpe homilies, but also occurring at the time of death, are the addresses of a righteous and a wicked soul presented as an exemplum in a homily edited by Morris.147 The passage begins with the soul, i.e., every soul, penning up the various organs
of the body, actually carrying out the physical death of the body. The righteous soul, which is sorry to leave its body, speaks first, then the wicked soul. The addresses themselves are brief and undistinguished and are followed by a description of the fate of the wicked man's worldly possessions:

\[\text{be frendmen him biwepeð gef anie ben. bigemeð þe licame; and forgemeð þe sowle. þanne fon uncuðe men to þe aihte þe arure his waren. aise þe boc seið Relinguent alienis divitis suas. Hie bileueð uncuðe men þe aihte þe hie Forleiten habbeð. þe man is uncuð þe ober't þe nele nahl him crownen. ne helpen him gief he neod haueð. þus doð þe libbende frend to-genes þe liggende. Gief þe quiæ haueð aihte þe were þe dedes ætture. þe he him biqueð. þo he him seluen habben ne mihte. þe quiæ hem doð him selue to note. and nohte deades sowle to note.}^{148}\]

This is not part of the soul's address proper, but it is clearly related to the misuse of worldly possessions mentioned so often in 'body and soul' literature and to the attitudes of the living to the dead that seem to have been of particular interest to the English poets who explored the theme, e.g., ll. A39-40, D(B)4-16, F(D)10-15; "Soul and Body I," ll. 57-60. It should also be mentioned that the 'body and soul' passage in this homily is virtually unique in its relative unconcern for Last Judgement, for the punishments or rewards for soul and body.

It seems clear that the "Soul's Address" takes place at the time of death or shortly thereafter: the final line on f. 63\(^{v}\), \textit{ponne besihip þeo soule soriliche to ben lich<ame>} (l. A45), indicates a physical detachment of soul and body at the outset of the address; the references to burial customs on ff. 63\(^{v}\) (ll. A30-36) and 65\(^{v}\) (ll. F(D)10-14) also make it seem likely that death has just occurred, as do the Signs of Death listed on f. 63\(^{v}\) (ll. A16-21). In most of the Latin prose versions, we
have seen that addresses of the soul to the body also occur soon after death. In the Old English prose passages, however, two other possible times of address are found. In two similar homiletic exempla edited by Willard, both a blessed soul and a damned soul return to their respective bodies at some time of respite between death and Last Judgement to either praise or condemn as the case may be. The damned soul accuses its body of sin in the usual fashion and then bemoans its fate:

Wa me, forðam ic þa awirgedan þinc mid ðe lufode! Wa me, forðam ic þa toweardan þingc ne gemundel! Wa me, forðam ic me þellewite ne ondred! Wa me, forðam þe ic heofonarice ne lufode! Wa me, forðam þe ic gepafode ealle ða yfel þe þu dydest! Forþon ic nu for ðinum gewyrhtum eom cwylmed, and for þinum yfelum dædum ic eom on hellewitude becgon. Ic wes Godes dohter, and angla swistro gescapan, and þu me hafest forworht, þet ic eam deofles bearn, and deoflum gelic. Forþon ic ðe wrege and þe ofercyme mid warrignesse, forþam þu me forworhtest and awergedne gedydest.

The references to the soul being the daughter of God closely parallels l. C(G)31 of the "Soul's Address." In both homilies the blessed soul offers a similarly structured statement of the opposite sentiments.

In three Old English homilies edited by Assmann, Förster, and Zupitza, the addresses of the souls to their bodies take place on Judgement Day. The passage in the Assmann piece, where a damned and a blessed soul address their respective bodies, is quite short and of no particular significance to the "Soul's Address" when examined from the point of view of structure. The 'body and soul' passage in the Förster homily is distinctive among the Old English prose versions for its length and its rambling style. Eleanor K. Heningham has drawn attention to the use of memento-mori themes and devices within the context of the 'body and soul' segment of the work, e.g., an ubi sunt passage, an apostrophe
to Death, which are characteristic features of the poetic versions of
the theme. Within this passage a number of phrases occur which are
strikingly similar to ones in the Old English "Soul and Body" as well as
a few that are reminiscent of lines in the "Soul's Address." No direct
structural relation to the "Soul's Address" is apparent, however. The
'body and soul' passage edited by Zupitza is a variant of the portrayal
of the blessed soul in the Förster work.

This cursory examination of the prose tradition of the 'body and
soul' theme provides us with a broader context in which to study that
theme's poetic manifestations. It allows us to see the features that
have been taken from the prose tradition and incorporated into the poetic
tradition as a whole and the "Soul's Address" in particular, for it alone
among the extant English poems preserves some of these features. This
brief examination of the prose treatments of the theme also allows us
to see the differences between them and their verse counterparts.

Batiouchkof admitted that some intermediary work must have stood between
the St. Macarius legend and the Old English "Soul and Body" though no
such work has come to light as yet. Louise Dudley pointedly omits
the English verse tradition from her study of the Egyptian antecedents to
the Occidental versions of the theme. Those Egyptian elements which can
be discerned even in the Old English prose—most clearly in the Thorpe
and Napier homilies which are themselves versions of the St. Macarius
legend—are not significant features in the English verse tradition.

Further, as we have seen, these prose versions occur, for the most part,
as exempla in homilies, and, as such, they have been shaped with greater
or lesser skill to the specific needs of the homilist:
In the Anglo-Saxon homiletic tradition the meeting of Body and Soul was presented as an episode in a long sermon that often contained other themes of death. . . . But in the twelfth century a development took place in the Body and Soul tradition . . . whereby the theme, instead of being a short and isolated anecdote, became a large and flexible framework, with all the traditional death themes accumulated into the reproach of the soul. This transition was of very great importance, firstly, because through it separate themes became organized into a dramatic whole, and, secondly, because the tone inevitably changed, for what before had been a rhetorical and objective description of a preacher became, when spoken by the soul, entirely filled with a personal vindictiveness and horror.156

As a literary form, the address of the soul to its body was transformed in the movement from prose to verse and it is not surprising, therefore, that the prose versions that remain do not provide us with much useful information on the questions of structure that are so vital in the case of the fragmentary "Soul's Address."

The Worcester "Soul's Address to the Body," when viewed from the perspective of English medieval 'body and soul' poems, stands out as a rather unusual and idiosyncratic work. It is the largest and also the most comprehensive of these works, containing, as it does, all the important details and motifs generally associated with 'body and soul' poetry, leaving aside the basic formal distinctions of address and debate. It contains a number of features found in only one or two other poems; it is the one Middle English version which can be shown to have some relation, albeit distant, to the Old English "Soul and Body."

However, the "Soul's Address" also contains a number of features that do not occur in the other extant 'body and soul' poems (some are found in the prose traditions, others not), and one must wonder what position these features took in the original structure of the work and whether or
not we can re-discover that original structure by examining that which remains in the light of both the verse and, to a lesser extent, the prose tradition of 'body and soul' literature.

Unlike the homilies in which 'body and soul' passages occur, the primary focus in the poems is the 'body and soul' material itself. This is especially true in the addresses in which the body does not respond to the soul's accusations: the most important of these addresses are the Old English "Soul and Body," the "Soul's Address," and the early thirteenth-century "Latemest Day." In the later thirteenth-century debates, "Als y lay in a winters nght" and "In a thestir stude," and to some extent in the "Latemest Day" as well, concern with the depiction of torments in hell begins to vie with the more usual 'body and soul' material for the primary focus of the work. Incorporated into all the poems are features often associated with the 'body and soul' theme in the homilies: e.g., the *ubi sunt* passage which occurs in all the Middle English versions, though not in the Old English "Soul and Body"; the passage on the friends of the dead similar in tone to that in the Morris homily; the depiction of the grave and worms which occurs in the Old English "Soul and Body" though not as part of the soul's address proper, but which is in the "Soul's Address" and the later works. As a form, the 'body and soul' poem broadens to incorporate a number of related features from the prose tradition.

The scope of the English poems, particularly the addresses, seems narrower in relation to the prose versions in many ways. The superstructure of angels and devils, the concern with the depiction of the journey of the soul, etc., have been largely eliminated or at least subdued. Yet, at the same time, the scope of the poems is broader than
the prose versions, not only structurally, because of the incorporation of the features mentioned above, but also in terms of the realism brought to the portrayal of the soul in its predicament.\textsuperscript{160} The souls in the English poems, and especially the addresses, once again, seem to be more conscious than their prose counterparts and more willing to complain about their predicaments. Therefore, the potential exists for increased psychological and physical realism as the soul portrays the body's past life and current state and bewails its own past life in the body and current state of turmoil. One must not exaggerate the presence of realism in medieval poetry, but within the limits set by the 'body and soul' theme, the English poets of the addresses do tend toward it. Neither the combined narrowing and broadening of scope nor the increased realism that results are so apparent in the debates where the rejoinders of the body to the soul serve to move the work toward the realm of dialectic, argument, and reason, engaging thereby the intellect of the auditor, even giving rise, at some points, to humour. The physical and psychological details are enclosed within the schema of the debate and much of their force is lost, even though the concluding depictions of hell torment, one of which also occurs in the "Latemest Day," are exceedingly gruesome.\textsuperscript{161} In the addresses there is, at least superficially, some reason to doubt the orthodoxy of the sentiments put forward by the speaking souls and, therefore, perhaps an unvoiced appeal to the theological understanding of the auditor; but the primary goal of these poets is not the investigation of argument or the stimulation of intellect but the arousal of feelings of foreboding in the auditor through the portrayal of the lost soul in a dialogue of one, unable to communicate with its body and condemned by this silence, and by its own
excessive complaining, as effectively, and a good deal more affectively, as by the rejoinders of the bodies in the debates. 

In all the longer 'body and soul' poems in English, the 'body and soul' material itself is contained within a framing device of some sort. The confrontation between soul and body is set within a context established at the beginning of the work. In the Old English "Soul and Body" and the "Latemest Day" this context is eschatological; all men are encouraged to think of last things both at the beginning and at the end of both works. In the Latin and Old French debates and "Als y lay in a winters night," the context is visionary in nature:

Als y lay in a winters night
In a droupening biforn be day
Me pou3t y seige a selli sigh,
A bodi opon a bere lay. 163

The opening of "In a thestrei stude" recalls a chanson d'aventure. 164 The tone of the concluding statements in the debates is eschatological, however. In neither case, address or debate, is the framing device obtrusive. In the "Soul's Address," we cannot be sure what exactly the context is from what remains of f. 63v. 165 To judge from the earlier and later addresses and from the general tone of the statements in the first fragment, one would suspect it is eschatological; however, the apparent concern with the creation in the opening lines of f. 63v strikes one as an unusual feature for a 'body and soul' poem. It does seem certain, however, to judge from the extant 'body and soul' literature as a whole—not just the English poems—that there must have been a closing statement, probably exhorting the reader to piety in the usual fashion, which has not survived. For a 'body and soul' poem to end without a return to the framing device would be unprecedented, and,
therefore, it is almost certain that something, at least one leaf, is missing from the end of the MS.

Turning from the framing device to the 'body and soul' material itself, we can see that the features that the "Soul's Address" has in common with all the 'body and soul' poems, address or debate, are found primarily on ff. 64 and 55. It is there we find the ubi sunt passage (11. D(B)4-11) not found in the Old English poem but present in the three other Middle English poems of substantial length. It is there we find that universal feature of medieval 'body and soul' literature, the description of the grave and worms (especially 11. E(C)29-50 and F(D)1-8). It is there we discover the most forceful descriptions of the attitudes of the living to the dead body (11. D(B)10-16; D(B)37-39; E(C)16-18; E(C)32-36; F(D)10-15). Concentrated on ff. 64 and 65, though occurring elsewhere as well, are the descriptions of the body's sins in life (11. D(B)20-21; D(B)32-34; E(C)23-28; F(D)27-36; F(D)45-48; G(E)18-28). Accusations of this type are found in all the poems of any length, and some indication of the body's actions in life is found in almost every 'body and soul' poem. Also on f. 65 we find much concern expressed about judgement and damnation and, at the bottom of f. 65, the Last Judgement is described, a feature that also occurs in all the longer 'body and soul' poems. Compared to the later Middle English poems, in which the emphasis on the apocalyptic implications of man's activity in life, on judgement, and on hell torment is greatly increased, this description in the "Soul's Address" and the one in the Old English "Soul and Body" are quite tame. In "Als I lay in a wintres nigth" and "In a thesthi stude" the passages dealing with hell torment and judgement occupy as much space as the rest of the 'Body and soul' material combined.
It must be added, as would perhaps seem logical, that the longest and most intense of these descriptions in each poem comes near the end of the poem followed only by a brief return to the framing device.

Concentrated on ff. 63 and 66 of the "Soul's Address" are a number of features that must be judged unusual from the point of view of the extant 'body and soul' material. Some of them do occur in prose versions but, by and large, without the development they receive here. The remains of the poem begin with the end of what must have been a short statement on the creation that served as a preamble to the depiction of the joining of body and soul. Mention is made in other poems of birth and the body's condition at birth, but in no poem is the image of birth and the relation of the pain felt then to the pain of death given such an extensive treatment. This concern with creation in general and with the joining of body to soul is amplified considerably on f. 66 where we find passages dealing with the creation of the soul in the context of the universal creation (ll. B(F)34-50) and the marriage of the soul to the body at baptism in which mention is made of the soul's being the daughter of God and of the lost children of the soul and body, probably their good deeds (ll. C(G)27-56). The soul's creation and its familial relation to God are briefly discussed in some prose versions, as we have seen; it is not a key feature in the English poems, however, though brief references to the creation of the soul occur in the Old English "Soul and Body" and in the Latin poetic version "Noctis sub silentio." To judge from what remains, this poet, atypically, is as concerned with the creation and origin of the soul as he is with its judgement and damnation; in the later works, as mentioned above, the focus narrows to a concern with the later aspects
of the soul's career.

Other features that appear unique to the "Soul's Address" also occur largely on ff. 63^v and 66. On f. 63^v are found the Signs of Death (ll. A16-21) which recur in the "Latemest Day" in a shorter form. 167

On f. 66^v is found an extended simile in which the body and its sins are compared to the hedgehog and its quills (ll. B(F)20-33); this does not occur in other "body and soul" poems. Near the bottom of f. 66^v there appears a reference to the body "withsaking" the devil (l. C(G)47), a clear indication that there was a time in the life of the body when it was not a sinner. This is unparalleled in English "body and soul" literature; as a rule, the soul depicts the body as wholly bad and no mention is made of a time before sin, a time of relative innocence. The devil also plays a unique role in this poem; he actively participates in the corruption of the body (especially ll. G(E)17-30). In the other "body and soul" poems, the devil or devils torture the soul after death as they do primarily in the prose; in the "Soul's Address" references to the blandishments of the devil and the slavery of the body to him occur throughout. Also occurring throughout the work and not elsewhere in the English "body and soul" poems are references to the particular sins of the bodily organs. Primarily singled out are the ears (ll. G(E)17-30) and the tongue (ll. C(G)9-26); the eyes, surprisingly, are not mentioned in this manner.

There is no English "body and soul" poem sufficiently close to the "Soul's Address" to enable us to judge precisely how these many features enumerated above were bound together into a single structure. In "The Grave" a short fragment of roughly the same date, a number of lines occur that are very reminiscent of certain lines in the "Soul's
Especially striking are the 11. 9-10 of "The Grave,"

\[\text{be helewages beo\l lage, sidwages unhege;} / \text{be rof bi\d ibylc bire broste ful meh, compared to 11. E(C)30-31, lowe beop <pe> helewewes, unheige beop be sidnowes;} / \text{bin rof liip on bine breoste ful loh. Also of interest are 11. D(B)39-40, er bu beo ibrouht ber bu be <on> scalt,} / \text{on deope sape, on duelease huse, in relation to 1. 5 of "The Grave,"} \]

\[\text{Nu me be brinse\d ber bu beon scelalt, and 1. 13, Durelease is pet huse and dearc hit is wi\dnnen. There does seem to be some relation between the works, but what it is cannot be determined.} \]

Though it certainly does contain many of the features associated with 'body and soul' poetry, there is no overt proof that "The Grave" should be so classified, nor is its distant, universal tone typical of an address of a soul to its body. "The Grave" provides little evidence as to the original structure of the "Soul's Address": in the comparison of a work of twenty lines with one of 350, one is clearly limited.

It would appear that the poet who wrote the early thirteenth-century "Latewest Day" was familiar with the "Soul's Address," to judge from the significant number of verbal echoes of the earlier work in the later: e.g., 1. 76 of the "Latewest Day," \text{we wule swopen pin hus,} and 1. F(D)10 of the "Soul's Address," \text{nu me wule swopen pine flor; 1. 79, Nu be sculen wormes wunien wi\dinnen, and 1. E(C)26, p<et> bu scoldest mid wurmen <wunien> in eorpam; 1. 45, Ne schaltu neauer sitten on holstre ne on benche, and 1. E(C)26, ac bu aete on pine benche underl\d mid pine bolster.} 

However, if the "Soul's Address" was indeed a primary source for the "Latewest Day," the later poet largely recast the structure, eliminating virtually all the references to the creation while expanding the emphasis on the pain of hell concentrated at the
end of the work. In each of the four MSS. where the "Latemest Day" occurs, it is preceded by the poem "Doomsday" so that it might be argued that the soul's address in the poem has become a feature of a larger apocalyptic work. In the Middle English debates, "Als y lay in a winters nigt" and "In a thestri stude," given their increased emphasis on hell torment and the Last Judgement, the 'body and soul' material might almost be viewed as a vehicle by which the poets could proceed to these descriptions, though a vehicle far more interesting and aesthetically pleasing than that which follows.

Therefore, while the "Soul's Address" contains many features that do link it with other English 'body and soul' poems as well as many features that make it distinctive, there is no obvious source or analogue that allows us to place the fragments in what is clearly the correct order. Must we, therefore, be content with the order of the fragments Phillipps established in the nineteenth century? Or can we examine each fragment again in the light of what we know of 'body and soul' literature in order to establish the most probable order of what remains? We know from the evidence of the MS. that f. 63 precedes the other three leaves of verse and that f. 63 contains the first part of the "Soul's Address." We can also be quite certain that recto can be distinguished from verso on ff. 64, 65, 66 and that, in the current order, the leaves are facing the correct way around. The problem lies with the order of the final three leaves.

Buchholz, the only previous editor who addresses the question of order, argues that the similarity in subject matter between the last lines on f. 64 and the opening lines on f. 65 renders it likely that f. 65 does, in fact, follow f. 64. In a poem in which repetition is
a key stylistic attribute, one must exercise caution in ascribing structural significance to a given feature that may, in fact, recur at almost any point in the poem—even in this case it can be argued that Buchholz is correct. The description of the worms ravaging the dead body at the bottom of f. 64\(^\ddagger\) (ll. E(C) 38-50) is very specific; it portrays them attacking various parts of the body:

\{
heo wulde\(\) gnawen pine bon,
heo orlese wur\(<\)mes>. Heo winde\(\) on \(\)in armes,
heo breke\(\) pine breoste and boriep \(\)\(\)urh)\(\) of er al,
<heo creopep in and ut: \(\)pet hord is hore owen.
And so heo wulde\(\) waden wide in \(\)ich wombe,
todelen pine \(\)ermes heo be deore weren,
lifre and pine lihten lode\(<\)liche\> torende\(\)n,
and so scul formelten mawe and \(\)in milte.
\}

The same sort of specificity occurs at the top of f. 65\(^\ddagger\) (ll. F(D)6-7):
heo wulde\(\) wurchen hore hord on pine heawedponne,/\(\)heo bileafen pine lippen unfreten. This may be taken as the completion of the passage begun on f. 64\(^\ddagger\). Elsewhere in the poem the references to the worms' voracity are more general, e.g., ll. C(G)4, D(B)41, E(C)28, F(D)24.

Also, on f. 65\(^\ddagger\) we find l. F(D)3, <puc> sacht nu herborwen unhob wibte, i.e., the worms, which is quite likely an ironic reverberation of l. E(C)23, <noi> deat bu on pine huse herborwen \(\)eo wrecchen, on f. 64\(^\ddagger\), and would, therefore, probably occur after it. If we can accept, then, that f. 65 does, indeed, follow f. 64, we are able to eliminate four possible orders of the final three fragments: 65-64-66, 65-66-64, 66-65-64, as well as 64-66-65 in which the separation of the two leaves would significantly disturb the continuity Buchholz noticed. Two alternatives remain: the current order and 63-66-64-65.

No one has yet come forward in print to offer an explanation of
the current order of the "Soul's Address." The commentary on the literary qualities of the work has been sparse. This is not very surprising, however, because no underlying structural principle is readily apparent in the current order of the fragments. To move right to the heart of the matter, there seems little justification after the material on ff. 64 and 65--the ubi sunt passage, the recurring condemnation of the body's activity in life, the grisly description of the worms at work in the grave, the lengthy consideration of the consequences of sin, i.e., the eternal damnation that body and soul will receive on Judgement Day--for the poet to begin an extended passage, interspersed with further accusations, on the soul's role in creation and on the birth and youth of this particular man. Yet this is what the current order presents in the movement from f. 65\(v\) to f. 66\(v\). It does not lend itself to either explanation or explication. A defense of it would have to rely on a belief in the poet's tendency toward prolixity and his obscured notion of structure. One might explain the material on creation, birth, and baptism as a digression from which the poet must have proceeded to yet another depiction of the Last Judgement before returning to the framing device of the work. One could point to the fact that in "Als y lay in a winters nigt" the soul's speech begins with an ubi sunt passage and further argue that in the prose versions any references to the soul's origin tend to come near the end of the 'body and soul' passages.

Such a defense is not without problems, however. The ubi sunt passage in "Als y lay in a winters nigt" does occur at the beginning of the soul's first speech and early in other poems in general; however, one does not occur at all in the Old English "Soul and Body" nor is it
the first thing the soul says in the "Latemest Day"; the ubi sunt passage may have gradually moved to its initial or early position in 'body and soul' poems and need not have occurred in such a position in the "Soul's Address." The statements on the origin of the soul in various prose versions of the 'body and soul' theme are interesting for the details they provide, but they do not tell us much about the structure of this poem. These passages in the poem are greatly expanded in comparison to the analogous passages in the prose versions, and further, the poet has treated the origin of the soul differently from the prose writers in a way we shall see shortly. Finally, in its current, imperfect state, the "Soul's Address" is approximately twice as long as any other of the English 'body and soul' poems, earlier or later, address or debate. Only debates such as the Latin "Nuper huiuscemodi visionem somnii" and "Noctis sub silentio" and the French "Un Samedi par Nuit" rival it in length and do so largely on the basis of the increased scope that the debate format provides. In English, the 'body and soul' poem appears to have been regarded as a short form. If the material on f. 66 is viewed as a digression, the "Soul's Address" in its original form would probably have stretched to over five hundred lines in length, and perhaps even longer given the poet's tendency to recapitulate. While this is not, of course, impossible, it must be considered unlikely.

The alternative possible order—63-66-64-65—has not been examined in any printed account, but it goes a long way toward removing the problems presented by the current order. It brings the "Soul's Address" more into line with other English 'body and soul' poems in terms of structure (though it does remain, as mentioned above, an
idiosyncratic work). It also establishes more strongly within the work a chronological, quasi-narrative structure. The concern with chronology is noticed by Ricciardi, but she fails to see or, at least, entertain the possibility that an adjustment in the current order of the fragments serves to strengthen that aspect of the poem and give it a unity it otherwise lacks.

When f. 66 is placed in the second position, the "Soul's Address" moves from its introductory lines with their general description of birth, death, and the time immediately following death to the voice of the soul castigating the body in the context of a lament on its implantation therein:

\[ os \meu(m)\ a(pe)rui\ et\ attraxi\ sp(iritu)m, \]
\[ pul... ... ]<dest\ pin\ mub> and drowe me to pe. \]
Walawa and wa is me p(et) ic efre com to pe, for nold<est\ pu> mid\ pine\ mube\ bimemen\ pine\ neode, ac efre\ digelliche\ pu\ wold<est\ ham> biderman.\]

Lines B(F)34-50 on f. 66 describe the creation and the soul's particular place in it and f. 66 ends with a lengthy description of the body receiving the soul, their marriage, i.e., baptism, the body's apparent initial rejection of the devil, the subsequent capitulation, and the resultant loss of the bearn, i.e., the good deeds the soul and body should have done together (ll. C(G)27-56). Though the poem cannot be neatly summarized because of the recurrent castigation of the body and the general diffuseness of the poet's style, the primary line of development on f. 66 is chronological.

On ff. 64 and 65 the accusations continue; the emphasis shifts to the deserts of the body, moving first to its worldly possessions (the \textit{ubi sunt} passage (ll. D(B)4-11), the acquisition of these goods by
others (11. D(B)12-16, E(C)9-14, E(C)33-36)), then to the body itself, the culmination of that particular concern being the putrefaction in the grave (11. E(C)38-50, F(D)1-8). This key description of the putrefying body ends on f. 65\textsuperscript{r}, as we have seen, and the primary focus shifts on f. 65 to the damnation of the soul and body and the loss which entails, culminating in the Last Judgement. The former predominates on f. 65\textsuperscript{r}: Forloren bu hauest þeo ece blisse, binumen pu hauest be paradis/þecnymen þe is þ(et) holi lond, þen deofle þu bist ðasold on hond (11. F(D)37-38); the latter on f. 65\textsuperscript{v}, 11. G(E)30-52:

\textit{ite maledicti in ignem eternum}

Ponne sculan wit sicbiens to alre seorwe mest, faren mid feondes in þet eche fur, beornen þer efre, ende nis þer nefre, et q(uit) bona egeru(n)t ibu(n)t in uita(m) et(er)na(m), ponne <scule>n þeo goden mid gode sipian, echeliche wunien i(n) alre wuldcere mest>.

In the alternative ordering of the leaves proposed here, then, the soul's address begins with its creation and initial life in the body, describes in some detail, though not chronologically, its torment in the body, and ends with its damnation on Judgement Day. The body is simultaneously seen moving from birth, old age, and death on f. 65\textsuperscript{v} to putrefaction and its eventual damnation on ff. 64-65.

Is there any justification for accepting this order in the "Soul's Address" in any of the other 'body and soul' poems? In fact, it can be argued that the Old English "Soul and Body" has a structure roughly analogous to the "Soul's Address." In it, the soul returns to the body at a time of respite. It begins castigating the body and, near the outset of its speech mentions that it was sent to the body from heaven: \textit{Hwæt, þe la engel ufan of roderum/sawe onsende þurh his sylfes}
hand, ll. 27-28; it portrays its torment in the body, mentioning that worldly possessions proved useless after death; it points out that it would have been preferable had the body not been born a human; it ends with a description of soul and body at the Last Judgement. The portrayal of the worms' assault on the body occurs after the address, just before the end of the poem. In the Latin 'body and soul' debate "Noctis sub silentio", the soul's initial speech, made before the auditor realizes that the body will respond, also has a structure roughly analogous to the Old English "Soul and Body" and the alternative order of the "Soul's Address." The soul begins with a general condemnation and assessment of the body, then talks of its own creation before moving on to a description of its torment in the body; then follows an extended ubi sunt passage, an estimation of the body's present quarters, the grave, and a portrayal of the reactions of the living to the corpse. Near the end of this initial speech, references are made to the eternal damnation that will follow the Last Judgement and mention is made in the last line but one of the worms that gnaw the body.

One cannot press these structural analogies too hard, and it is certainly not being implied here that there is any direct relation between these three poems. However, it is interesting and instructive, nevertheless, that the references to the origin of the soul in both "Soul and Body" and "Noctis sub silentio" occur near the beginning, that the portrayals of the decomposing bodies come near the end, that the visions of the Last Judgement, as is the case in all 'body and soul' poems, occur at the end (of the poem in "Soul and Body," of the soul's first speech in "Noctis sub silentio"). It is also interesting to note that on f. 66 of the "Soul's Address" no mention is made of the decomposed
Body that has been described so vividly on ff, 64-65. The tongue is
described as ascorted, 1. C(G)9, but this would follow from the Signs
of Death on f. 63\textsuperscript{v}, 1. A19; it is not a Sign of Decomposition.\textsuperscript{176}
Whereas in the other 'body and soul' poems the horrific details—either of
the putrefying body or hell torment or both—occur near the end of each
work, where they can achieve their optimum effect, in the "Soul's
Address" of the current order such descriptions are buried in the centre
of the poem. In the revised order, the passage describing the activity
of the worms comes towards the end of the poem, the prelude to the
consideration of Last Judgement and damnation. Further, if the assess-
ment made above concerning the function of rhyming lines in the poem
is correct, i.e., that they serve a stylistic function, breaking up the
flow of the alliterative verse, thereby arresting the attention of the
auditor,\textsuperscript{177} the passage of six consecutive rhyming lines on f. 65\textsuperscript{v},
ll. F(D)37-42, can be seen as the emotional climax of the address, and
of the poem itself:

\[
\text{Forlorn pu hauest peo ece blisse, binumen pu hatest pe paradis;
beicnume pe is pet holi long, pen deofle pu bist isold on bond,
for noildet pu nefre<e hab>ben inouh buten pu hefdest unifouh;
nu is p(et) swete al agon p(et) bittere pe bicge fornou;
p(et) bittere ilest pe efre, pet gode ne cume pe nefre;
pus agep nu pu<in sip> after pin wrecce lif.}
\]

In the alternative order proposed here, these lines would come near the
end of the work, followed on f. 65\textsuperscript{v} by the vision of the "Last Judgement";
in the current order, they, like the portrayal of the putrefying corpse,
lie in the center of the poem, their effectiveness wholly undercut by
the long discussion of the origin of the soul and its implantation in
the body which follows on f. 66.
The reordering of the last three leaves of Worcester Cathedral MS. F. 174 so that current f. 66 is placed between ff. 63 and 64 is put forward here as an alternative. Without the evidence that a clear source or analogue would provide, no final choice can be made as to which order is correct. This easiest avenue to knowledge of the original structure of the "Soul's Address" being blocked, however, it is clearly better for the critic to pursue admittedly less preferable and less precise ways to establish what that structure probably was than simply to throw up his hands. And it is the view of this writer that, when the remains of the "Soul's Address" are examined from the perspective of the structure of thematically similar works, particularly other English 'body and soul' poems, the alternative order of the fragments is clearly preferable to the current one. The problem for the editor, of course, is whether or not the superiority of the alternative order is sufficient to justify offering it as the text of the poem instead of what has been heretofore accepted virtually without question.

The current order is not defensible on the basis of an evaluation of its intrinsic merits. One could argue, however, that, since this order cannot be proved incorrect beyond a shadow of a doubt, the status quo ought to be maintained and any alternatives to it be brought forward in an introduction. This approach would appear to be the safest method an editor could adopt: to have his cake and eat it too. To print the alternative order is to run the risk of error and embarrassment; but, nevertheless, it is proper for the editor to attempt to put forward what he believes is the best version of the work in front of him.

In writing on the authority of Old-English poetical manuscripts, Kenneth Sisam has the following to say about conjectures:
The difference between a better reading and a worse is, after all, a matter of judgement; and however fallible that faculty may be, the judge must not surrender it to the witness. To support a bad manuscript reading is in no way more meritorious than to support a bad conjecture, and so far from being safer, it is more insidious as a source of error. For, in good practice, a conjecture is printed with some distinguishing mark which attracts doubt; but a bad manuscript reading, if it is defended, looks like solid ground for the defence of other readings. So intensive study with a strong bias towards the manuscript reading blunts the sense of style, and works in a vicious circle of debasement. 178

And George Kane has the following to say on conjectural emendation:

In the case of the ordering of the "Soul's Address" fragments, one is clearly dealing with a larger problem than either Sisam or Kane was considering, but the principle remains the same. Though it has always been readily apparent that, in dealing with the "Soul's Address," one is dealing with the fragments of a manuscript reconstructed in the nineteenth century, no scholar since the publication of the last complete edition by Buchholz in 1890 has even mentioned parenthetically that the order of the leaves established by Phillipps might be questionable, let alone
wrong. The two most recent editors of the work have both failed to investigate the possibility of an alternative order at all. In short, to judge from the printed evidence, scholars have acquiesced in accepting the current order without question as the correct one. This edition, therefore, presents the fragments in the alternative order, which, it has been argued, is significantly more probable than the order printed heretofore, so that the reader, whether or not he be convinced by the reasons for this decision, will be inescapably confronted with this fundamental problem when dealing with the poem.

In conclusion, it is necessary, and not purely a matter of speculation, to consider what might be missing from the "Soul's Address." It has already been stated that, after the soul finishes speaking, the poem almost certainly would have returned to the framing device with which it began. The failure to do so would be an unprecedented structural feature for a 'body and soul' poem. It was also briefly indicated above that it was unlikely that a balancing portrayal of a righteous soul was ever a feature in the "Soul's Address." The poem as it stands is by far the longest 'body and soul' poem in English; the addition of a balancing address by a righteous soul would double the length at least, and, to judge from the evidence of the other works, the existence of a 'body and soul' poem of this length, perhaps 1000 lines, would have to be considered an unlikely prospect. Further, only the Old English "Soul and Body I" provides any indication that the English poets were interested in such balancing portrayals, and the integrity of this address by a blessed soul vis à vis its relation to the depiction of the damned soul has recently been questioned; it should probably be considered a later, less skillful addition. Perhaps the
best argument against the possible inclusion of a portrayal of a righteous soul in the "Soul's Address" depends on the introductory material on f. 63r. It concentrates primarily on the painful nature of birth and death and the ingratitude of friends. It seems suitable only to introduce an address by a wicked soul, but there is no indication on f. 63r that the soul of the man who has died is, in fact, wicked, i.e., it is a general description, but one that stresses pain and suffering. It is not probable that such a dreary introduction could serve to introduce an address by a righteous soul. One feature which possibly is missing is a description of the sins of the eyes to balance those of the tongue and the ears, ll. C(G)9-26 and G(E)17-31. It seems unlikely that the tongue and the ears could be singled out for condemnation in a medieval work and the eyes ignored, since the eyes were considered the chief organs by which man sinned. In some of the prose versions discussed above, the devils attacked the eyes, heart, and mouth of the dying man as retribution for the specific sins each wrought. It is conceivable that other organs as well were also mentioned in a lost portion of the "Soul's Address."

30 See V, "Sources and Structure," below.

31 Ker, who usually notes the arrangement of leaves in gatherings, says nothing in this regard about Worcester Cathedral MS. F.174 (Catalogue, pp. 466-67). He does say that the leaves of the MS. are "bound up in the correct order, except that f.10 should precede ff.2-9" (p. 466), and he offers, without caveat, the collation reproduced on p.3 above. His statement is certainly accurate for the first sixty-three of the MS.'s sixty-six leaves, and it is, perhaps, based more on an appraisal of them than of the final three leaves that are of special concern to the editor of the "Soul's Address."

It is interesting to note that, despite the regularity of pattern that can generally be found in the arrangement of leaves in gatherings in early English mss (see Ker, Catalogue, p. xxv), the investigators of lacunae and possible lacunae in these mss seem to ignore the evidence that such an arrangement might provide. For example, some scholars have suggested that a leaf is missing from the second gathering of The Exeter Book, between ff. 15 and 16, and this view seems to have achieved general critical acceptance since Pope's advocacy of it in 1969 (John C. Pope, "The Lacuna in the Text of Cynelulf's Ascension (Christ II, 556b)," in Studies in Language, Literature, and Culture of the Middle Ages and Later, ed. E. Bagley Atwood and Archibald A. Hill (Austin: University of Texas Press, 1969), pp. 210-19). In that part of his argument that depends on an examination of the MS., Pope pays no attention to the arrangement of the leaves in the second gathering. Ker, however, indicates that in The Exeter Book this arrangement is regular (Catalogue, p. xxv). If, in fact, f. 15v and f. 16v are both flesh sides (f. 15v being a hair side, if Ker is correct), then the theory of the missing
leaf would be placed in some jeopardy; if, on the other hand, f. 15" is a flesh side and f. 16" a hair side, the theory would be provided with stronger manuscript evidence than it has now. The second gathering's supposedly original arrangement ought, at least, to be compared to that of the sixth gathering of The Exeter Book which also has two single leaves folded in with three bifolia.

A case in which the examination of the arrangement of leaves might provide clues for the correct placement of fragments occurs in the second gathering of the Junius MS., only two of whose leaves remain. If there is a consistent pattern to the arrangement of the leaves in the MS., then the exact position that the remaining leaves held in the original gathering could be established with greater precision than they have been up to now. Unfortunately, neither Ker, Gollancz (the editor of the facsimile), nor Doane (the most recent editor of Genesis A) concerns himself with the arrangement of leaves according to hair side and flesh side. However, in the case of the Junius MS., and even more so in the case of Worcester Cathedral MS. F. 174, the fragmentary state of what remains removes a great deal of certainty from the matter.

34 Wilhelm Horn, Beiträge zur Geschichte der englischen Guttural-Laute (Berlin: Wilhelm Gronau, 1901), pp. 91-94.

35 Horn, pp. 89-91, offers a possible phonological explanation for this form; however, it may be a scribal error (Jordan 17 rem. 1).

38 Hall, p. 232.

43 Hall, p. 232.

45 Buchholz, pp. LXII-LXXIV. In the discussion of the poem's prosody, capitalization and punctuation have been omitted from the examples.
A few lines lack dividing punctuation: 11. D(B)28, E(C)10, E(C)31, F(D)3, and G(E)7. These omissions are probably scribal in origin. Metrical pointing is not an uncommon feature in Old English mss. It occurs in the *Junius MS.*, in some mss of Alfric, and in portions of Wulfstan's works as well.

47 Eduard Sievers, "Zur Rhythmik des germanischen Alliteration- 
verses," *Beiträge zur Geschichte der deutschen Sprache und Literatur*, 
10 (1885), 209-314; John C. Pope, *The Rhythm of Beowulf: An Inter-
pretation of Normal and Hypermetric Verse-Forms in Old English Poetry* 
(1942; rpt. New Haven: Yale University Press, 1966); A.J. Bliss, 

48 Oakden's figures, I, 139, based on an analysis of 165 lines 
(7), are seventy-nine lines alliterating xa/ay, forty-three alliterating 
aa/ax, and thirty-seven alliterating ax/ay. The proportions are 
similar; the different totals probably arise from conflicting views as 
to what constitutes deliberate, as opposed to accidental, alliteration. 
It is interesting to note that, while Oakden acknowledges the authority 
of Buchholz's edition, he quotes throughout from Singer's edition of the 
"Soul's Address."

49 Oakden, I, 139, claims that in "Soul's Address" sc does alliterate 
with s and sk but gives no examples. Lines such as B(F)10, 29 and 34 
provide possible, though not unequivocal, evidence to substantiate his 
view. In 1. D(B)34 gr alliterates with g. Of the two other initial 
clusters that Oakden mentions, fl occurs most clearly as an alliterating 
stave in 1. F(D)10, but no evidence supports his notion that cl function-
ed in this manner. Neither cl nor the traditional Old English stave sp 
occur in alliterating position in the poem. 3 alliterates with g in
in most Old English poems, but they are distinct staves in the late "Battle of Maldon."

50 Oakden, I, 140, does find descendents of the OE A, B, and C verse-types in the "Soul's Address"; he calls them respectively Falling, Rising, and Clashing rhythms. The usual rhythm, however, is one he calls the Rising-Falling type, i.e., \( \text{xxx/xx/x} \). Dorothy Everett, p. 27, follows Oakden's categorization. Thorlac Turville-Petre, in The Alliterative Revival (Cambridge: D.S. Brewer, 1977), classifies the "Soul's Address" with Layamon's Brut, "The Grave," and a few chronicle poems as examples of a "loose alliterative style," a kind of verse that shows some of the features of "classical" OE verse but which ought not to be compared to the "classical" form as an inferior or debased derivative, pp. 6-14.

53 The following examples are scanned according to Pope's theories of OE verse rhythm; see The Rhythm of Beowulf and Seven Old English Poems (Indianapolis: Bobbs-Merrill, 1966), pp. 97-138. / \, and \( x \) mark primary, secondary, and low stress respectively (double accents are not used); \( \sim \) marks phonemic resolution; ( ) mark elements in the rhythm taken by rests in Pope's system.

54 Shortening of long \( i \) in trisyllabic \textit{licame} would change the
scansion of this verse slightly; it would remain an A verse, however.

55 This scansion assumes that the first element of the compound has
been shortened.

56 If ðe in gradie has not shortened owing to its position in this
trisyllabic word, then this verse cannot be scanned as an OE verse-type.

57 However, according to Pope, the "only frequent and obviously
approved form" of the A4 verse-type was one with both primary and
secondary stress in the first measure, *Seven Old English Poems*, p. 110,
fn. 25.

58 However, if the low-stressed syllable before the first measure
of this verse is assigned to the preceding verse, the preceding verse
becomes overburdened metrically. Regarding anacrusis in the poem, see
pp. 52ff. below. Also gode would not be resolved in OE verse; however,
it is possible that goð is the correct reconstruction.

59 However, if bonne is regarded as anacrusis, verse G(E)13a becomes
overburdened metrically. Also, shortening of the o in the trisyllabic
compound domesdai would invalidate this scansion.

60 This verse is part of a rhyming line; see pp. 65ff. below.

61 Robert P. Creed, "A New Approach to the Rhythm of Beowulf,"

63 Ibid., p. 30.

65 Ibid., p. 109.

67 Ibid.

68 Thomas Cable, *The Meter and Melody of Beowulf* (Urbana, Ill.)

69 A more probable system of scansion, see pp. 54 ff; below, pushes the figure to fifty-six or fifty-seven percent.

70 Ker, Catalogue, p. 466 (item 398), refers to the work as a "rhythmic-prose text"; Angus Cameron, "A List of Old English Texts," in A Plan for the Dictionary of Old English, ed. Roberta Frank and Angus Cameron (Toronto: University of Toronto Press, 1973), lists it as a prose text, p. 106 (item 3.4.5.).

71 With the one exception of Phillipps, all the previous editors have followed the MS. punctuation and printed the work as verse.

74 Funke, p. 315, estimates only two or three percent of Wulfstan's "two-stress phrases" end with a monosyllabic main stress.

75 Funke, p. 315.

76 It could be reasonably argued that licame in A11b and elsewhere would be resolved and scanned /\ owing to the shortening of i in the first syllable of a trisyllabic word. Resolution is not a reasonable alternative in the other examples, however.

77 Line C(G)41 may be corrupt; l., D(B)6 may be a rhyming line.

78 In OE verse, certain words which were compounds in origin, e.g., hlafor, could be treated as simplex.
Shortening may have brought about resolution in both überliche, D(B)35a, and soriliche, F(D)17b and G(E)3b.

Certain words in these examples would probably contain a secondary stress if scanned from the point of view of OE verse: e.g., lufe, A44a, onfæ, B(F)12b, hole, E(C)41a.

Funke, pp. 316-17.

Kuhn, p. 656.

Kuhn, p. 656.

Pope, Homilies, I, 122.

Lehmann, pp. 102-03.

The prose works examined by means of available glossaries were Pope's Homilies of Ælfric; Arthur Napier's Wulfstan: Sammlung der ihm zugeschriebenen Homilien nebst Untersuchungen über ihre Echtheit, Sammlung englischen Denkmaler in kritischen Ausgaben, 4, 1 Abteilung (1883; rpt. Berlin: Wiedmann, 1966); and Walter W. Skeat's Ælfric's Lives of Saints, 2 vols., E.E.T.S. (O.S.), nos. 76 and 82 (London: N. Trübner, 1881) and nos. 94 and 114 (1890, 1900; rpt. London: Oxford University Press, 1966). Though beyond the scope of this study, a thorough examination of the entire Old English corpus can now be carried out using A Microfiche Concordance to Old English, ed. Richard L. Venezky and Antonette di Pasci Healey (The Dictionary of Old English Project, Centre for Medieval Studies: University of Toronto, 1980).

The words which Oakden, II, 170, finds of special significance for their archaic quality are the compounds earfeaspib, l. A41 and 43, sorimod, l. G(E)16, feorhsib, l. A27, goldfat, l. D(B)7, goldfoh, l. E(C)4, soulehus, l. A22, lifdai, l. A14, weasib, l. C(G)7, and mapemete, l. C(G)4, and the simplexen afsursen, l. G(E)6 and 37, bideled, l. D(B)16, E(C)32, and G(E)9, brostnien, l. G(E)9, fakenliche, l. C(G)21, forscutten, l. G(E)38, fus, l. D(B)15, idol, l. A5 and 8, loc, l. D(B)24 and 25, sep, l. D(B)40 and G(E) 8, lutiy, l. D(B)2 and F(D)28, and sipien, l. B(F)10, C(G)8, G(E)47, and G(E)51. Had he used Buchholz's edition instead of Singer's, he probably would have added seddien, l. C(G)21, to the list. Some of these words do indeed appear to be survivals from OE verse, e.g., earfeaspib, soulehus, and goldfoh; others, e.g., sorimod and lifdai, were quite common in prose and verse in both Old and Middle English. It must be made clear, however, that many of
these words may not have been archaic (or quite so archaic) when the
"Soul's Address" was first composed, i.e., the early twelfth century or,
perhaps, the late eleventh.

94 E.g., dreamburh, l. G(E)30, and the problematic qualehold,
l. D(B)42.

95 See Albert B. Lord, The Singer of Tales (1960; rpt. New York:

96 See, e.g., Oakden, I, 138ff., 242ff., and R.M. Wilson, Early

97 Blake, pp. 118-19.

98 On rhyme in Alfric and in OE poetry, see Pope, Homilies, I,
133, and Kuhn, p. 648.

99 Lines A29, B(F)19, C(G)6, E(C)15, E(C)37, F(D)9, F(D)16, and
F(D)42.

100 Lines D(B)8, D(B)44, and F(D)40.

101 Lines D(B)45 and F(D)41.

102 Lines B(F)25 and F(D)48.

104 Everett, p. 39; see the discussion of rhyming lines below,

105 Perhaps some and seobben were meant to alliterate in this line,
in which case both rhyme and alliteration would be present.

106 Constance B. Hieatt, "A New Theory of Triple Rhythm in the Hyper-
metric Lines of Old English Verse," MF, 67 (1968), 1-8. The use of
certain rhyming lines in the "Soul's Address" to highlight various themes
of the poem is reminiscent of the way in which hypermetric lines are
sometimes employed in Old English verse; see, e.g., "The Wanderer," ll.
107 Haufe, pp. 15-16; Noble, pp. 100-06.

108 R.M. Wilson, p. 171, notes that, in its original form, the poem "must have been a powerful, if gloomy, work" and that in it "some of the descriptions are characterized by considerable vigour and power." Rosemary Woolf, The English Religious Lyric in the Middle Ages (Oxford: Clarendon Press, 1968), p. 94, comments in passing on the "force of the laconic straightforwardness" of descriptive passages in the poem.

109 Everett, p. 39.

110 Cf. l. D(B)8, pin blisse is nu al agon min seorwe is fornon.

112 See Eleanor Kellogg Heningham, "Old English Precursors to the Worcester Fragments," PMLA, 55 (1940), 291-307, as well as the following pages.

115 Francis Lee Utley, "Dialogues, Debates, and Catechisms," in A Manual of Middle English Writings: 1050-1500, III, ed., Albert E. Hartung (New Haven: The Connecticut Academy of Arts and Sciences, 1972), 891-95, lists thirteen separate English works in the category of "The Debate between the Body and the Soul"; a number of these exist in more than one manuscript. Some of the works listed are certainly not debates, however, and a few of them may not be 'body and soul' works,
strictly speaking. Utley also gives some idea of the vast number of non-English works on the theme in his bibliography of 'body and soul' materials, Manual, III, 853-62.

118 Ibid., p. 15, fn. 3.

119 Ibid., p. 3, fn. 2.

120 Ibid., p. 3.

122 In most of the numerous Latin redactions of the Visio, the portrayal of the "going-out of souls" is abbreviated and transferred to the end of the work (Silverstein, p. 60). Besides the visit to Hell, it is the only portion of the original work to survive in the redactions.
Regarding the concept of immediate judgement, see Batiouchkof, p. 41. Dudley, in her work on the Egyptian elements in the 'body and soul' theme, excludes the English poems from consideration, probably because these elements occur, by and large, in portrayals of this superstructure of extraterrestrial beings. Such portrayals are not nearly so significant in the English poems as in other 'body and soul' works, particularly ones written in prose.

Silverstein, p. 23.

Batiouchkof, pp. 5-17 especially.

Batiouchkof provides a text of this homily, pp. 576-76, found in Bibliothèque Nationale no. 2096(52). The MS. is eleventh or twelfth century (Dudley, "Early Homily," p. 293), but the homily itself is considered much older.

Batiouchkof, pp. 576-77; Dudley, "Early Homily," p. 290;

131 This collection of sermons probably dates from the fourteenth century, but many of the works in it are much older. Dudley, "Early Homily," pp. 225-26, claims that Sermon 69 is one of these older pieces; Allen and Calder date it later than the Old English poem, pp. 40-41. Dudley prints the work in her article.

132 Dudley, in "Early Homily," shows that neither Latin version derives from the other; there is a lost anterior version.

134 Ibid., col. 1341-42.
135 Ibid., cols. 1328-32.
136 Ibid., cols. 1332-34.
137 Ibid., cols. 1332-33.
138 Allen and Calder, pp. 45-46.
139 "Sermones ad Fratres," col. 1334.
140 Allen and Calder, p. 47.
141 See Woolf, pp. 93-94, and Mary Heyward Ferguson, "The Structure of the 'Soul's Address to the Body' in Old English," JEGP, 69 (1970), 74.
143 Dudley, "Early Homily," pp. 296-53, shows that the OE version
derives from neither of the Latin versions of the St. Macarius legend.

144 Napier, pp. 140-141.
145 Ibid., p. 138.
146 See Allen and Calder, pp. 208-12.
148 Ibid., p. 183.
149 Rudolph Willard, "The Address of the Soul to the Body," PMLA, 50 (1935), 957-65 (MS. Junius 85; see Ker, Catalogue, item 336, arts. 2 and 6; University Library, Cambridge, MS. II 33; see Ker, Catalogue, item 18, art. 40). Willard, pp. 965-83, discusses the development of the weekly respite from hell torment and the use of Sunday as a universal day of rest early in the Christian era. Silverstein, pp. 79-81, discusses the relation of the concept of weekly respite to the Visio Sancti Pauli.
150 Willard, p. 962.
151 Bruno Assmann, ed., Angelsächsische Homilien und Heiligenleben, Bibliothek der angelsächsischen Prosa, III (Kassel: Georg H. Wigand, 1889), pp. 167-69 (Corpus Christi College, Cambridge, MS. 302; see Ker, Catalogue, item 56, art. 11 and item 153, art 5); Max Förster, ed., Die Vercelli-Homilien: I-VIII Homilie, Bibliothek der angelsächsischen Prosa, XII (1932; rpt. Darmstadt: Wissenschaftliche Buchgesellschaft, 1964), pp. 84-103 (The Vercelli Book; see Ker, Catalogue, item 394, art. 4); Julius Zupitza, "Zu 'Seel' und Leib'," 379-81 (Corpus Christi College, Cambridge, MS. 41; see Ker, Catalogue, item 32, art. 9).
Zupitza prints only the 'body and soul' material, not the whole homily.

153 Among the works which contain 'body and soul' material but which are not described here are Old English homilies edited by Napier and Willard, the Old English translation of the Visio Sancti Pauli, the Latin work that lies behind the Irish homily edited by Atkinson (whose accusation-reply structure was probably fundamental in the development of the debate form), and some Old English poems such as "Guthlac A" and "Judgement Day II." For bibliographical details, see Bibliography 5a.

154 Batouchkof, p. 8.

155 See above, fn. 123.

156 Woolf, p. 93.

158 "Als y lay in a wintors nigh" is often titled "The Debate (Dispute) between the Body and the Soul." It remains, in whole or in part, in seven manuscripts (see Utley, "Dialogues," p. 848). The standard edition is Wilhelm Linow, ed., De Desputisoun betwen pe Bodi and pe Soule, Erlanger Beiträge zur englischen Philologie, I (Erlangen and Leipzig: A. Deichert (Georg Böhme), 1889). "In a thestrie stude" is

160 Concerning the Old English "Soul and Body," Batiouchkof, p. 36, remarks that ". . . nous sommes loin de vouloir nier une certaine originalité de conception dans ce poème . . . , due au talent de l'auteur: comme effet dramatique, comme vigueur et peinture vraiment réaliste des ravages de la mort et de la vanité des aspirations mondaines . . . ."

161 This is particularly true of "Noctis sub silentio" and "Als y lay in a winters nízt"; in "Muper huiuscemodi visionem somnii" and "Un Samedi par Nuit," where the basic structure is accusation-reply, the impression of debate is not as strong.

According to Hans Walther, Das Streitgedicht in der lateinischen Literatur des Mittelalters, Quellen und Untersuchungen zur lateinischen Philologie des Mittelalters, V, 2 Abteilung (Munich: C.H. Beck, 1920), pp. 211-14, "Noctis sub silentio" is found, in one form or another, in 132 manuscripts. It is often referred to as the "Visio Philiberti," but it seems likely that the opening stanzas ascribing the vision to St.
Philibert that occur in some versions of the work are, in fact, a later addition. Nothing resembling a critical edition of the work has appeared; Wright, Latin Poems, pp. 95-106, prints one of the extant versions. Only one copy of "Nuper huiuscemodi visionem somnii" survives; see Heningham, An Early Latin Debate, for an edition of this work. "Un Samedi par Nuit," of which five copies are extant, is edited by Hermann Varnhagen, ed., "Das altfranzösische Gedicht 'Un Samedi par Nuit'," Erlanger Beiträge zur englishen Philologie, I, 1 Anhang (Erlangen and Leipzig: A. Deichert (Georg Böhme), 1889). All three works are generally considered to be twelfth century in origin.

162 See Ferguson, p. 74.

Batiouchkof divides his discussion of debates, pp. 511-78, into sections on visions and non-visions.

164 Woolf, p. 97.

165 Heningham, "Old English Precursors," p. 292, advances the opinion that the "Sanctus Beda" fragment on f. 63r serves as a prologue to the "Soul's Address"; however, this view has gained no critical acceptance and there is nothing in the 'body and soul' tradition to substantiate it. Ricciardi, pp. 208-10, points out the occurrence of two French words in the vocabulary of the "Sanctus Beda" fragment (only the very common messe occurs in the "Soul's Address") as well as some possible stylistic differences between the works. It is not inconceivable that the scribe of MS. F.174 viewed the two poems in some sort of relation and that their placement in the MS. with Ælfric's Grammar and Glossary may signify an intention by the scribe to preserve English works. However, though they do have linguistic and rhythmical affinities, if there is anything
artful in the positioning of the "Sanctus Beda" fragment before the "Soul's Address," it is almost certainly the art of the compiler of the MS. and not the authors of the works. For editions of the "Sanctus Beda" fragment, see fn. 2 above.

166 Woolf, p. 96, prefers the term quid profuit for passages which focus on the loss of apparently valuable items that have proved worthless in the end.

Also see Woolf, pp. 78-82 and 95, and Rossell Hope Robbins, "Signs of Death in Middle English," MS, 32 (1970), 282-98.

169 Buchholz advances the opinion that "The Grave" is a further fragment of the "Soul's Address," a view examined and rejected by Louise Dudley in "'The Grave'," MP, 11 (1914), 429-42. The alternative view, that the "Soul's Address" derives from "The Grave," seems equally improbable. It is put forward by Dudley and, most recently, by Turville-Petre, pp. 9-10.

171 Lists of correspondences and possible correspondences between the two works can be found in J.D. Bruce, "A Contribution to the Study of 'The Body and the Soul! Poems in English," MLN, 5 (1890), 197-99; Brown, English Lyrics, pp. 189-91; Haningham, "Old English Precursors," p. 293,
fn. 7. A number of the correspondences listed by Heningham seem rather far fetched while others are so short and mundane as to be of no significance. The references here are to Brown's B version of "The Latemest Day," pp. 50-54.

172 Further, in two of these MSS, Bodley 1687 and Trinity College, Cambridge, MS. 323, "Doomsday" is itself preceded by "In a thestri stude." Trinity College MS. 323 also contains the short 'body and soul' fragment "Nou is mon hol and soint," Brown, English Lyrics, p. 31. "Doomsday" can be found in Brown, English Lyrics, pp. 42-46.

173 Buchholz, pp. I-II.

175 Oakden, II, 3-4, lists a number of "parallel" passages from "Soul and Body" and "Soul's Address," but the verbal similarities between the two poems are not particularly striking.

176 On the Signs of Death, see Woolf, pp. 78-82, and Robbins; on the Signs of Decomposition, see Woolf, p. 95.

180 Hall and Ricciardi.

Soul," i.e., "Als y lay in a winters nist."

Zupitza, Julius. "Zu 'Seele und Leib'." *Archiv für das Studium der neueren Sprachen und Literaturen*, 91 (1891), 369-404. An edition of an OE 'body and soul' passage in prose (see Bibliography 5(a)), a comparison of the late Middle English translation of "Noctis sub silentio" to an edition of one of the Latin versions, and a comparison of the Batibuchkof, Napier, and Thorpe homilies (see Bibliography 5(a)) largely superseded by Dudley's "An Early Homily on the 'Body and Soul' Theme" (see Bibliography 5(b)).
THE TEXT

The text is accompanied by two sets of notes: textual at the foot of the page and explanatory following after the text.

MS. spelling is reproduced, except in cases of emendation; q is distinguished from q as it is in the MS.; p is printed w; word division is regularized. The abbreviations l and 8 for and are expanded without notice. The abbreviations f< for hot and ~ (tilde) for a following nasal are expanded with indication in the text. Other abbreviations, including all those in the Latin lines, are expanded in the text and marked in the textual notes. Capitalization and punctuation are the editor's own. MS. capitalization is recorded in the textual notes. Metrical pointing in the MS. is indicated by the line division of the text; any eccentricities in this pointing are marked in the textual notes. Accent marks in the MS. are indicated in the textual notes as are some particularly faded words. Except for the first fragment, f. 63<, the fragments of the work are designated by two letters; the first, unbracketed, letter indicates the alternative order of the fragments presented in this edition; the second, bracketed, letter indicates the order accepted heretofore. At the beginning of Fragment C(G), f. 66<, and Fragment F(D), f. 65<, occur portions of lines that are designated la in order to preserve the established lineation of these fragments. All emendations are indicated in both the text and the textual notes and are discussed in the explanatory notes.
The critical symbols used in the text and the notes are, with some adaptation, those recommended by M.L. West in *Textual Criticism and Editorial Technique* (Stuttgart: B.G. Teubner, 1973), pp. 80-82. They are as follows:

1. ( ) enclose expanded abbreviations as well as ordinary parentheses.

2. < > enclose letters, words, or passages added to the transmitted text by conjecture, including emendations.

3. { } enclose editorial deletions.

4. [ ] enclose probable scribal deletions.

5. † † mark passages judged to be corrupt. If only one word is involved, a single obelus is used.

6. a b c Dots under letters indicate that they are difficult to decipher or, more usually, that only a portion of them remains. When it occurs under a letter enclosed by angle brackets, a dot indicates that, though a portion of the letter remains, its identity has been surmised from the context. A dot under a letter not enclosed by angle brackets indicates that enough remains of the letter in the MS. to allow probable identification.

7. [ ] enclose sections of the text lost due to MS. damage.

Asterisks in square brackets indicate that the amount of text lost cannot be accurately determined; dots, on the other hand, indicate approximately the number of letters that are missing owing to the damage.

EXPLANATORY NOTES

An effort has been made in the explanatory notes to make the text accessible to the reader at a linguistic level; discussions of a more speculative nature have been kept to a minimum, though attempts have been made to illuminate especially murky passages and to guide the reader to secondary sources that should be of use in coming to terms with the work. All the reconstructions proposed by the previous editors for the damaged portions of the MS. that differ from those of the present edition have been included in the notes, regardless of merit; the critical symbols used are those of the present edition, however. The previous editions are as follows:

1. Sir Thomas Phillipps' work (1838) is a fairly accurate diplomatic edition with no attempts at reconstruction of damaged portions of the MS.

2. S.W. Singer (1843) attempts reconstructions on the basis of Phillipps' text, i.e., he did not actually see the MS. himself. His text is laid out in half-lines (rather than full-lines) with a facing translation; it is numbered continuously from the beginning of the first fragment to the end of the work.

3. Ernest Haufe (1880) based his knowledge of the MS. on a collation of it made by Julius Zupitza and Hermann Varnhagen in 1879 while Zupitza was preparing his edition of Altvic's Grammar and Glossary. He also knew the Phillipps and Singer editions, though he
acknowledges the latter only sporadically. Haufe provides a brief introduction touching on matters of language, prosody, and the state of the MS.; he divides the text into fragments lettered A through G; he also provides explanatory notes to which he makes a few additions in an 1881 Anglia article. The Haufe edition was reviewed by Wissmann in 1881.

4. Richard Buchholz's edition (1890) contains the most thorough discussion of the poem's language to date as well as a complete description of the poem's prosody. Like Haufe, Buchholz relied on the Zupitza-Varnhagen collation for his knowledge of the MS., and further, it is only through Haufe's edition that he is aware of Singer's work. Important reviews of the Buchholz edition, which provide essential modifications of the work, were written by Zupitza (1891), Kaluza (1891), and Holthausen (1892). Buchholz, whose work includes an edition of "The Grave," also provides a German prose translation of "Soul's Address."

5. Joseph Hall (1920) apparently saw the MS., but he offers an edition of only Fragments A and D(B).

6. Rolf Kaiser (1958) presents part of Fragment A and all of D(B); however, his work is based entirely on previous editions and therefore, is not mentioned further in the present edition.

7. Gail D.D. Ricciardi's edition (1976), an unpublished dissertation, is a collection that includes the two versions of the Old English "Soul and Body" and "The Grave" as well as the "Soul's Address." She was the first editor of the complete poem since Phillipps to actually study the MS., and, consequently, her work includes a number of superior suggestions in regard to possible reconstructions.
of damaged portions. However, the effectiveness of Ricciardi's edition of the "Soul's Address" (and of "Soul and Body") is under-
mined by the vast scope of her project.

In the explanatory notes the previous editions are referred to by the names of their editors; reviews of these editions are referred to by the names of the reviewers.

For other abbreviations, see the list of Abbreviations, p. viii.
1. *enearde* begins the first line of the remaining portion of f. 63\(^v\): the top of the leaf has been trimmed off. Hall thinks it likely that *enearde* are the last seven letters of *middenearde* since the usual uncompounded form for "earth" in the poem is *eorp*; Ricciardi includes *midd-* in her version of the text.

2. Phillipps and Hall retain the abbreviation ẞ for "and"; Buchholz and Ricciardi expand to ond; Singer and Haufe expand to and. While OE /a/ before nasals becomes /o/, written ɔ, when accented, a prevails in unaccented position, e.g., licame, ll. A9, 11. (See Introduction II i 4 above.) Phillipps prints *iculen* in italics and Singer leaves this word out; all other editors print *sculen*. Haufe's suggestion is that *sculen* is used here as an auxiliary with an elided verb of motion, a view accepted by Buchholz; alternatively, Hall suggests *sculen* is an independent verb with the meaning "to pertain to, to be proper to" and translates the line "and all created things which pertain to it" (see Visser 176). Without the context that would be provided by the lines missing from the top of the leaf, the meaning of *sculen* cannot be precisely determined.

3. Singer reconstructs the damaged portion *wisdomo bonyn*, but cre is clearly visible along with part of a fourth letter that Haufe says could be an ʃ, ˡ, or ʂ. He reconstructs *creftte bonyn*; Buchholz accepts *crefte* but changes the adverb to the demonstrative pronoun *hene*; Hall and Ricciardi accept Buchholz's reconstruction,
though the former believes bonne to be a plausible alternative, which it is.

4. him on ileide: In poetry, prepositions sometimes follow the personal pronouns they govern, particularly if this allows them to stand before a finite verb (Mossé 169.1). Hall is of the opinion that ileide on has a meaning "apparently without a parallel" in this line: "put into" or perhaps "entrusted to"; however, as Ricciardi points out, "to lay on" meaning "to bestow," OED lay, 55, is acceptable in this context; cf. MED leien, 12a, "to put in place, set."

5. ison<ne>: Singer reconstructs isom<ne> but the preterite must have a -d- in the suffix; Haufe prints isom<ne> and is followed by all subsequent editors. Ricciardi believes part of the final -e of this word is visible, but the mark on the MS. is probably the point dividing the verses.

6. is expanded to bet, the form that consistently appears when the word is unabbreviated.

7. The line has only three stresses. Singer reconstructs the text <woan>eb without comment; Haufe prints <wone>eb noting that a stress is missing from the on-verse. Buchholz prints greoneb and woneb by analogy with 11. A15 and 25; Hall points out that this reconstruction is too long for the gap in the MS. and he returns to Singer's suggestion while noting that weopeb and woneb might have been the original construction; Ricciardi reconstructs weopeb by analogy with 1. A10, another possibility. As there is no point in the MS. before and <woneb>, it may be suspected, at least, that the
scribe copied the defective line from his exemplar and did not make the error himself. Regarding the two conjectures that have been made about the original line, one can note that in this poem lines with the alliterative pattern xa : ya are roughly twice as common as lines with the pattern aa : ax. It might be allowed, therefore, that Buchholz’s suggestion is the more probable of the two. Regarding manet, see Introduction II i 35.

9. of: Singer reconstructs the text <hier li>came; Haufe and Buchholz, <and li>cme; Hall, <from li>came; Ricciardi, <vib li>came. Hall argues that idalen here is transitive so that a preposition is probably required; and, which occurs in the apparently similar l. A26, would be unusual in this position, and furthermore, todaleb in that line is intransitive. Hall provides one example for the use of fro in this situation, OEH ii, 61/31, but the form does not occur elsewhere in the poem; from/from is consistently used but would probably be too long for the space missing from the MS. Hall also provides an example for the use of vib from ASH, 167/17, "wib bone lichaman seo whale, 3edelan"; vib governing the accusative usually means "against," however. This is not an impossible reconstruction here, but with its clear sense of separation seems preferable and is found in l. D(B)33 following delen.

10. hit, i.e., the bear of 1. 6.

11. <for drap>: Singer reconstructs the text <poeie Drapp; Hall and Buchholz have simply <Dráp; Hall has <pan Dráp; Ricciardi.
<for drap>: Singer’s reconstruction is probably too long while
that of Haufe and Buchholz is almost certainly too short. swo or for seem equally possible. There is no MS. justification for the capitalization of deap: only a very small portion of the d remains.

12. <oftesipes>: Singer reconstructs the text <his sip>es, but, as Ricciardi points out, this would be the only occurrence in the poem of sip in the plural. Haufe reconstructs <oftesipes> and is followed by both Buchholz and Hall though the former, in a list of corrections to his edition, reveals a later preference for weasipes by analogy with 1. C(G)7. However, wonien is intransitive in this poem, as a rule, and further, weasipes would create a line with the alliterative pattern aa : aa, a much less common type than aa ax. Ricciardi prefers the usual OE spelling, oftsipes for reasons of length, but if fleep can be accepted in 1. 37, as it is by all editors including Ricciardi, the common ME spelling, oftsipes, cannot be considered excessively long. He, i.e., the 'licame of 1. 11.

16. al<so bip>: Singer's reconstruction, <reowliche>, is very long, but <is>, printed by Haufe and Buchholz, and even <bip>, preferred by Hall and Ricciardi seem rather short. Perhaps préférable is and al<so bip> his sip, i.e., "and thus is his death . . ."

17-21 One verse is missing from this passage. Singer apparently did not notice the omission; he reconstructs 21a him-colde his <heortë> and changes the spelling of liggeb to leggeb. Haufe and Buchholz believe the missing verse is in 1. 21, and for 1. 20 they print him teoreb his mynt him coldeb his <mub>. Hall, following an analogous passage in FRL, 253/3-6, reconstructs
11. 19-21:

him scortēp <de> tunge - <him starkep> his skin
him trukep his iwīt  him teorep his miht
him coldep his <siden>  liggep be ban stille.

Hall admits the alliteration of siden/stille is imperfect but
claims that a more general term than heorte or męp is wanted here.
Robbins, p. 291, and Woolf, p. 80, both suggest fet. Ricciardi
locates the missing verse in l. 20 and replaces Hall's siden with
the stronger līpe "limbs" by analogy with l. G(E)11; liche "body"
renders 21a similar to a number of OE verses: e.g., līc acolod biċ,
"Soul and Body I" 123a and līc colōde, "Guthlac" 1307b as well as
hraw colian, "Rune Poem", 92a, hraw colode, "Dream of the Rood"
72b, etc. In this passage, the various parts of the body may be
construed as the causative objects of impersonal verbs (Visser 31),
but, since the -ep ending marks the pl. form of the verb as well
as the 3rd sg., aren, egen, and lippen may, in fact, be subjects:
"His ears become deaf, his eyes become dim, etc." On the Signs
of Death in ME literature see Woolf, pp. 78-82, 95, 102, 330-2,
341, 373, 375, and Robbins, pp. 282-98.

23. <at> Singer and Haufe have <of>. The two prepositions are often
interchanged (Mustanojá, pp. 350-1); however, bereven is followed
by at at ll. E(C)7-8 (by emendation).

24. <bod>unge: Singer has <pin>unge. Little of the d remains, but

26. <bux>dtid: Singer has <hear>dtid which gives no alliteration and is
otherwise unattested.
27-28. Haufe prints *So biep eft be feorpsib sorhliche to da<len> mid seoruwen al bewunden* as a single line, which it clearly is not; Buchholz prints *mid seoruwen al bewunden* as a separate half line making his lineation one number greater than the other editions from this point to the end of the fragment; Hall omits *sorhliche todælen* as does Ricciardi. It would appear that at some point in the MS. history of the poem 28b, *soriliche todæleb*, was miscopied into a position between 27a and b. Regarding *feorpsib*, see Introduction II i 5.

29. Cf. 11. B(F)19, C(G)6, E(C)15, 37, F(D)9, 16, 42.

30. *feiæ:* Singer reconstructs the word *bodigæ* which Haufe accepts despite the lack of alliteration. Haufe rejects his own suggestion, *feiæge*, and Buchholz also rejects *bodigæ* which does not agree with the masculine pronouns of the following lines. He offers no alternative suggestion, however. Zupitza, p. 79, and Holthausen both suggest *feiæge* and this has been adopted by both Hall and Ricciardi.

*iflut:* pret. part. of *flitten* "to move, convey (something)" from ON *flytja*. The movement of the body to a position on the floor just prior to death was an Anglo-Saxon custom that continued into Norman times (Rock, II, 246).

31. In the church the body was laid with its feet toward the high altar, i.e., the east; it lay in the same direction in the grave (Rock, II, 380).

32. *cölædeþ:* Singer and Haufe reconstruct this word *heareyœdeþ*; Buchholz rejects this suggestion but offers no alternative;
Zupitza, p. 79, and Holthausen both suggest *colde*; and both Hall and Ricciardi have accepted this suggestion. Cf. l. A36.

Cf. "The Grave," l. 6, "Nu me sceal be meten and ba molde seoxa." The priest marks the length and breadth of the grave with the sign of the cross, using a spade (Rock, II, 383-4). *瑟德* would appear to mean "staff" here.

Haufe suggests that a relative pronoun is missing after *fleoph*; however, *beo* may be a relative and the subject of *fleoph* may be unexpressed.

**be<ne> deade**: Singer has *be <d>ede*; Haufe, *be <d>ede*. Neither suggestion is long enough for the gap in the MS. and the masc. acc. sg. definite article is regularly *bene* in this poem, not *be*. Buchholz prints *be<ne d>ede* and is followed in this by Hall and Ricciardi.

In OE, *earfopsib* occurs only in verse.

Phillipps prints *eigen* and is followed by Singer. All other editors have *e3en* which is the MS. reading.

**<ponne>**: Singer, following Phillipps, prints *ie* in italics. Haufe reconstructs *<ponne>* as do all subsequent editors except Buchholz, who prints *<Ee>* , a word that is both too short for the space available and paleographically unjustified. The similarity of this line to l. A41 has prompted all editors since Singer to suggest that *riche* is a mistake for *wrecche*, though no one emends. It is unclear, however, how the repetition of *wrecche* would strengthen the passage or why it is required or likely. Perhaps the poet was trying to achieve an antithetical balance between the
verses: *riche* meaning "great, powerful"; *wrecche* meaning "weak, insignificant." Hall is also of the opinion that A41b is A43b misplaced through scribal error and that A41b should actually be something like *be wonep be feorpsib*. While this is not inconceivable, it also must be remembered that repetition of verses, even within a small number of lines, is a characteristic of the style of this poem; cf. A5b and A8b.

44. *<bo>yne*: Phillipps has *ine* in italics; Singer and Ricciardi have *<boynne>; Haufe and Buchholz,* *<In>ne; Hall,* *<abarinne).* *Inne* and *barinne* are both possible reconstructions, though the former is probably too short; *bonne*, as Ricciardi points out, is more in keeping with the style of the poem, i.e., it is a word used very often. Despite its ending, *cumap* is, in all probability, singular: if *unblisse* were plural it would end in *-s* or *-n.*

45. Singer translates *besiib* as "saith" while Buchholz translates it as "seufzt," i.e., "sighs." Neither rendering is phonologically justified: according to Zupitza, p. 79, the development of the *c* in OE *besican* into *h* would be unparalleled; the development of *a* in 3rd sg. *sazib* into *i* is also unlikely. Zupitza believes that *besiib* is, in fact, derived from OE *besen,* and the MED confirms that it is a common early form of *bisen,* 2b, "to give heed, pay attention."

Fragment B(F), f. 66°

1. *me suke to be* begins the first line of the remaining portion of f. 66°: the top of the leaf has been cut away.
2. "I opened my mouth and drew in the spirit." *sp(iritu)m*: MS. is either ipm or spm with the ascender of the long s cut away. All editors since Phillipps have printed ipsum, though this does not give good sense. Kaluza, p. 16, notes, however, that the Vulgate reads spiritum at this point and suggests that the abbreviation of this word was confused with that of ipsum by the scribe. In fact, the damage to the MS. here makes it impossible to tell whether the first letter of the word in question is an i or a long s, and, since spiritum is the desired reading and ipsum makes little sense, it seems preferable to accept the former as the MS. reading. Any abbreviation marks that may have been above the letters have been lost in the trimming of the leaf. Cf. Ps. 118 (119), 131: "Os meum aperui, et attraxi spiritum."

3. Because the top of the leaf was not trimmed off evenly, the remains of the letters of the first line on f. 66r become progressively smaller. In the on-verse pu can still be made out, but the following words cannot. Neither Singer nor Haufe attempts to fill this gap; Buchholz, following the Latin of the previous line, reconstructs opnedest bin bon for the damaged portion of the verse. Zupitza, p. 82, Kaluza, p. 16, and Holthausen all point out that os in this case is to be translated "mouth," not "bone." Ripciardi prints pu ... dest bin mup, claiming correctly that opnedest is paleographically unjustified: the word following pu contains no letter with a descender; therefore p is an impossibility. In the OE psalters aperui is usually translated with a form of ontynan, "to open, reveal, display," but this word—even with y written
as y--does not seem to fit the remains of the letters either. Phillipps prints et for and, MS. Æ.

5. nold<est pu>: Haufe does not include pu in his reconstruction. The MS. seems to read noln with a superscript d over the second n. MED bimmen, 1b, means "to complain about one's troubles," or in this case, "needs"--not necessarily "sins" as Buchholz suggests; certainly not "pleasures" as Ricciardi suggests.

6. wold<est ham>: Haufe does not include ham in his reconstruction.

8. <sunfu>le: The reconstruction of Singer and Haufe, <al>le, seems rather short. Buchholz and Ricciardi read sunfule, cf. l. B(F)27. Per, i.e., "where."

9. milts<o> onfob: Singer's reconstruction is milts<unge> fob. It is likely, given the presence of onfob in l. B(F)12, that onfob is correct here, and miltsunge onfob would be too long for the gap in the MS.

10. In this line, burh governs the accusative case; in l. 12, the dative case.

11. hor<e soule> : Singer's reconstruction is hor <soules>. soules is not inconceivable; the OED, soul, 1b, records an example of a plural in -s c. 1200; the form hor does not occur elsewhere in the work.

13. be<arf ic>: Singer has be <scalt>; Haufe, be <pearf>; Buchholz and Ricciardi, be<arf ic>. It is probable that the soul is the subject of this clause; Haufe believes it is an impersonal construction.

15. milts<unge>: Singer reconstructs miltsunge; all subsequent
editors print milts(e), probably by analogy with l. B(F)9. However, 
miltse would leave a rather large space in the MS., certainly 

enough space for a point and the first word on the next MS. line, 

nu. Singer’s miltsunge plus a point would likely have filled up 
the space in the MS. right to the edge of the leaf. It must, 

therefore, be given consideration.

17. forbunden: Phillipps has forl.../den, and Singer reconstructs 

forligden "covered up." Haufe, Buchholz, and Ricciardi have 

forbunden "bound." Either reconstruction is acceptable in terms of 

meaning. Paleographically it seems more probable that the vertical 
stroke after the r is a partially visible l, not the back of a b. 

Further, forleiden from OE forlecgan would provide the line with 
an alliterative pattern of xa : ay, a very common one in the poem, 

while forbunden would leave the line without alliteration. However, 
it is very unlikely that the pret. part. of an OE weak verb would 
end in -en in this poem (see Introduction II iii 32); therefore, 

forbunden has been accepted here.

18. Ricciardi prints efre ma as a compound.

19. pin wrecche lif: Phillipps mistakenly prints pine and is followed 
in this error by Singer. Singer and Buchholz reconstruct reouliche 

pin(p); Haufe and Ricciardi, reoulic <pin>. As Ricciardi points 
out, the space between the c of reoulic and the remains of the 
letter which followed it is closer in length to a space separating 
two words than two letters of the same word. reoulciche is the usual 
form in this poem, but -lic does occur in sellic, l. C(G)27.
20-21. alle (heo): Singer has alle (heo); Haufe and Ricciardi, alle b(co); Buchholz, alle (sunnen). The remains of the letter after alle are probably those of an h, though b is not an impossibility; s, however, is very unlikely so that Buchholz's reconstruction can be dismissed. The referent of the plural heo clearly should be sunne, I. 20, which is singular, and both the plural verb in 21a and the comparison to the plural piles in 21b reinforce Ricciardi's decision to emend sunne to sunnen, a change that has been adopted in this edition as well. It is possible that a tilde representing the final n was lost in transmission. piles: Phillipps prints wiles and is followed by Singer.

22. piles: Phillipps prints wiles and is followed by Singer.

he(o hine): Singer has he(om), but cf. I. B(F) 24.

24. piles: Phillipps prints wil...; Singer has wil(es)

25. Ricciardi's view is that the unusual word order and lack of alliteration indicate that this line is corrupt. If fromward is construed as an adverb, its position is defensible; however, if, as is more likely, it is a preposition with him as its object, its position is unusual. Lack of alliteration does not necessarily imply corruption in this poem. Ricciardi also points out that the i of iwend is probably a later addition to the MS. as it is squeezed in between the w and the m of him and written in a different ink than the words around it. The letter is squeezed in, but variations in ink colour occur throughout the MS., often on the same leaf.

26. we(red): Singer has we(red). wibine: Phillipps prints wib inne
as does Singer; Haufe and Buchholz both have \textit{wipin(n)ne}; Ricciardi prints \textit{wipine}. Double \textit{n} is the usual spelling in OE forms of the word and it is possible that a tilde over the second \textit{i} has been lost in transmission. Forms with a single \textit{n} do occur in ME, however. This compound could be two separate words. See OED, within. Cf. l. F(D)48, basically the same line with the form \textit{wipinne}.

27. \textit{ful sore}: Phillipps prints \textit{fulsore} as does Singer. This is an accurate rendering of the MS., but it is very unlikely the two words form a compound. Haufe, Buchholz, and Ricciardi print two separate words.

28. \textit{al bet}: Singer has \textit{bu al bet}; Haufe has \textit{bet}: Buchholz and Ricciardi have \textit{al bet}. Cf. ll. B(F)23, 25. The pointing in the MS. indicates that was in this line is in the on-verse, and in the on-verse is where it is placed by both Singer and Ricciardi. (Neither Haufe nor Buchholz shows half-line divisions in his text.) Ricciardi notes, however, that the point after \textit{was} is probably misplaced since it creates syntactical confusion by separating the auxiliary from the participle and disrupts the balance between B(F)28a and B(F)29a. In OE poetry, the auxiliary \textit{was}, in the final position of a verse is almost invariably preceded by the participle. On the few occasions when the participle follows in the next verse, it is separated from the auxiliary by a direct, or indirect object, e.g., "Andreas" l. 1307, \textit{ond se halga was to hofe laded}, "Guthlac" l. 1317, \textit{Swa se burgstede was Blissum gefylle}. 
toward(for): Singer reconstructs toward(des); Haufe, Buchholz, and Ricciardi have toward. If the correct reconstruction is toward, however, sufficient space would have been left after the point to write the next word, "The", without beginning a new MS. line. Singer's reconstruction is possibly correct, though one might have expected fromwards in l. B(F)25. Alternatively, a short word, such as for or bus, may have been wholly lost when the leaf was trimmed. Cf. l. B(F)23.

ipined full}sore: Singer has pipined ful}sore; Haufe, pipined>sore; Buchholz and Ricciardi, pipined ful}sore. Haufe's completion is almost certainly too short. Cf. ll. B(F)27, 33.

pinien: Phillipps has pinion as does Singer. socre all>: Singer and Haufe have only socre> which is very short; Buchholz and Ricciardi have socre all>. al is the usual spelling in the poem; all occurs twice, ll. C(G)6 and 13. Buchholz uses the -ll form because the word is in stressed position. synne is the only form in the poem in which y occurs.

heihnesse: Singer has heihnes, though Phillipps prints the MS. reading.

seequebe: Singer, has secofobe>; Haufe seeovebe>; Buchholz and Ricciardi seeube. Singer's is the most archaic form and also a possibility.

Haufe has only a comma after worde.

In the MS. there is a point after each item listed in these lines.

wa<e and>: Singer has wa<ere>; Haufe, Buchholz, and Ricciardi have wa<er>, which seems a little short; a variant in -rr is not
probable as doubled consonants occur finally only three times in the work, all, 11. C(G)6 and 13, and iwill, l. C(G)3.

40. fore seide: Phillipps, Singer, and Haufe print one word, foreseide. However, OE forsecegan, as Ricciardi points out, means "to accuse, slander." Buchholz and Ricciardi print two words, fore seide, i.e., "said before."

41. makunge: Singer has makede; Haufe, Buchholz, and Ricciardi have makunge. Ricciardi believes the MS. may say ma and she also thinks makunge is too long a reconstruction. The addition of -unge to what appears to be ma would take the writing on this MS. line to the edge of the leaf, but it is not too long for the space available. almhties: one might expect a weak form of the adjective following the definite article, but, even in early ME, strong and weak forms were often confused (Mustanoja, pp. 276-7). See Introduction II iv 1. Ricciardi capitalizes fader.

44. "Let there be, and all things were"; cf. Gen. 1, 3. Fiat lux. Et facta est lux.

47. The MS. reads [....]/bene sune. Phillipps, however, prints bene sune causing Singer to reconstruct the passage <onne> bene sune and translate the verse "he made then the sun." All editors since Singer have expanded < to burh. Haufe and Buchholz print burh) hity bene sune, and Buchholz translates the verse Er schuf durch desselbe den Sohn...: sune is an improbable spelling for "sun"; it would seem to mean "son." Zupitza, p. 82, and Holthausen strenuously object to this reading on theological grounds, i.e., that the Son was created by the word of the Father.
would never have been written. They recommend the elimination of hit, arguing that nothing is missing from the MS. at this point. And, in fact, if the reconstructions in ll. B(F)45 and 50 are correct, at least nine millimetres of space were available after p, sufficient for a short word such as hit, though perhaps not sufficient for bene, the next word in the text that still remains. Ricciardi prints p(urrh)... bene Sune but suggests that sune may, in fact, refer to the sun, as Singer suggests, and the reconstruction hit to the "word" of the previous line. Given the tendency toward repetition in the poem and given the subject under discussion, the creation, this latter view must be considered; possibly a tilde representing the second n of sünne has been lost in transmission. However, bene is unambiguously masc. in the "Soul's Address" while in OE sünne is fem. Unless gender distinction has broken down here (which is not probable) or MS. corruption has caused the scribe to alter the form of the article, the view of Zupitza and Holthausen seems preferable.

49. [....]imaginem: Phillipps and Singer have imaginem; Haufe and Buchholz have <ad imaginem; Ricciardi has <... imaginem. Ricciardi thinks it possible that the remains of the letter following wise, l. B(F)48, is an f, perhaps the first letter in an abbreviation of faciamus. Cf. Gen I 26-7, faciamus hominem ad imaginem et similitudinem nostram: "we made man in our image and likeness."

50. Ricciardi capitalizes drichtenes. This word is very faded in the MS, but it does not have a capital.
Most has been lost of the first few letters of the first line that remains on f. 66v, and at least part of any ascender in the other letters of the line is missing as well. Preceding ic, l. 1, are three letters, the first of which is almost certainly a g, followed by what appears to be ã (and). The remains of perhaps two letters before the g offer no clue to their original form. Phillipps prints (of God). ã ic; Haufe prints <god> as part of his first line, i.e., l. 1; Buchholz notes the possibility of this word being present but does not include it in his text; Ricciardi prints God and calls that word l. 1, thereby causing all her numbers in this fragment to be one greater than all the other editions. It is possible that Phillipps could make out of when he examined the MS., and that further damage has obliterated it; god is a very feasible reconstruction of what remains in the MS.

All editors, with the exception of Ricciardi, follow Phillipps and print and ic þe imane as C(G)2a. Buchholz translates imane as "Genosse," i.e., "comrade," though "slave" might be a better translation. The first meaning given for menẽ (l) in the MED, however, is "sexual intercourse," which would go well with the phrase in the off-verse, "with loathsome love." Zupitza, p. 82, notes that the word could also be an adjective, i.e., "false, wicked," or an adverb. Damage to the MS. here makes precision impossible. Ricciardi prints ñ e imane ñe mid lobre lufe. She thinks it unlikely that imane is the correct reconstruction, but admits that it is paleographically possible. If imane is
accepted, the line has neither strong alliteration nor rhyme.
Ricciardi suggests, with reservation, _lu_este, a reconstruction that
would provide the line with alliteration, though not much sense.

2. \texttt{<pu wol>est}: Singer has \texttt{<pu nol>est}.

4. \texttt{mape<me>te}: Singer has \texttt{mape<me>te}; all other editors, mapemete.
Ricciardi quite correctly questions the shortness of this completion.
It does not seem at all sufficient.

5. \texttt{<to hell>e}: Singer's reconstruction is \texttt{<in hell>e}; Haufe and
Buchholz print \texttt{<inne hell>e} by analogy with 1. B(F)32. Ricciardi
rejects \texttt{inne} because of its length and prints \texttt{to} instead, suggesting
that an alliterating verb such as \texttt{sechen} might be lost. However,
in eME \texttt{in} as well as \texttt{to} can be used with a verb of motion
(Mustanoja, pp. 388-9), in this case an elliptical verb of motion
with "shall." Singer's completion, therefore, is also acceptable.

6. \texttt{ber} is likely an adverb, i.e., "there," not a demonstrative pro-
noun. \texttt{lif} would appear to be an uninflected dative form; see
Introduction II iii 4.

7. \texttt{atwic<ten mi>pe}: Singer reconstructs \texttt{atwi<ne} and \texttt{pin>e}; Haufe
and Buchholz, \texttt{atwic<ten be}>; Ricciardi, \texttt{atwiten mine}. Ricciardi's
concern with the shortness of \texttt{atwiten be} is well founded, and her
own reconstruction seems preferable. \texttt{weasip} "woetime" or "journey,"
is probably related, at least in connotation, to OE \texttt{weasip}
"companion in woe" often used for the inhabitants of hell.

9. \texttt{atru<ke}p: Singer has \texttt{atru <pin>}; Haufe, \texttt{atru<ke}d \texttt{pi}.
Buchholz, in his text, prints \texttt{atru<ke}d \texttt{pin}, but he changes this to
\texttt{atruked \texttt{pin}} in his list of corrections. Ricciardi has \texttt{atruked \texttt{pin}}.
10. icwemede: the subject of MS. icweme is almost certainly tunga.

1. 9, and the sense of the passage requires a pret. ind. form, i.e., icwemede; cf. the identical C(G)21b and the similar C(G)23b where the tongue is also the subject. All previous editors print icweme. Haufe has no punctuation after this line; however, the subject changes from the 3rd to the 2nd sg., i.e., from the tongue to the body.

12. obre: Singer emends to bu obre; however, "non-expression of the pronoun may occur when it has been expressed in a previous oblique case" (Mustanoja, p. 141, no. 4). The addition of bu is unnecessary, therefore. Cf. 1. G(E)20.

13. <gersume>: Phillipps prints ..ime, and Singer attempts no reconstruction. Haufe supplies gersume and this is accepted by both Buchholz and Ricciardi. to may be an adverb meaning "too, also" (this is Haufe's opinion), but it could also be construed as a preposition used in a final sense (Mustanoja, p. 410), i.e., C(G)13a may be translated either "you gathered also treasure" or "you gathered (them) as treasure." Zupitza, p. 82, believes the off-verse of this line is parenthetical, and Ricciardi treats it as such. However, perhaps what is implied is that the gersume was not only gathered by means of the deofles lore, but also lost by means of it as well: C(G)13b need not be parenthetical.

15. <tung>: Singer has <bodig> which agrees neither with the fem.
pronouns nor with the context of the following lines. The line
neither rhymes nor alliterates with either reconstruction, however.

16. Singer, following Phillipps, prints be mo as a compound. Singer's
reconstruction of the damaged passage is <for>, l. 17. Haufe has
of, l. 16, which Buchholz changes to so, a reconstruction that gives
the line rhyme and is analogous to l. C(G)25. Ricciardi follows
Buchholz. All these reconstructions seem too short, however; a
combination of Singer's and Buchholz's suggestions seems preferable.

18. <weren>: Singer has <was>, but cf. l. C(G)50.

19. bi hire: Singer, following Phillipps, prints these words as a
compound.

20. "Your tongue framed deceit." <dolos>: Ricciardi reconstructs
<dolum>. In the Vespasian Psalter, Ps. 49(50), 19 reads concinnavit
dolum; in the Salisbury Psalter it reads concinnabit dolos.

21. geoodede: MS geoodede. Phillipps prints geoodede and Singer simpli-
fies this to geobode, which he translates "poured." Haufe,
Buchholz, and Ricciardi all adopt Stratmann's emendation to
geoodede "sang, recited" from OE gieddian; in the BT entry for
giddian, the form geoodede does occur. Ricciardi believes the MS.
form actually signifies geoodede; d with a loop to the right-hand
side of its ascender is a scribal abbreviation for de, but it does
not occur elsewhere in the work. She thinks it possible that the
scribe was confused by a word unusual in a homiletic context. In
the OE psalters, concinnabit/concinnavit is translated either by
singan or hleórian; it would appear that the word was taken to be
a form of concinere, "to sing in a chorus, harmonize," rather than
of concinnare "to put or fit together carefully."

22. <huned>e. Singer reconstructs <iowem>de, a form which does not make sense here. Haufe, in his edition, offers no reconstruction here, but later, in his Anglia article, he suggests <chid>de, a reconstruction adopted by Buchholz. Ricciardi suggests hunede; cf. l. F(D)47. Either chidde or hunede would be acceptable (both can mean "abused, insulted"), but we might expect the dative case after chidden (Mustanoja, p. 101), and hunede provides the line with alliteration. Regarding heou, see MED heuen (1), 1f, "to be cutting."

24. sun<nen so>: Singer has sun<ne bat>; Haufe, sun<ne be>; Buchholz, sun<nen so>; Ricciardi, sun<ne so>. The number of sunne(n) is unclear. Pen invariably denotes masc. dat. sg. nouns in this poem, while alle is invariably plural. The reconstructions of both Haufe and Ricciardi are probably too short for the gap in the MS., but Singer's is comparable to Buchholz's in length. Buchholz argues that pen is derived from masc. dat. pl. pän, but this word occurs in an unweakened form in l. E(C)25. For the plural form of sunne in -n, see l. B(F)11. The problem here can be solved by emending pen to bin which occurs as a plural form in l. E(C)43.

26. hauef: Singer and Haufe, in his edition, emend to hauef. In his Anglia article, however, Haufe reverts to the MS. reading which is also accepted by both Buchholz and Ricciardi. (See Introduction II i 35.) Phillipps prints ...ned, and Singer, following him, reconstructs <dom>ned. The partially visible letter in the MS. would appear to be an n, however. Haufe and Buchholz
print <de>med, which is too short; Ricciardi expands this to <so>
deymed. But yields a slightly longer completion. Also, pret.
part. in this work usually take the verbal prefix i- if another
prefix is not already present.

27. non sellic: The second n of non is very indistinct now and was
apparently unclear when Zupitza and Varnhagen made the collation
of the MS. on which Haufe depended. He prints now claiming that
non, printed by Phillipps and accepted by Singer, makes no sense
in the context. Wissmann, p. 92, rejects now on the grounds that
it is a late 13th century form, i.e., too late for this MS.
Buchholz prints non but translates the verse "Nicht ist es
seltzen," apparently believing the substantive described by the
adjective sellic to be missing. However, Zupitza, p. 82, points
out that OE sello could be used as a substantive in ME. See also
Mustanoja, pp. 646-7.

28. <soriliche>: Singer's reconstruction is <ponne>. Haufe prints
werche; Buchholz, wrecche soule; Ricciardi, <pin soule.
Cf. 1. D(B)36. Part of a letter is still visible before the e
that precedes p(ett). While it might be an h or a d, this letter
does not appear to be an h or an l. Haufe's reconstruction is
paleographically possible, therefore; the reconstructions of Singer,
Ricciardi, and Buchholz are less likely. (Buchholz's is almost
certainly too long.) The adverb soriliche, which occurs elsewhere
in the poem, fits both the context and the space available while
providing the line with alliteration.

29. leowe: Phillipps prints leone.
30. *ic topferde: Singer's reconstruction is *ic fordferde; Haufe and Buchholz shorten this to *ic foryste. The remains of the letter before f, however, are definitely not those of an r; they would appear, as Ricciardi points out, to belong to an o. Her reconstruction that is adopted here is *ic tyferde.

31. MED fost*er, I b, gives the meaning "care, keeping, protection," but quite possibly the meaning of the word here is closer to "bringing up, fostering" given in BT Supp. *foster, 3.

32. *nouht unplebe: Phillipps prints *ulebe, but Singer reconstructs *me sell*ephe which is paleographically impossible. Haufe prints *noht unplebe and Buchholz expands noht to nouht by analogy with l. D(B)33. Buchholz's reconstruction is accepted by Ricciardi.

The two somewhat indistinct vertical strokes that precede the l are rather close together. They could very well form an n, though they could also be a u, the form Phillipps prints. At less well preserved places in the MS.--and less carefully written places as well--these two letters are hard to distinguish from one another. unplebe, if that is the correct form, would appear to be from OE unlaede "misery, suffering."

34-46.

In this passage, baptism is seen as a wedding of the soul and body. The fontstopen in l. 37 is obviously the baptismal font; ll. 39b-40 refer to chrismation, the anointing of the initiate with chrism, i.e., mid ben holie ele; the kinemerke of l. 41 is probably a reference to the post-baptismal consignation of the initiate with the cross, i.e., the seal of the cross; the godfaderes of l. 44 are those who sponsor the initiate. G.W.H. Lampe in The Seal of the
Spirit (London: Longmans, Green, 1951) gives no indication that such a view of baptism was ever held.

34. *so so*: Singer has *so so* by analogy with 1. C(G)55. The other editors have *pe peo*, which is acceptable and perhaps preferable from the point of view of length.

35. "Your wife will be like a fruitful vine"; Ps. 127(128), 3.

36. *so winbowe*: Singer offers no reconstruction at this point. Haufe has *bonne*; Buchholz, *sin wedde*; Ricciardi, *con wedde*. Buchholz argues that the neuter *wed* is required as an antecedent for *het* in the next line since *het* cannot agree with the masculine *fontston*. However, neither *se* nor *seo*, the OE masculine and feminine forms, is found in this text; and, elsewhere, *het* is used as a relative pronoun with a masculine antecedent in an oblique case, e.g., 11. A5-6 and 1. D(B)21. Even in OE the neuter *het* occurs as the relative pronoun for masculine and feminine forms (M. Stanoja, pp. 188-9).

The previous suggestions would leave the Latin *vitis* untranslated, and, given the poet's treatment of the other Latin passages in the poem, this omission would be unusual. In the OE psalters, *vitis* is translated by either *wintreow* or *wingeard*; in the OE Gospels, *vitis* in John 15, 5 is translated *wintreow* while in the ME "Genesis and Exodus," the accusative *vitem* in Gen. 40, 9 is translated *win-tre*. It is unlikely that either *wintreow* or *wingeard* can fit here as the word required must end in -e and is probably nominative in case: *win-tre* is a later 13th-century form. However, the synonymous *winbowe* from OE *winboh* would fit. So is
probably preferable to also given the length of wipbowe. For ME use of so in this sense, see Mustanoja, p. 336. The line could be translated: "I was to you wedded as a worthy vine."

38. ful<luht> forlören: Ricciardi prints ful<luht> f>orlören, but part of the f is still visible.

41. One verse is missing at this point, or, at least, the equivalent of one verse. There appears to be a point after hauest, and, for this reason, Ricciardi suggests the words omitted lay between hauest and kinemerke. Singer, following Phillipps, prints kinemerke as two words.

42. heih<est>: Singer attempts no reconstruction here; Haufe and Buchholz have heih<mod> which like heihest, seems rather short. Ricciardi's suggestion, <hefde>, is possible; arerde might be preferable by analogy with 1. G(E)12 where the context is similar. Both these suggestions would give the off-verse three stresses, however.

44. behet<en>: Haufe's reconstruction, <tauht>en, is rejected by Wissmann, p. 92, as unlikely, but Wissmann's own suggestion, loveden with a meaning of "promised," cannot be justified either. Singer has <ihat>en (Zupitza, p. 79, believes this is a misprint for iheten); Buchholz and Ricciardi have beheten, though the former acknowledges that iheten would be equally suitable. Buchholz did not have access to Singer's edition, of course, and if Haufe neglects to note Singer's reading of a particular passage--as he does in this case--Buchholz makes no mention of it.

46. mid r>ihtere: Phillipps prints ..ihtere; however, Singer
reconstructs *drightene*. The other editors follow Haufe’s suggestion and print *mid rihtere*.

47-48. *cwi<de/his>*: Singer reconstructs *cwise/his*; Haufe, Buchholz, and Ricciardi have *cwide/his*. Ricciardi points out that this is a very early occurrence of the pl. form, *modes*. MED mod. 1a, records one 12th-century occurrence.

49. *for[....]inne*: Singer has *for<winne*, Haufe and Buchholz have *for<luynne*. The MS. appears to have *inne*, perhaps with an acute accent over the *i*, which would render *forluynne* paleographically impossible since such accents occur only over *i*. Also, as Ricciardi points out, both reconstructions are far too short for the gap in the MS.

51-52. *sis for>oren*: Singer has *<for>oren*. It does seem likely that the repetition of the off-verses in these two lines is an example of dittography, as Ricciardi believes. However, one cannot be certain, because the passage does not fall apart semantically and repetition is one of the essential features of the poem’s style.

53. *scolide>st*: Singer has *<haue>st* but the following line makes it seem certain that *scoldest* is correct.

54. *bring<en ham*>: Haufe and Buchholz have *bringen heom*, which Ricciardi rejects on the basis of length. *Ham* is the usual accusative plural form in the poem; *heom* occurs exclusively as a dative plural.

56. *novella oliuarum*: Haufe and Buchholz misspell *oliuarum* as *oliarum* (Zupitza, p. 83). The *Vespasian Psalter* has *novella*, not *novelle*, so that *a* and not *e* may be the correct reading. In the lower right-
hand corner of f. 66r, the words are very blurred and indistinct.
Ps. 127(128), 3: "Your children will be like olive shoots." Cf.  
Hrabanus Maurus, P.L, vol. 112, col. 927: "Per filios, bona opera,  
ut in Paulo: 'Salvabitur mulier per filiorum generationem' (1 Tim  
2, 15) id est, anima fidelis per bonorum operum multitudinem; item  
juxta illud: 'Et videas filios tuos' (Ps. 127(128), 6), id est,  
praemia bonorum operum." (By children we should understand good  
works, as in Paul: "A woman will be saved by bearing children," i.e.,  
the faithful soul by many good works; likewise: "And may you see  
your children," i.e., the rewards of these good works.)  

Fragment D(B), f. 64r

1. The first line of f. 64r is almost wholly cut away. On the left-
hand side of the leaf only descenders remain; on the right-hand side  
bottoms of letters can be made out as well. The second MS. line  
begins with bu me. By analogy with 1. D(B)17, Singer, Haufe, and  
Buchholz offer the reconstruction <Hwui noldest bepbenchen> bu me  
for the on-verse of the first line, but this is paleographically  
unjustified. Haufe proposed b bu ligge woa w in his note.  
Ricciardi's reconstruction of the damaged first line; ...<ob bu  
wa ligge ... woa wrw> ... appears to be possible and her suggestion  
for the on-verse of 1. 1, <woa wykvest> bu me, also seems reason-
able. Hall's alternative suggestion, lob were, is unlikely; the  
letter in woa that Ricciardi takes to be a w, i.e., w--its descender  
is partially obscured--is almost certainly not an l.

4-11. On the *ubi sunt* theme in OE, see J. E. Cross, "Ubi Sunt Passages in Old English -- Sources and Relationships," *Vetenskaps-Societetens i Lund Arbok* (1956), pp. 25-44. Woolf, p. 96, is of the opinion that *quid profuit* would be a more accurate designation of this type of passage than *ubi sunt*.

4. *be<>*: Part of the *o* is still visible, but Phillipps prints *be* as does Singer.

5. *<paynewes>*: This reconstruction is suggested by Holthausen and adopted by both Hall and Ricciardi. Cf. "Latest Day," A., l. 45, "Wet boit bine ponewes." Another possible spelling is *<pe>newes*.

7. Though he himself prints the MS. version, Hall states that *guldene* and *golden* is a corruption of *glyden* "glied" and that *comen* is a gloss on *guldene/glyden*. He suggests emending the off-verse to *be glyden to bine honden* by analogy with "Latest Day" B., l. 54, "Hwer beo bine nappes bat be glideb to honde?" This change is adopted by Ricciardi. There is clearly corruption here, but while Hall's suggestion makes fine sense, it is not without difficulties. One must wonder why *comen* should be written after, rather than over, the word to which it is a gloss and why it should be separated by a point from that word. Indeed, the points after *goldfret*, *guldene*, and *honden* may indicate the omission of words--at least one verse--as has happened elsewhere in the poem. Also, one might expect *glyden* to be spelt *gluden* since OE */γ/* is predominantly written *u* in the poem, though the MED does not record a form of *gliden* with the root vowel written *u*. *goldfret* may mean
"golden," rendering the troublesome guldene redundant; however, it could also be a survival of the OE poetical goldfast meaning "golden vessel."

8. **agon:** Singer has **igon**. Haufe believes **fornon** derives from OE formean "near"; Hall says it is a contraction of foran an meaning "before, to come." See OED forne, 3b, "before, in front of."
   Cf. 11. D(B)44, F(D)40.

10. Hall adds **sibbe** to the on-verse which is otherwise deficient.
    Ricciardi expands this to **be sibbe** as the omission is probably an example of homoeoteleuton, i.e., the scribe omitted **sibbe** due to the repetition of **be** in the line.

12. **heom:** Phillipps prints **heo** in. Regarding **pubte,** see Introduction II i 45.

13. **<wren:** Haufe has **<we>ren.**

14. Singer prints **delib** and **imang:** he follows Phillipps in the latter case. In his corrections Buchholz proposes to change the reconstruction **<heo>** to **<heo hit>,** but don here has the meaning "to put, bring" as it did in OE; see BT Supp. **don, 4. be** is the direct object and **wiputren** is an adverb: "they put you without." Furthermore, **heo hit** is too long for the gap in the MS. The earliest instance of do without, i.e., "to get on without, dispense with," is 1713, according to the OED.

16. **b<ring>gen:** Singer reconstructs **b<er>gen.**

18. **semdest:** Singer **emends to scendest.** **f<ron>:** Singer and Haufe have **for>**; Buchholz and subsequent editors have **forbon** by analogy with 1. A10. **semdest** from OE siman "to load, place a
burden on."

19. The point in the MS. between seoruhfulne and buc would appear to be a scribal error.

20. Singer, Hall, and Ricciardi reconstruct bu<lo>xien here and would have the verse translated "you would not look to, i.e., take heed of, love." Haufe has bu <maxkien, though he himself finds it unsatisfactory; Buchholz expands Haufe's suggestion to bu<fe makien, which is rather long. Makien lufe, "to make love" is unattested in English before the 16th century—it is for this reason that Hall rejects it—but lokien lufe is itself rather obscure in this context. The phrase intended in all probability is makien lof "to praise" a common eME construction, e.g., Brut 8376, scullen alle mine Brutes . lidon to Lundene, & ber lof makien ure lauerd Appollin. See MED maken, 8a(c). It is conceivable that the spelling lufe has been caused by confusion with "love," i.e., OE lufu, as indicated in the MED lof. It is emended here for the sake of clarity.

23. Choi<re messe: Phillipps prints reipesse, and Singer attempts no reconstruction. biddan likely means "to pray" in this context; see BT Supp., 25r and MED, 2. According to the MED citation, for, as opposed to for, is used as a preposition only in regard to spatial relations; according to Mustanoja, pp. 377-78, however, the distinction was not so pronounced in either the OE or ME periods. Therefore, for in both ll. 21 and 23 can be construed as a preposition meaning "in the place, instead of."

24. leofli<cche>: Singer, Hall, and Ricciardi have leofli<che: Haufe
has leofli<ch>; Buchholz, leofli<ch>. The OE adjectival suffix -lic is written liche in all instances in the poem but two—sellic, l. C(G)27, and probably reoulic, l. B(F)19. However, -che may be a little long for the gap in the MS.

25. Phillipps prints deorwurpe as two words. Singer has swup deor burpe lac for the on-verse; he translates it "through the most dear sacrifice."

26. Bære: Haufe and Buchholz accept the MS. reading but for different reasons. Haufe believes it is a masc. gen. pl. form referring to men, l. 20; Buchholz believes it is a fem. gen. sg. form referring to messe, l. 23. As Hall points out, burh + gen. is very rare in ME, and the antecedent in this case is rather far removed from the pronoun if either Haufe or Buchholz are correct. Zupitza, p. 79, suggests the antecedent is cristes in the previous line and recommends emendation to the masc. bane, a change accepted by both Hall and Ricciardi. If one were to accept this emendation, it is more probable that licame, not cristes, would be the antecedent in question: if it were cristes, one would expect him, not bane. The MS. reading need not be abandoned, however. Bære, as Hall concedes, can be dative as well as genitive, and its antecedent, as Hall does not notice, can be the fem. sg. lac of the previous line. Also militating against the change proposed by Zupitza is the fact that bane does not occur elsewhere in the poem; the masc. dat. sg. demonstrative pronoun is always bane, the acc. form is always bane.

The mood of bære is probably subjunctive.

There is a point in the MS. after were, and both Singer and
Hall accept this division of the line. However, as in 1. B(F)28, this division causes an auxiliary to be separated from the participle that follows it—an unlikely situation. Including alesed in the on-verse renders it stronger metrically and does not cause the off-verse to be deficient.

28. we<cre>: Singer has we<ren>. The verses in this line are not separated by a point in the MS. The mood of were is probably subjunctive.

29. de<ofles>: There is a crease in the leaf at this point. Regarding fenge to, see MED fon, 2, "to succeed to, inherit." Cf. 1. C(G)14.

31. Remotely similar biblical passages occur at Prov. 11, 28 and Eccl. 5, 9, but Hall suggests the line is an "imperfect reminiscence" of "Qui enim divitiarum servus est, divitias custodit ut servus," Bedae Opera (1612), v, col. 378. "He who gathers riches is the slave of riches."

33. Singer divides this line into three verses: noldest bu nouht/ beorof d<alen>/for Drihtenes willan. The point in the MS. has been lost. <alen>: All editors print d<alen>, but what remains of the letter following d would indicate that it was more likely an e or o, than an a. For this reason, and for reasons of length, delen seems preferable here, though dalen would be the more usual spelling; cf. 1: D(B)16, but also 1. E(C)32. See also 1. E(C)11.

35. forlorn fr<on>, i.e., "removed from"; see MED from, 5a, in prepositional phrases construed with verbs ... denoting "separation, removal, etc."

36. <weopwe>: Singer has <ech> we "eternal woe."
38. nu ham <puncher>: Phillipps prints har; Haufe and Hall both note that the MS. reads han. The last part of the m in ham has been cut away.

39. be<on>: Singer's reconstruction, be<grafen>, is almost certainly too long. All other editors print beon by analogy with l. 5 of "The Grave": "Nu me be bringan ber &u beon scealt."

41. <bet ber>: Singer has al<le bat>. bet could have been written as an abbreviation, i.e., ♢ in this instance.

42. fules<e> qualeholde: This is a puzzling verse. Singer prints fuweles quale holde and translates "of the foul dead carcase." Haufe and Buchholz both print qualeholde, a compound, and Buchholz offers the translation "dem Töde holde Vögel," i.e., "birds friendly to death" which Hall rejects as "a flight of imagination beyond our writer's power." Though he himself prints the MS. version, Hall suggests, by analogy with ll. E(C)41, G(E)5, and G(E)7, that fules alre holde, "foulest of all bodies," is the correct reading. His suggestion is adopted by Ricciardi. However, while fuweles would indeed appear to be a corruption of fulest, the unique qualeholde need not be rejected. A similar compound, qualehus "torture house" occurs twice in Brut, ll. 727 and 3770, and it seems conceivable that what to the body was wurpest "most honourable" would be to the soul "the foulest torture-body." This is less prosaic than Hall's suggestion and admittedly a little unusual for this poet, but there is some
evidence in the poem, e.g., dreamburles, l. G(E)30, for unusual and, perhaps, original compounds of which this could very well be one. icwemdest: Haufe's icwemdest is probably a misprint as Buchholz indicates.

43. <pære>: Singer reconstructs <künde> "kind" here and is followed by both Haufe and Buchholz. However, the vertical stroke that remains after aire descends below the line, a fact that rules k out as a possibility and makes p likely. Hall prints pære as doe Ricciardi.

44-45. Cf. ll. F(D)40-41. <næffre> by analogy with effre in the on-verse; nefre is the more usual form.

Fragment E(C), f. 64v

1-3. The tops of the letters of the first line on f. 64v are missing. All the editors offer bunchep·bet by hire as the reconstruction of the first four words. Phillipps reconstructs the next word as bileiben and Singer accepts this, translating "remain." Haufe prints b·ei·en in his text but .ei·en in both his note and his Anglia article: Buchholz prints .e·en. Ricciardi offers bilefdest which seems somewhat more probable than bileiben paleographically. Certainty cannot be achieved here, but cf. 1. E(C)34.

All editors reconstruct the second line get sæip þeo sowle sorliche to þen lichame by analogy with 1. F(D)26. Nevertheless, it is clear in the MS. that sowle lacks an l. The last word on
the first line of f. 54 is printed sa by Phillipps, and Singer, following him, reconstructs the on-verse of the third line sa, <ne beart bu on stirrope, "see, thou canst not on stirrup." Subsequent editors have construed the last word in the first line of the leaf as ne and reconstructed the verse ne beart bu on stirrope.

3. On the significance of the horse-and-rider image in the later ME soul and body poem, "Als y lay in a winters niʒt" see Sister Mary Ursula Vogel's Some Aspects of the Horse and Rider Analogy in "The Debate between the Body and the Soul" (Washington: Catholic University, 1948). She does not mention this passage in the "Soul's Address."

5. ruglunge, i.e., "backwards," from OE hrycg "back".

6. ut<l>se>]: Singer has ut<sco>}. Buchholz prints the off-verse of this line in parentheses as does Ricciardi: riden, 1. 7, appears to be parallel with riden, 1. 5, and not cumen, 1. 6.

7. <bonne>: Singer prints <nu all>ε, but the letter before the remaining e could not have been an l; it might have been an h, n, or w, as Ricciardi points out. She prints <so>e in her text but suggests niwe as another possibility; a stronger alternative is bonne meaning "when," though it might be considered too long for the gap in the MS. Haufe attempted no reconstruction for this gap; Buchholz reconstructs <seorulich>ε by analogy with 1. A22, but this is much too long for the space available.

8. at]: MS ac. Singer and Haufe retain the MS. reading which does not give good sense. Buchholz emends to at and is followed by
Ricciardi; the MED indicates bireven of (at) is a common ME construction. Perhaps o was accidently written for t in this case; see Jordan 17 rem. 1 and cf. blecsien, 1. F(D)13.

10. In the MS. there are points after *er, 1. 9, and *eila, 1. 10, but no point after *eolen, which would seem to be the last word in the on-verse of 1. 10. Singer includes nu her from 1. 9 in a verse with *eila and prints and his *eolen beop her belafed as a single verse. Ricciardi conjectures that an omission has occurred after *eila, but she, along with the other editors, prints that word with and his *eolen as the on-verse of 1. 10, leaving nu her in 1. 9. If there has been an omission, it has not damaged the sense of the passage. It is possible that the point that should have been after *eolen has been misplaced after the somewhat similar *eila. Ricciardi alone prints *eolan; the MS. appears to read *eolen.

12-13. Zupitza, pp. 79-80, argues that the antecedent of the plural heo in 1. 13 is *bine *eonde, 1. 12, and that *bine *eonde is not likely to be dative plural. Therefore, he rejects the reconstruction of Haufe and Buchholz for 1. 12, *garsu*um cen, and prefers Singer's *garsu*umen. It is not strictly necessary that heo refer to *eonde, however; also, if *garsu*um, the pl. form, is accepted, a problem is created by its relation to the sg. hit of 1. 13. Ricciardi believes a preposition might well be expected here--fra rather than on--but rejects one on the basis of length. She prints *garsu*uman, though the weakened -en ending would perhaps be more likely in this form. *nimn gete means "to take care"; see MED *gere.
Zupitza also argues that biȝete meaning "acquire," l. 13, is a preterite form; Buchholz and Ricciardi believe it is present subjunctive, a reading which does seem preferable in the context.

14. <weīlawei>: Singer alone reconstructs the word <weīlawei>. Cf. 1. C(G)3, 1. D(B)19, and 1. E(C)10.

15. reowliche: Haufe prints reowlich. Phillipps prints a colon between the two verses of this line.

17. <pu>: All the previous editors view the off-verse of this line as a relative clause dependent on the on-verse. Singer and Haufe reconstructs <pe> therefore, and Buchholz expands this to <pe pu> in order to provide the 2nd sg. lettest with a subject. Ricciardi returns to the reconstruction <pe> but emends lettest to 3rd sg. lettet: "...your mouth is closed which let ouy injury."

Emendation can be avoided by reconstructing <pu> for the damaged portion of the MS. and by viewing the off-verse of the line as a nondependent clause: "the men are blither, who struggled with you before, that your mouth is closed: you let out injury, that sorely offended them, that made them frightened of you." teone appears to have moved from the masc. to the fem. gender at this point; in l. 19 it is masc.

18. Phillipps prints be he heom sore; Singer, be he heom sore. There is a point after groś for no apparent reason.

19. <deap>: Singer has <deap>.

20. <beo>: Haufe prints <eō>, Buchholz, <beo>. The singular <beo> supplied by Ricciardi is required for agreement with ben, unless the OE ablaut dat. has survived, in which case beo would be.
acceptable.

21. "Your mouth was overflowing with wickedness." Ps. 49(50), 19:

_Os tuum abundavit malitia._

22. _ripe:_ Ms. _ripe._ Zupitza, p. 80, and Holthausen both suggest emending the MS. _ripe_ "ripe" to _rife_ "abundant" and this is accepted by Ricciardi. _rife_ provides a more prosaic reading and is perhaps defensible on that ground, but it is not strictly necessary. The corresponding word in the OE psalters is usually a form of the verb _nyhtsumian_ "to suffice, abound."

27. Buchholz translates _be sulfen_ as an accusative, "Nicht erkannest du dich selbst"; Zupitza, p. 80, and Ricciardi claim it is more likely dative, i.e., "you did not acknowledge to yourself."

28. _<wuxplen:_ Phillipps neglects to print the _nien_ visible in the text; Singer reconstructs _<husien>._ _beprungen_ occurs only in verse in OE. "Now you have a new house; (you are) encircled within."

30. There is a crease in the leaf that has caused some letters to be obscured. One of these is the sixth letter of _helewawes_ "endwalls." Phillipps prints _helewawes_ and is followed by Singer; Haufe, Buchholz, and Ricciardi print _helewawes_; cf. _sidewes_ in the off-verse. The letter seems more likely to be an _e_ than an _o_, however. Cf. "The Grave," l. 9, _"Be helewawes beo9 laxe, sidwages unhege."_

31. _<loch:_ The _h_ is very distinct in the MS. Phillipps, however,
prints ... i and Singer reconstructs <nei> "near" which Haufe expands to <neih> to take account of the MS. reading. Buchholz also has neih and this completion would seem to follow from the similar l. 10 of "The Grave," "pe rof bió ibyld pire broste ful neh." Ricciardi, nevertheless, prefers the alternative reconstruction, loh, that Buchholz suggests in his note, as it gives the line the alliteration it otherwise lacks. In the MS., there is no point separating the verses of this line.

32-33. The crease that affects l. 30, as well as l. D(B)29, also causes the word colde to be very distorted, and a small hole partially obliterate the i of is. Phillipps misreads bideled and prints bicled and is followed in this by Singer. Phillipps also leaves out the point in the MS. between bideled/bicled and nullep. Singer attempts no reconstruction in l. 33.

35. onhor<de> h<eo> hit: Phillipps prints on hor/... peo hit and Singer reconstructs the passage on hor<de>/peo hit and translates the line "that," i.e., that which, "thou hadst in hoard they will keep it." Haufe claims, however, that what Phillipps took to be peo is, in fact, -ed; he offers the reconstruction onhor<de> hit and Buchholz accepts his view. Ricciardi correctly points out, however, that the second letter of the MS. line is very likely an o with an indistinct mark over it that has the appearance of an ascender of a d. Also, the single letter reconstruction proposed by Haufe and Buchholz is very short for the space available; and further, there is no point before hit indicating the verse division Haufe proposes. Ricciardi's alternative proposal is onhorded heo
hit; one would expect the personal pronoun heo, especially since its antecedent is animate, i.e., hinen, l. 33.

36. iwitan: Haufe emends to iwiten. He also has a question mark after this line.

37. <ageb>: Singer's reconstruction, <reowliche>, is far too long for the space available; <is>, proposed by both Haufe and Buchholz, is not justified paleographically: the remains of the letter before nu probably belong to a p, certainly not to an s. Ricciardi prints ageb by analogy with l. F(D)42 but acknowledges that bip by analogy with l. F(D)9, would also be acceptable.

besiden is ambiguous. It could mean "in the sides": Buchholz translates the line "Dir sollen nun wachsen Würmer in den Seiten." It could also be an early occurrence of the preposition "beside" (Mustanoja, p. 369). Haufe and Buchholz print it as two words; in the MS. and the other editions it appears as one word.

39. <peo>: Singer reconstructs <pene>, but feond is nominative, not accusative; Haufe believes no reconstruction is necessary, but it is certain the gap in the MS. would have been filled. Buchholz offers peo, and this is accepted by Ricciardi.

40. <heom>: Singer has <heo>, but a dative is required. Ham is a conceivable alternative.

41. For heo of the on-verse, Phillipps prints he.

42. Phillipps prints bin for the MS. pione and is followed in this by Singer. Haufe places a full stop after agon, but this does not seem probable syntactically, i.e., the on-verse depends on the off-
verse.

43. armes: All editors prior to Ricciardi print armes. The MS. reads armes, however, though the a and r are crowded rather closely together.

44. b(uru)h. MS. p. Phillipps expands this contraction to be and is followed in this by Singer.

45. <heo creopeb: Singer, following Phillipps, reconstructs <heo> reopeb in and ut and translates it "they rove in and out." His suggestion is accepted by both Haufe and Buchholz, though the latter translates reopeb as "rudern," i.e., "row." However, Zupitza, p. 80, argues that "rowing" would be a very unusual term to apply to the movement of worms; he suggests that the w, i.e., p, of reopeb is, in fact, a p and that the correct reconstruction is heo creopeb. Ricciardi accepts this suggestion. The MS. is quite unambiguous: the letter in question is a p.

46. pi<ne wom>be: Singer has bi <wom>be; all other editors, pime wombe.

48. lihte, i.e., "lungs."

49. milte probably means "spleen" in this instance since lungs have already been mentioned in l. 48.

50. Phillipps, followed by Singer, prints and so scal win as the final words on this leaf; Haufe and Buchholz print and so scal bin which does seem more probable. Ricciardi adds to this the beginning of another word: i with a tilde over it followed, perhaps, by a w.
1a-1. Only the bottom portion of letters in the first line on f. 63\(^r\)
remains. Ricciardi prints was...ond....efre binra ...

by scalt nu..... wurmes of bine flæsce for the first two lines of
the fragment, and, therefore, her lineation in this fragment is one
number greater than in the other editions. In line 1a she appears
to be correct regarding the words efre binra (more of the letters
remain from those words than others in the line), but her
estimation of the other words and the number of letters in the line
is more conjectural. Her construction for the on-verse of 1. 1
is not only acceptable paleographically but also strengthened by
the repetitions of by scalt in ll. 2 and 3. The word missing from
this verse likely begins with an f to establish alliteration with
flæsce; it does not begin with a w to establish alliteration with
\(<\text{wur}\text{mes}\) as there is no descender from it. There are 8-10 letters
at the beginning of the first MS. line, some or all of which must
belong to another line of poetry. They cannot be distinguished,
however. The second MS. line begins with -mes of wurmes, 1. 1.

2. The mood of beo is subjunctive.

3. unhol offers some difficulties. Buchhplz translates the word
"unrein," but Zupitza, p. 80, contends that "krank" is the only
legitimate translation available; he recommends accepting Haufe's
suggested emendation of unholl "sick" to unholde "hostile."
Ricciardi defends the MS. reading on the basis of a rare meaning
for unholl "causing sickness" that occurs in the Ancrene Riwle.
It seems more probable, however, that the verse is related to
Beowulf 120b, 

"wihte unholo, which Klaeber translates "creature of evil." Phonologically, the development \( \ddot{a} \rightarrow \ddot{o} \) would not appear defensible, but the primary meaning of OE unhol "sickness, unsoundness" may have caused it to become confused with unhol "sick, ill, weak" from which the form in l. 3 would appear to derive. Certainly the translation of unhol as "evil" is preferable in this context to either "sick" or "causing sickness."

4. **goede <del>del</del>lan**: Singer's completion, goede <del>sel</del>lan, "give goods," is not an impossibility, but delan occurs elsewhere in the poem, e.g., l. D(B)14, and is frequently found in OE verse in combination with articles of value, e.g., fretwa delan, "Genesis" 2830b, and bringas delan, Beowulf 1970a. The form god might be considered preferable from the point of view of length, but sg. gode does appear in l. F(D)41. Ricciardi treats this line as parenthetical, oddly placed within the description of the worms' activity; however, she notes correctly the ironic parallel between the "hoard" of the body, which it would not share, and the hord of the worms in the following line, which is vigorously worked. If men is pl., one would expect godum rather than gode in the on-verse; men may be, therefore, a survival of the dat. sg. ablaut form from OE.

5. **wulleb**: MS. wulleb wulleb. Dittography.

6. **<del>ulleb</del>**: Phillipps prints m.... and Singer reconstructs moton. Haufe's wulleb is accepted by both Buchholz and Ricciardi; it is syntactically superior and paleographically sound.

7. **grennien of[.....]**: Singer prints ac bu scalt grisliche grennien /<del>pat</del> hwo so hit iseige. However, there is a point in the MS.
after *grisliche* and no point after *grennien* so that what is missing *f* all likelihood belongs to the off-verse of l. 7 of which *grennien* is the first word. Haufe, who says the letter following *grennien* must be an *a*, offers *grennien* and *gristbitien* by analogy with "Juliana," l. 596; Buchholz accepts this reconstruction but it is clearly too long for the space available. Zupitza's alternative suggestion, *mid tep*, p. 80, is appropriate in length, despite Ricciardi's view to the contrary, but must be ruled out on the basis of paleography along with the more usual ME construction, *wip tep*: the letter after *grennien*—which almost wholly remains—is in all probability an *o* though *a* is possible, and certainly not either an *m* or an *w*. Ricciardi offers no reconstruction herself but does suggest an adverbial phrase such as *ofer al* or *on al* might be acceptable. Alternatively, a phrase such as *on eorbe* would fit, but, until a similar passage comes to light, one is reduced to guesswork.

11. *heo me*: Singer has *heo me*; Haufe and Buchholz, *heo me*.

Zupitza, p. 80, suggests *heo me* *lobre* by analogy with l. E(C)16, *beo men bab be blibre*; Ricciardi prefers *heom* for paleographical reasons: the remains of the letter following *h* are unlikely to belong to an *a*.

12. *weges*: Philippus prints *p*... and Singer reconstructs *pedas* "vestments." In fact, what remains are *p*, i.e., a *w* and part of another letter which was either an *o* or an *e*. Haufe reconstructs
which Buchholz changes to \textit{wædeo} by analogy with \textit{ll. D(B)9} and \textit{G(E)10}. Zupitza, pp. 80-1, concludes from the context that \textit{wæalles} is a more probable reconstruction, and Ricciardi accepts this proposal but alters the spelling to \textit{wawes} by analogy with \textit{1. E(C)30}, i.e., \textit{sidowes}. However, in the same line helewewes occurs. If "holy water" in the on-verse was, in fact, two separate words (they are so printed by the previous editors), it is certain that \texttt{holi} would end in -\texttt{e} to mark the dative case; cf. \textit{ll. B(F)43} and \textit{C(G)40}. Apparently "holy water" was still considered a compound in this work as it was in OE.

13. blecsien. Buchholz and Ricciardi emend \textit{blecsien} to the usual OE form, \textit{bletsien}; often, as Ricciardi points out, the orthographically similar \texttt{c} and \texttt{t} were confused in ME (Jordan 17 rem. 1); cf. \textit{l. E(C)8}. However, as the MED citations for \textit{blessen} show, early 13th-century forms of the word, frequently are written with a \texttt{c}: e.g., \textit{Hoo hef up hire hond & blecede al hire bodi wió be taken of be holi rode}, St. Marg. (1), 18/22; \textit{From all uule he scal blecen us}, \textit{OEH}, 57/58. It would appear that the phoneme /\texttt{s}/ could be graphemically represented by \texttt{c} at this time and /\texttt{ss}/ by \texttt{sc}, e.g., \textit{iblesced}, \textit{Vices} and \textit{V(i)}, 51/18. \textit{Blecsien}, then, could be a representation of OE \textit{bletsien} after the assimilation of \texttt{ts} to \texttt{ss}. It does not seem likely that \texttt{cs} could represent a transitional phonological stage in the assimilation process. See Introduction II i 36. \textit{Brenwen hæn}, i.e., "to guard themselves" against, from OE \textit{becorgan} with a reflexive dative.

14. \textit{becornen}: Singer has \textit{bærenen}, but see \textit{l. G(E)49}. 
16. re<owlíche>: Haufe reconstructs re<owlích>, but OE -lia never occurs written -lich in the poem. The shorter reowlíc may be preferable here; cf. 1. B(F)19.

18-23. Buchholz treats this passage as a series of five questions. Zupitza, p. 81, concedes that l. 19 may be a question but doubts that either ll. 20 or 21 should be so viewed. Ricciardi places question marks after ll. 22 and 23-4 only. Nevertheless, given the fact that l. 19 might be a question and that ll. 22 and 23-4 are, the possibility must be entertained that ll. 20 and 21 are questions as well: the finite verb in both cases is in initial position, the usual situation for interrogative statements, and the initial negative of l. 22 is quite possibly to be seen as parallel to the initial negative forms in the preceding two lines.

18. <wen>dest: Singer has <nol>dest. It would appear that pointing has been used in the MS. here to draw attention to the adverb o "ever, always," perhaps in an effort to distinguish it from adjacent words. The MS. reads erming, la her o to wumienne.

19. icoren<hit>: icoren, the pret. part. of OE ceosan "to choose" would appear to require an object that is not supplied in what remains of l. 19. Ricciardi, following Zupitza, p. 81, takes this object to be 18b her o to wumienne, i.e., "...you had not chosen always to be living here." Buchholz's translation, "War es dir nicht natürlich, was du erwähnt hattest?" only obscures the identity of this object. Haufe admits difficulty with this line and suggests that something more than the n of icoren might be missing from the text, a suggestion no doubt inspired by Singer's
reconstruction, *icoren me*, which Haufe neglects to mention in his note. Singer translates the line "it was no whit known to thee that thou hadst chosen me." The problem with this translation is the misinterpretation of *icund(e)* as the pret. part. of *cunn(e)* "to know"; it is almost certainly related to OE *cynde*. Buchholz translates the word "natürlich," a meaning rejected by both Zupitza and Ricciardi. The latter translates the word "innate," which is not obviously better. It is possible that the word, as in l. A32, has a moral connotation, i.e., "fitting, proper," along with the more neutral "natural, innate," and this possibility is strengthened by the statement in 19b that the body has "chosen" something or other. The Zupitza suggestion, that this object of selection is represented by the phrase in 18b, seems the best available, but it would appear, nevertheless, that something more than the *ni* of *icoren* is required to fill the gap in the MS.

20. A line with rhyme, *pe/be*, and a rather long off-verse is created if one follows the MS. pointing here. Alternatively, *more* could be placed in the on-verse in order to create balance between the verses.

21. Phillips prints *is* instead of *ic* and is followed in this by Singer, who also supplies the reconstruction <*eige*] "eye" for the damaged portion of the MS. Haufe rejects this reconstruction without comment and offers none of his own; Wissmann, p. 92, proposes <*eigen*] which is accepted by subsequent editors. From her note it would appear that *eigen* is the form Ricciardi prefers, but *eigen* appears in her text; either spelling is possible, cf.
11. A17 and A42.

22. hi: Buchholz emends the MS. hi to hit. Hi does occur as an accusative plural, however, in 1. D(B)14 and it may refer here to the cumme of 1. 20 who are also the fordfaderes of 1. 23.

23. fordfaderes: The MS. appears to read binef; Phillipps prints fordf. . . ; Singer reconstructs fordfceren which he translates "forefathers"; Haufe emends to forfaderes and is followed by both Buchholz and Ricciardi. The adverb forf is occasionally spelled ford, however, and does occur so spelled as a loosely connected prefix in the word forddanes, see MED forbdases. It does not seem necessary to reject the MS. reading, therefore.

25. isceed hore: Phillipps prints is... and Singer reconstructs isceorf hore; Haufe alters and shortens this to isceed by analogy with 1. F(D)36; Buchholz expands Haufe's reconstruction to isceed hore which is accepted by Ricciardi. In her note to this line, Ricciardi finds it odd that the worms would be described as having "wrought sin." However, Buchholz is clearly correct in seeing bones of the on-verse as the referent of the in the off-verse and bao as the definite article, i.e., "the worms have dismembered them, confounded their sorrowful bones which wrought sin."

26. i<chame>: Singer has li<chame>.

28. Cf. 1. D(B)2.

28- lufede<st> mid pine: Singer has lufede<st> and; Haufe, lufede<st> purh pine by analogy with 1. B(f)14; Buchholz and Ricciardi, lufedast mid pine by analogy with the following line, i.e., because of the repetition of mid.
30-1 There appears to be an i jammed between wurst and mihtest in 1.30. Magnification reveals, however, that this stroke was likely an errant first stroke of an m that has been left unerased. Singer's reconstruction for the damaged portion here is simply <ic was>; Haufe has mihte<st/ic was>. Buchholz changes was to com for the sake of alliteration but Ricciardi prefers was in order to provide isend with an auxiliary. (In l. E(C)29, however, the pret. part. biprunen occurs, apparently without an auxiliary.) The MS. pointing indicates that clene should be placed in the on-verse, but it seems preferable that it be moved to initial position in the off-verse, a change that provides a more even distribution of the stressed words in the line.

33. be is an example of an ethical dative (Mustanoja, pp. 99-100).

34. ha<fed>: Phillipps prints ha ...; Singer reconstructs ha<uede>; the other editors print harde. The root vowel in the preterite forms of habben is either e or a in this poem, and the former is clearly ruled out in this case.

36. <was>/Singer has <bu>; P, i.e., w, can be made out after wulder.

38. bi<nu>men. Phillipps prints bu ...; Singer has binumen. isold on hond, i.e., "given into the possession of."

40. bi<py>: This reconstruction is very short. It is possible that a short word such as mu or bus has also been lost, but cf. l. D(B)45.

44. long<e po>lode: Singer offers no reconstruction here; Haufe and Buchholz print long<e wape>lade which does not make particularly good sense. Zupitza, p. 81, suggests long<e dwe>lade but acknowledges that it too is unlikely. Kaluza's suggestion, longe
spared, p. 16, does not take account of the -lede that remains in the MS. Holthausen's suggestions, longe bolede and longe gilede, are both superior to the others made. Ricciardi prefers bolede from OE bolian "to suffer (a person), bear with, tolerate" (see BT bolian, 2). Which does provide adequate sense. gilede "beguiled" is a possibility, but it perhaps makes its way into the English language too late to be considered for this poem; its earliest recorded occurrence is in the Ancrane Riwle.

45. <were>: Singer offers no reconstruction here. Haufe's proposal, <makedest>, is accepted by Buchholz by analogy with Brut 1.11457, but Ricciardi is almost certainly correct in thinking it too long for the space available. Her alternative reconstruction is <scerp>. unseihnte need not be a substantive meaning "hostility," however; it could be an adjective meaning "hostile" and the missing word could simply be were.

47. huned: Phillipps prints hund as does Singer who offers no reconstruction here and no translation for hund. In the MS, it appears that an e has been squeezed in between the n and d and all editors since Haufe print huned the pret. part. of OE hienan meaning, in this case, "to accuse, condemn." Ricciardi notes the MS. might read hined, but this form would be difficult to explain. Singer follows the MS. pointing and divides this line into three verses: bu were wedlowe / and monsware / and * * * hund inouh.

49. The damage to this line is more extensive than elsewhere on f. 65⁷ because the left-hand corner of the leaf is missing and, with it, the beginning of the last line of the fragment. Phillipps prints
Singer reconstructs the word and translates the line "for the devil taught thee all, chief full
nigh thy heart." Haufe's ford is too short; Buchholz offers no reconstruction. Ricciardi supplies a common ME phrase,
hord, a reconstruction which provides both a sense and alliteration but is not without problems. One would have
expected a point in the MS. after hord, and this reconstruction also places three stresses in the on-verse of the line.

Fragment G(E), f. 65v

1-2. The first line on f. 65v is partially cut away and the letters
the right-hand side of the leaf--the on-verse of 1. 2 and
probably some of the off-verse as well--are almost wholly missing.
The words bu nefre wurchen drihtenes in 1. 1 are quite distinct;
though Phillipps has burchen for wurchen; the word wille is
probably correct. In his Anglia article, Haufe suggests est as a reconstruction for the first word of the line, most of whose
letters remain, and this suggestion is adopted by both Buchholz
and Ricciardi. Singer reconstructs for what remains
of 1. 2 and is followed by the later editors; cf. 11. E(C)8 and
G(E)29.

4. tocome: Singer prints to come.

6. Ricciardi remarks in her note that bet, presumably the first one,
may be a corruption of another short word such as bus. This is
possible, but there is no reason to assume that bet is relative
pronoun as Ricciardi does; it can be simply a demonstrative pronoun used as a pronoun rather than a definite article: "but you befouled it with your foul body: that is that foul body removed from men." Singer reconstructs fuclnesse here.

7. There is no point separating the verses of this line.

8. Cf. D(B)40.

9. There is a point before (and) brostnian, and Singer prints this as a separate verse.

9. On the Signs of Decomposition in ME lyrics, see Woolf, pp. 94-5.

10. <of þær>: Singer has <from þær>, but see l. D(B)16, where of is used with bedælen. iwunedæ is the pret. part. of OE wunian and probably has the meaning "to be accustomed to, used to" in this passage. The position of to, as Ricciardi points out, is unusual; it probably should be taken with the relative be, i.e., "to which."

11- stil<le / ob>: Singer has stil / <ba>; Haufe and Ricciardi, stil<le / ob; Buchholz, stil<le / ac>. Either ob or ac is possible, but the former seems preferable. Cf. l. A21.

12- Ricciardi indicates by her punctuation that these lines are to be treated as parenthetical. They are not so obviously parenthetical in the alternative order of the fragments presented here, however.

13. domesdai: All the previous editors except Ricciardi print two separate words; Singer prints daie.

15. imesten is ambiguous: it could be either the strong, class V OE verb meaning "to repay, requite" or the weak, class I OE verb meaning "to meet, encounter."
17. <ne drea>me: Singer reconstructs the off-verse <non drea>me ihereb and translates "no pleasant sounds they hear"; Buchholz reconstructs the verse <heo none herunge> ne ihereb by analogy with l. 31. Ricciardi, however, follows Haufe's example and offers no reconstruction. She rejects Buchholz's proposal as too long, which it is, and Singer's for the same reason, which it might be. A further problem with Buchholz's reconstruction is that the letters which remain in the MS. are clearly me, not ne. Singer's suggestion has some merit, however, since in both l. 23 and l. 26 dream occurs as the object of heren, and in l. 30 the ears are called dreampurles. With an -e ending dream would be dative singular, but if heren has the meaning "to listen to" in this instance, it would take an object in the dative; the preposition to would not be necessary (see BT Supp. hiran, 4a, and MED heren, 4a(a)). dream also provides the line with alliteration, and the reconstruction <ne drea>me is similar in length to <deope>, the reconstruction accepted by all editors for l. 8 of this fragment.

19-20. wowe domes: Singer adds mid to the text before the words; Haufe prints them as a compound. Singer's reconstruction here is <feole / bu>. Cf. ii. C(G)11-2.

22. <weJ>: Singer has <deafle> which is paleographically impossible: the l remains; Haufe has <deofel> which Buchholz rejects for reasons of metre, i.e., the verse with this reconstruction would have three stressed words; however, there are certainly other verses in the poem with three apparently stressed words. Pe, which begins the line, is most likely a dative personal pronoun
rather than a relative pronoun, i.e., "for you (he) plucked his
harp well."

23. drihten f>ul lop: Phillipps prints .ul lop; Singer reconstructs
drihtene f>ul lop: Haufe prints drihtene f>ul lop; Buchholz
shortens drihtene to drihten by analogy with 1. C(G)50; it is
probably dative referring to God. Ricciardi emends he to be, a
relative pronoun whose antecedent is dream in the on-verse. This
change does render the line more typical syntactically of others
in the poem, but it is not strictly necessary. If one places a
full stop after dream (Buchholz has a colon), the MS. he can be
retained as a personal pronoun referring to the devil mentioned
in the previous two lines. One might also construe he as referring
to the masc. dream, i.e., "you heard the joy--it was to the lord
wholly loathsome--" though this is a less probable alternative.

24. sweige: Singer has sweize. There are points in the MS. after be,
sweige, and sleptest; Singer divides the line into three verses
accordingly. However, though the on-verse is rather long, it is
not overburdened metrically by the standards of this poem.

25. ... is be: Singer's completion, <n>is, changes the tense of the
passage abruptly and is also rather short; Wissmann's suggestion,
p. 42, <lob was>, is adopted by Buchholz but is paleographically
unlikely: the letter that remains or partially remains before g
is not an a; Ricciardi and Haufe both offer no reconstruction and
print ...is be. Ricciardi suggests let his be in her note to
this line, but without much conviction. It is possible that what
remains before the a is the left side of an n, less possibly, a u,
instead of an i.

27. **<bet un*ker**: Phillipps prints .i*ker*; Singer has <bat s>iker; Haufe, <be un*ker*, by analogy with the following line; Buchholz and Ricciardi have bet unker. **rungen** is the only unquestionable occurrence of an unprefixed pret. part. in the poem.

28. Ricciardi questions the agreement of the sg. lo*re* with the pl. were, but Buchholz is certainly correct in viewing were as singular subjunctive in this instance.

29. **<bet lut> beo**: Phillipps prints .bo*o* and Singer reconstructs the passage <and nu> be*o*. Haufe offers ob*e*o; Buchholz proposes to him, ne*o* beo, but concedes in his note that the h of heo may, in fact, be a b. The remains of the letter do look more like b than h, the bottom of the letter is missing but the right-hand side of the top portion which remains has the shape and the distance from the ascender more characteristic of the bow of a b than the second leg of an h. Ricciardi's reconstruction, bet lut beo i*old ahte, "so that little they had power over-you," does not provide the line with alliteration, but it gives adequate sense: beo refers to the holy alternatives to the devil's blandishments.

30. **dreamburles**, i.e., "soundholes, ears," is a hapax legomenon.

31. **<nefr>**: Singer and Buchholz reconstruct <ne> which is rather short; Ricciardi reconstructs <nu ne>; Haufe has saffre. Ricciardi's reconstruction is acceptable but Haufe's seems stronger. nefre is the usual spelling of the word in this poem; saffre occurs only once certainly, l. E(C)6. Haufe has a period after
32-3 scu<len>: Singer prints scullen / ∫rom, as does Ricciardi; Haufe and Buchholz have scu<len / ∫rom. sculen would appear to be the more likely form; what appears to be the remains of the top portion of two 1's after scu- is probably offset from another leaf.

34. Phillipps indicates a tilde over the n of bene. Singer's reconstruction for this line is <lauer>de.

35. ofeodes: Singer prints of eodest.

36. be get: Phillipps prints bet et, as does Singer; the letter is indistinct but does appear to be a 3.

38. biin: Phillipps prints him, a reading which could, in fact, be justified from the MS. The second minim after p could be taken either as an i or the first stroke of an m, but it is not exactly parallel with the two strokes that follow it—the three strokes of the m usually are. Singer emends to pine. Haufe emends what he says is biin or pin. Buchholz and Ricciardi accept biin; ii, a graphic representation of long i, also occurs in liip, l. E(C)31; see Introduction II i 8.

39. <nam>pare: Phillipps prints ..nare which Singer expands to mare. The letter before a is quite clearly m, not n; therefore, Haufe and Buchholz, who accept Singer's reconstruction, give no indication of anything being missing from the MS. Since the damage to f. 65⁷ is on the left-hand side, however, something must have been in the space between mare and what would have been the margin of the leaf. Ricciardi suggest <nam>pare; cf. l. A34.

40. <so hist: Singer and Haufe both print <be>t. Buchholz has <so he
hit, which Zupitza, p. 81, suggests be shortened to so hit since
the pronoun he is superfluous. Ricciardi's complaint that
Buchholz's reconstruction is too long is not necessarily just;
she follows Zupitza. Cf. 1. C(G)55, 1. D(B)30, and 1. G(E)45.

41. "They will give an account of their own deeds." Remotely similar
are Mat. 12, 36, 1 Pet. 4, 5, and Rom. 14, 12.

42. <sosyle: Phillipps prints ..eile; Singer reconstructs wxeile
"servants." Haufe has <fule; Buchholz, <sosyle.

43. As Ricciardi indicates, hit does not agree in number with deden,
the word to which it would appear to refer. It is perhaps
possible that hit refers to wisdome, though OE wisdom is masculine
in gender, i.e., "wisely through wisdom for the Lord knows it
(there knowing, wisdom)." Cf. the identical phrase at 1. B(F)48
where wisdom may have some theological connotation (VED wisdom,
lc).

44-5 Phillipps prints ..te tenes and Singer completes the gap in l. 45
with <drih>tenes. The repetition of the off-verse in these two
lines leads one to suspect ditography in l. 45 where there is
no alliteration. Ricciardi emends mube in l. 45 to write; a
stronger alternative is word which alliterates with awritten and
also retains the oral quality of mub. The MS. reading can be
defended semantically but, even though repetition is a key
stylistic feature in this poem, identical verses are almost always
separated from each other by at least one line.

46. "Go, you cursed ones, into the eternal fire." Cf. Mat. 25, 41:
"Discredite a me maladicti in ignem aeternum."
48-9 Phillipps misses the point separating these lines. Singer
reconstructs the lost portion <ex>fre; Haufe, <ex>fre; Buchholz,
<per ex>fre which balances per nefre of the off-verse and is of a
more probable length than the one letter reconstructions of Singer
and Haufe.

90. "And those who did good works will go into eternal life." Cf.
Mat. 25, 46: "Et ibunt hi in suiplicium aeternum: iusti autem in
vitam aeternam."

51. <scale>n: Singer has <go>n.

52. <mest>: Haufe reconstructs mest by analogy with 1. 47 and is
followed by both Buchholz and Ricciardi.
GLOSSARY

With the exception of a handful of very common words, the glossary is a complete presentation of the English forms in the poem. Not included are the Latin words of 11. B(F)2, B(F)44, B(F)49, C(G)20, C(G)35, C(G)56, D(B)31, E(C)21, G(E)41, G(E)46, G(E)50. Each of the entries in the glossary consists of four main parts: HEADWORD, GRAMMATICAL CATEGORY, DEFINITION, CITATION.

1. The Headwords are arranged alphabetically; a, g, and t are treated as separate letters after a, g, and t respectively. (However, words beginning with bi- or be- are all grouped under bi-; the prefix i- has been ignored in the alphabetical arrangement.) Unusual forms, i.e., ones orthographically remote from the chosen headword, are cross-referenced with that headword. Also, a number of similar words with separate entries are cross-referenced with one another, e.g., FUN and OFUN.

2. If a single headword represents more than one Grammatical Category, these categories are marked by Roman numerals, e.g., I adj. . . . . . . . II adv. . . . . . . . Nouns are marked by their gender distinction, i.e., masculine (m), feminine (f.), or neuter (n.). Verbs are indicated by the abbreviation v. followed by a designation of the verb class to which they belong. Clear abbreviations mark the other grammatical categories: adj. (adjective); pron. (pronoun), adv. (adverb), prep. (preposition), conj. (conjunction), num.
Some headwords have more than one definition, and, if these definitions for a single headword are sufficiently distinct from one another, each is marked by an Arabic numeral and grouped with the citations representative of it, e.g., prep., 1. at: . . . 2. of: . . .

The citations exemplifying a given definition or series of definitions form the final part of the entry. If no form appears before a line number, the headword is to be assumed. All reconstructed forms are marked as they are in the text; all emended forms are followed by the MS. form in brackets; all forms for which further information can be found in the explanatory notes are preceded by an asterisk (*).

A more detailed description of the style of entry for each grammatical category follows.

1. **Nouns.** The gender of a noun appears after the headword. Each citation is marked according to number, i.e., singular (s.) or plural (p.), and according to case, i.e., nominative (n.), accusative (a.), dative (d.), and genitive (g.). All singular forms appear first so that the sequence of citations moves from nominative singular (ns.) to genitive plural (gp.).

2. **Adjectives.** Besides number and case, each citation of an adjective includes a designation of gender, i.e., m., f., and n. All singular forms are given first; masculine forms precede feminine forms with neuter forms last; the order of cases, as with the nouns, is n., a., d., and g. The sequence of citations proceeds from nms. to gpn. Comparative forms (comp.) and superlative forms (supl.) occur
3. Pronouns. Pronouns are described, by and large, in the same manner as adjectives. The dual number occurs occasionally in the personal pronouns.

4. Verbs. After the headword and the abbreviation v., one of the following indications of verb class appears: an Arabic numeral indicating a strong verb class; a Roman numeral indicating a weak verb class; FP indicating a Preterite–Present verb; AN indicating an Anomalous verb. The citations are in the indicative mood, unless otherwise indicated. Their sequence is: infinitive (inf.); present forms, singular, then plural, in all three persons (is., 2s., 3s., 1p., 3p.; 2p. does not occur); preterite forms (pret. is., pret. 2s., etc.); subjunctive forms (subj. pres. and subj. pret.); imperative (imp.); present participle (prp.); past participle (pp.); negative forms (neg.).

5. Other forms—Adverbs, Prepositions, Conjunctions, Numbers, and Interjections—require no special attention.

Precision has been aimed for in the glossary, but much imprecision is unfortunately inevitable. The spellings of a number of headwords and some reconstructed words for lost portions of the text are conjectural and should be treated as probable alternatives rather than absolute certainties. In some cases, definitions or syntactical designations are ambiguous and the alternative possibilities have been given. Regarding definitions, one must, of course, be alive to the possibility of shades of meaning. Regarding syntax, it is clear that a form cannot be, for example, both singular and plural; however, if ambiguity exists, it is preferable to reveal the difficulty to the reader rather than to hazard
a guess on one option or another. Question marks precede questionable
definitions or syntactical designations. Regarding vowel quantity, see
Richard Jordan, 22-24 (Bibliography, Language, Comprehensive Studies).
Some imprecision exists here as well, however. Some class two weak
verbs, for example, retain the -i- of their OE forms; others do not.
The presence or absence of this vowel not only affects spelling, but
also the quantity of the preceding root vowel.
GLOSSARY

ā adv. always: C(G)25, ē F(D)18.

AC conj. 1. but: A5, B(F)13, B(F)28, etc.; 2. on the contrary, but rather: B(F)14, D(B)18, etc.; 3. moreover, and, also: B(F)32, D(B)15, etc.

ACWENCHEN v.I to subdue, overcome: inf. D(B)22.

ADŪMBIEN v.II to become dumb: pp. ADŪMBED B(F)16.

AFULEN v.I to defile, corrupt: 2s. AFULEST G(E)5.

AFÜRSEN v.II to remove, expel: pp. AFÜRSED G(E)6, G(E)37.

AGŌN v.N 1. (with BĒON) to be gone: inf. E(C)42; 2. (with BĒON) to be lost, vanished: inf. C(G)19, D(B)8, D(B)44, F(D)40; 3. to come to pass: 3s. AGED F(D)42, <AGED> E(C)37. Cf. GŌN, OFGŌN.

AŠĀN prep. before, in the presence of: E(C)18. See ON3EN.

AHTE v., see ĀWEN.

AL I adj., all: ns ṣn, <AL> B(F)28; dsf. ALRE D(B)43; gsf. ALRE G(E)7, G(E)47, G(E)52; nps ALLE A2; apmn. ALLE G(E)13, B(F)42, B(F)45, B(F)47; dpmf. ALLE B(F)17, D(B)37, G(E)37, C(G)24. III pron. all: nsn. AL B(F)46, D(B)41, F(D)50; ṣdsn. AL D(B)35, E(C)44; npf. ALLE B(F)21. IIII adv., utterly, entirely, completely: AL A27, A29, B(F)23, B(F)25, etc., ALL C(G)6, C(G)13, "ALL" B(F)33.

ALEGEN v.I, to quell, stop: pp. ALEGEND E(C)19. Cf. LEGGEN.

ALEID v., see ALEGEN.

ALMIHTĪ adj., almighty: nsm. B(F)36; gsm.*ALMIHTĪS B(F)41.

ALTOGEDERE adv., completely, entirely: B(F)14.

AMERREN v.I, to mar, destroy: pret. 2s. AMERDEST C(G)31.

AND conj., and: *A2, A3, A4, A7, etc. (written in the MS. as ɬ and ʃ).

ANDWWORK n., handiwork, creation: ds. ANDWORKE B(F)42.

AREREN v.I. 1. to raise, resurrect: 3s. ARERE G(E)12. 2. to cause discord, strife: pret. 2s. AREREDEST F(D)45.

3p. ARISEN E(C)15.

ASCORTIEN v.II, to become short, to fail: pp. ASCORSED C(G)9. Cf. SCORTIEN.

AT prep., see ĀT.

ATRUKIEN v.II to fail, ? deceive: pp. ATRUKIEN C(G)9. Cf. TRUKIEN.

ATTERN adj., poisonous: nsf. ATTERNE C(G)17.

ĀWEN v.PP., to have, possess: 2s. OHTEST E(C)8; pret. 3s. AHTE

G(E)2, G(E)29.

AWRITEN v.I, to write: pp. AWRITEN G(E)45. Cf. WRITEN.

ĀFRE, ĀFRE adv., see ĄFRE.

ĀFTER adv., see ĄFTER

ĀHTE n.; possessions collectively, property; a. D(B)13.

ĒR I adv., before: A37, B(F)40, C(G)30, C(G)44, etc. II prep. before:
